2007 Workshop on Computational Electromagnetics in Time-Domain

Perugia, Italy
15-17 October 2007

IEEE

IEEE Catalog Number:	CFP0712A-PRT
ISBN 10:	1-4244-1169-6
ISBN 13:	978-1-4244-1169-6

Table of Contents

FDTD Modelling of a Realistic Room for Through-the-Wall Radar Applications **1**
Walid A. Chamma

EM Pulse Transit across a Uniform Dielectric Slab **5**
J. A. Grzesik

Modeling and minimization of discretization error in one-dimensional PML's using FDTD **9**
J. M. Lopez-Villegas and N. Vidal

4D and 2D Finite-Integration Time-Domain Approaches for Pulses in Structures with Nondispersive and Dispersive Media **13**
Michael V. Davidovich

A least-squares implementation of the field integrated method to solve time domain electromagnetic problems **17**
Zhifeng Sheng, Rob Remis and Patrick Dewilde

A Novel Low-Dispersive (2,2) Finite Difference Method: 3-D Case **21**
Chakrapani Bommaraju and Rene Marklein

The Four-Vector Potential for Arbitrary Sources in Cylindrical Drift Tube **25**
G. Gorbyk and K. Ilyenko

Combining PSTD-Method and Transmission Matrices for Research of Planar Optical Metamaterials **29**
Vyacheslav V. Khardikov, Ekaterina O. Yarko and Sergey L. Prosvirnin

Parallel FDTD Calculation Efficiency on Computers with Shared Memory Architecture **33**
Tomasz Ciamulski, Mats Hjelm and Maciej Sypniewski

Positional Dependence of Mode Detection in FDTD based Photonic Crystal Simulations **37**
Glen Stark, Franck Robin, Matthew Mishrikey, Christian Hafner and Daniel Erni

An Investigation of the Accuracy of Finite-Volume Radial Domain Truncation Technique **41**
Krishnaswamy Sankaran, Christophe Fumeaux and Rudiger Vahldieck

Trillion Cell CAD Based Cartesian Mesh Generation for the Finite Difference Time Domain Method on a 4 Gigabyte Linux Workstation **45**
Jeff T. MacGillivray

Some Numerical Aspects of an Extension of the FDTD Method to Incorporate Magnetized Ferrites **49**
José A. Pereda, Ana Grande, Oscar González and Ángel Vegas

FDTD Analysis of EBG Superstrates **53**
F. Frezza, P. Nocito, L. Pajewski and G. Schettini

Late Time Stability and Accuracy of Ferrite FDTD Algorithms **57**
E. Okoniewska, D. Cyca and M. Okoniewski

Unified time domain calculation of microwave resonator parameters **61**
Ikuo Awai, Yangjun Zhang and Tetsuya Ishida

Investigating the Instabilities of the TLM Method Using a State-Space Approach **65**
Isar Mostafanezhad, Ali Banai and Forouhar Farzaneh

Method of Moments: A General Framework for Frequency- and Time-domain Numerical Methods **69**
Zhizhang (David) Chen and Michel M. Ney

Phase Response of Microstrip Reflectarray Elements by FDTD Analysis **73**
Kiyan Keyghobad and Homayoon Oraizi

New Alternating-Direction-Implicit Finite-Difference-Time-Domain Method for Photonic Crystal Devices **76**
S.S.A. Obayya and D Pinto

Multiresolution Time Domain analysis of optical guided-wave devices **80**
S.S.A. Obayya and R Letizia

Design Considerations of Power Splitters based Optical T-Waveguide Junctions **84**
S.S.A. Obayya and Gebriel A. Gannat

Accurate Two Dimension Finite Element Time Domain for Electromagnetic Acoustic Transducer **88**
S.S.A. Obayya, S. Thomas, T. Rajesh and W. Balachandran

Inclusion of Microstrip and Wire Circuits in the FDTD Method **92**
Chris J. Railton and Dominique L. Paul

Finite Volume Time Domain Method On TET & HEX Meshes **96**
Chakrapani Bommaraju, Wolfgang Ackermann and Thomas Weiland

Time-Domain Investigations of Periodic Rectangular Dipole Arrays **100**
Çagatay Uluisik, Ercan Topuz and Levent Sevgi

Transient Near Field Analysis of Optical Modes in Sub-wavelength Arrays **104**
N. Cinosi, S.P. Walker and M.J. Bluck

A Computationally Efficient Method in Inverse Scattering Using Fourier Series Expansion in Conjunction with FDTD and PSO **108**
Abbas Semnani and Manoochehr Kamyab

Investigation Of Higher Order Symplectic Time Integration Methods For Discontinous Galerkin Methods With a Centered Flux **112**
T. Lau, E. Gjonaj and T. Weiland

Survey of Temporal Basis Functions for Integral Equation Methods **116**
Amir Geranmayeh, Wolfgang Ackermann and Thomas Weiland

Review of an FDTD TF/SF Formulation Based on Auxiliary 1-D grids **120**
Panagiotis Kosmas

A Volterra Integral Equation Algorithm on Triangulated Space Time Meshes **124**
A. Al-Jarro, P. Sewell, TM Benson and A. Vukovic

Dispersion and Maximum Time Step of 2D ADI and CN ID-FDTD **128**
Hyun Kim, Woo-Tae Kim, Il-Suek Koh and Jong-Gwan Yook

A new hybrid Transmission Line Matrix-Finite Difference technique for the coupled Maxwell- Schrödinger problem in the full-wave characterization of nanodevices **132**
Luca Pierantoni, Davide Mencarelli and Tullio Rozzi

Analysis and Implementation of 3-D FDTD Method based on Isotropic Dispersion Scheme **136**
Woo-Tae Kim, Hyun Kim, Il-Suek Koh and Jong-Gwan Yook

Extracting Statistical Moments of Output Quantities from a Small Number of Time-Domain Simulations **140**
Leonardo de Menezes, Ajibola Ajayi, Christos Christopoulos, Phillip Sewell and Geovany A. Borges

A Leapfrog Formulation of the 3D ADI-FDTD Algorithm **144**
S. J. Cooke, M. Botton, T. M. Antonsen Jr. and B. Levush

Time-Domain Simulation of Electromagnetic Wave Propagation in Two-Level Dielectrics **148**
John Paul, Christos Christopoulos and David W. P. Thomas

Design and Modeling of Novel Multiband/Wideband Antennas for RFID Tags and Readers Using Time-/Frequency-Domain Simulators **152**
A.Traille, L.Yang, A.Rida, T.Wu and M.M.Tentzeris

FDTD Design of Antennas for Smart Applications: RF Triggering System Case-of-Study **155**
F. Alimenti, P. Mezzanotte, V. Palazzari, F. Placentino, A. Scarponi and L.Roselli

Investigation of the Impact of Magnetic Permeability and Loss of Magnetic Composite Materials on RFID and RF Passives Miniaturization **159**
Lara Martin, Daniela Staiculescu, Haiying Li, S.L. Ooi, C. P. Wong and Manos M. Tentzeris

Time-Domain Analysis with Self-Optimizing Prony Predictor for Accelerated Field-Based Design **163**
Hong-Son Chu and Wolfgang J. R. Hoefer

Advanced FDTD Applications **167**
Torleif Martin

The role of FDTD technique in exposure assessment of wireless communication devices **171**
Andrea Schiavoni

Trends of Commercial Time-Domain Electromagnetic Field Simulators **175**
Poman P.M. So
