

Proceedings of the

HPCMP USERS GROUP CONFERENCE 2007

June 18-21, 2007, Pittsburgh, Pennsylvania, USA

Los Alamitos, California

Washington • Tokyo

HPCMP USERS GROUP CONFERENCE 2007 POST-PROCEEDINGS

TABLE OF CONTENTS

Editors Preface _____	x
Abstract Authors Index _____	489
1. COMPUTATIONAL STRUCTURAL MECHANICS (CSM)	
A Computational Study of Detonation of Propagation in PBX-9404 Using CTH and LASmerf Codes _____ <i>W. Lawrence</i>	3
Breaching of Triple-Brick Walls: Numerical Simulations _____ <i>S. Akers, J. Ehrigott, and D. Rickman</i>	7
Statistical Fatigue and Residual Strength Analysis of New/Aging Aircraft Structure _____ <i>S. Fawaz and B. Andersson</i>	12
2. COMPUTATIONAL FLUID DYNAMICS (CFD)	
Applied Computational Fluid Dynamics in Support of Aircraft/Store Compatibility and Weapons Integration–2007 Edition _____ <i>1Lt. J. Babcock</i>	21
Characterization of High Altitude Turbulence for Air Force Platforms _____ <i>F. Ruggiero, J. Werne, A. Mahalov, B. Nichols, and D. Wroblewski</i>	28
Computations of a Maneuvering Unmanned Combat Air Vehicle Using a High-Order Overset Grid Method _____ <i>R. Gordnier, S. Sherer, and M. Visbal</i>	33
High Resolution Simulation of Full Aircraft Control at Flight Reynolds Numbers _____ <i>S. Morton, J. Forsythe, D. McDaniel, K. Bergeron, R. Cummings, S. Goertz, J. Seidel, and K. Squires</i>	41
HPC Enhancement of Plume Modeling for Use by Military Simulators _____ <i>K. Obenschain and A. Moses</i>	48
Lattice Boltzmann Algorithms for Fluid Turbulence _____ <i>G. Vahala, J. Yopez, M. Soe, L. Vahala, and S. Ziegler</i>	52
Multi-Scale Predictability of High-Impact Stratospheric Clear Air Turbulence Events for Air Force Platforms _____ <i>A. Mahalov, M. Moustououi, and B. Nichols</i>	57
Time-Accurate Calculations of Free-Flight Aerodynamics of Maneuvering Projectiles _____ <i>J. Sahu</i>	64
3. CFD COUPLED TO CHEMISTRY, MAGNETIC FIELDS, AND STRUCTURES (CFD, CSM, & CCM)	
Active Flow Control of Low-Pressure Turbine Separation _____ <i>W. Balzer, A. Gross, and H.F. Fasel</i>	73
Combustion Chamber Fluid Dynamics and Hypergolic Gel Propellant Chemistry Simulations for Selectable Thrust Rocket Engines _____ <i>M. Nusca, C.-C. Chen, and M. McQuaid</i>	83
Computational Investigations of Air Entrainment, Hysteresis, and Loading for Large-Scale, Buoyant Cavities _____ <i>M. Kinzel, J. Lindau, J. Peltier, F. Zajaczkowski, T. Mallison, R. Kunz, R. Arndt, and M. Wosnik</i>	89

Computational Modeling of the CH-47 Helicopter in Hover _____	98
<i>A. Dimanlig, E. Meadowcroft, R. Strawn, and M. Potsdam</i>	
Direct Quantum Mechanical Simulations of Shocked Energetic Materials Supporting Future Force Insensitive Munitions Requirements _____	104
<i>W. Mattson, N. Romero, B. Rice, and J. Fischer</i>	
Effect of Curved Radial Vane Cavity Arrangements on Predicted Inter-Turbine Burner (ITB) Performance ____	110
<i>H. Thornburg, B. Sekar, J. Zelina, and R. Greenwood</i>	
Fast and Accurate CBR Defense for Homeland Security: Bringing HPC to the First Responder and Warfighter _____	120
<i>G. Patnaik and J. Boris</i>	
Integrated Analysis of Scramjet Flowpath with Innovative Inlets _____	127
<i>D. Gaitonde, F. Malo-Molina, H. Ebrahimi, and D. Risha</i>	
Large Eddy Simulations of Bluff-Body Stabilized Turbulent Flames and Gas Turbine Combustors _____	133
<i>S. James, J. Zhu, M. Anand, and B. Sekar</i>	
Simulation of Enhance-Explosive Devices in Chambers and Tunnels _____	139
<i>J. Bell, V. Beckner, and A. Kuhl</i>	
4. COMPUTATIONAL BIOLOGY, CHEMISTRY AND MATERIALS SCIENCE (CCM)	
<i>ab Initio</i> Molecular Dynamics Simulations of Molten Ni-Based Superalloys _____	147
<i>M. Asta, D. Trinkle, and C. Woodward</i>	
Calculations for Gas-Flow Driven Molecular Rotor _____	153
<i>J. Vacek, J. Chocholousova, and J. Michl</i>	
Chemical Oxygen-Iodine Layer Device Simulation Using the 3D, unsteady Navier-Stokes Equations _____	158
<i>T. Madden</i>	
Computational Chemistry Modeling of the Atmospheric Fate of Toxic Industrial Compounds (TICs) _____	167
<i>S. Bunte, M. Hurley, D. Taylor, D. Curran, K. Runge, D. Burns, M. Cory, and J. Vasey</i>	
Design of Energetic Ionic Liquids _____	171
<i>J. Boatz, M. Gordon, G. Voth, and S. Hammes-Schiffer</i>	
Modeling of Materials for naval SONAR, Pollution Control, and Nonvolatile Memory Application _____	177
<i>I. Grinberg, A. Kolpak, Y.-H. Shin, and A.M. Rappe</i>	
Molecular Dynamics Study of Alkanethiolate Self-Assembled Monolayer coated Gold Nanoparticle _____	185
<i>B. Henz and M. Zachairah</i>	
Multiscale Simulations of High Performance Capacitors and Nanoelectronic Devices _____	194
<i>J. Bernholc, V. Rajan, F. Ribeiro, W. Lu, L. Yu, and M. Buongiorno Nardelli</i>	
Organic Materials for Multiphoton Absorption: Time-Dependent Density Functional Theory Calculations ____	200
<i>P. Day, K. Nguyen, and R. Pachter</i>	
Parallel 3D FDTD Simulator for Photonic Crystals _____	205
<i>J. Ayubi-Moak, S. Goodnick, G. Speyer, D. Stanzione, and P. Sortirelis</i>	
Polynitrogen/Nanoaluminum Surface Interactions _____	211
<i>J. Boatz and D. Sorescu</i>	
Predictions of Crystal Structures from First Principles _____	216
<i>R. Podeszwa, K. Szalewicz, R. Bukowski, and B. Rice</i>	
Transient Response of Strongly Correlated materials to Large Electric Fields: Utilizing the Large Memory Capacity of ARSC's Midnight Machine in a Capability Applications Project ____	222
<i>J. Freericks</i>	

5. COMPUTATIONAL ELECTROMAGNETICS AND ACOUSTICS (CEA)

Acoustic Wave Propagation in Urban Environments _____	233
<i>M. Parker, S. Ketcham, and H. Cudney</i>	
Signature Evaluation for Thermal Infrared Countermeasure and IED Detection Systems _____	238
<i>J. Peters, S. Howington, J. Ballard, III, and L. Lynch</i>	
Verification of Acoustic Propagation Over Natural and Synthetic Terrain _____	247
<i>H. Cudney, S. Ketcham, and M. Parker</i>	

6. CLIMATE/WEATHER/OCEAN MODELING AND SIMULATION (CWO)

An Operational Mesoscale Ensemble-Based Forecast System using HPC Resources _____	255
<i>J. Bowers, E. Astling, Y. Liu, J. Hacker, S. Swerdlin, T. Betancourt, and T. Werner</i>	
Global Ocean Prediction Using HYCOM _____	259
<i>A. Wallcraft, H. Hurlburt, E.J. Metzger, E. Chassignet, J. Cummings, and O.M. Smedstad</i>	
Multi-Scale Predictability of High-Impact Weather in the Battlespace Environment _____	263
<i>J. Doyle, C. Reynolds, J. McLay, T. Holt, J. Teixeira, and C. Bishop</i>	

7. SIGNAL/IMAGE PROCESSING (SIP); ELECTRONICS, NETWORKING, AND SYSTEMS/C4ISR (ENS); AND TESTING

Computationally Intensive SIP Algorithms on HPC _____	271
<i>J. Unpingo, J. Gardiner, L. Humphrey, and S. Ahalt</i>	
On-Line Analytical Process Tools for the VISION Engineering Performance Data Mart _____	277
<i>K. Yetzer, A. Warnock, and A. Krishnamurthy</i>	
Sourcery VSIPL++ on the Cell Broadband Engine: A Fused Fast Convolution Example _____	283
<i>D. McCoy, J. Bergmann, and S. Seefeld</i>	
Spatial Processing of Urban Acoustic Wave Fields from High-Performance Computations _____	289
<i>S. Ketcham, D.K. Wilson, H. Cudney, and M. Parker</i>	
The SIP High Productivity Toolset for Parameter Sweeps and Monte Carlo Runs _____	296
<i>B. Elton, J. Nehrbass, S. Ahalt, J. Gardiner, and L. Humphrey</i>	
Web Interface for Querying/Searching RDF Database _____	299
<i>B. Guilfoos, S. Samsi, J.C. Chaves, J. Unpingo, J. Nehrbass, A. Chalker, S. Ahalt, and A. Krishnamurthy</i>	

8. COMPUTATIONAL INFRASTRUCTURE AND HARDWARE PERFORMANCE

A GPU-Enhanced Cluster for Accelerated FMS _____	305
<i>D. Davis, R. Lucas, G. Wagenbreth, J. Tran, and J. Moore</i>	
Benchmarking the MIT LL HPCMP DHPI System _____	310
<i>A. Reuther, A. Funk, J. Kepner, A. McCabe, W. Arcand, T. Currie, M. Hubbell, and P. Michaleas</i>	
Computational Science IDE for HPCMP Systems _____	317
<i>D. Hudak, N. Ludban, V. Gadepally, S. Samsi, J.C. Chaves, and A. Krishnamurthy</i>	
Enhancements to the eXtensible Data Model and Format (XDMF) _____	322
<i>J. Clarke and E. Mark</i>	
Evaluating High Performance Computing Systems at the Naval Research Laboratory _____	328
<i>W. Anderson, J. Osburn, R. Rosenberg, and M. Lanzagorta</i>	

Finite Difference Time Domain (FDTD) Simulations Using Graphics Processors _____	334
<i>S. Adams, J. Payne, and R. Boppana</i>	
Floating-Point Computations on Reconfigurable Computers _____	339
<i>G. Morris</i>	
HPC Access Using “KVM over IP” _____	345
<i>D. Kedziorek and G. Czerniak</i>	
Reconfigurable Computing for High Performance Computing Computational Science _____	350
<i>S. Park, B. Henz, and D. Shires</i>	
Using FPGAs to Supplement Ray-Tracing Computations on the Cray XD-1 _____	359
<i>C. Cameron</i>	
Web-Based High Performance Remote Visualization _____	364
<i>R. Vickery, J. Martin, J. Fowler, R. Moorehead, Y. Dandass, T. Atkinson, A. Cedilnik, P. Adams, and J. Clarke</i>	

9. SOFTWARE PERFORMANCE AND PERFORMANCE MODELING

A Comparative Study of ARL Linux Cluster Performance _____	373
<i>G. Petit, J. Ianni, and M. Monaghan</i>	
Application Scalability and Performance on Multicore Architectures _____	378
<i>T. Simon, S. Cable, and M. Mahmoodi</i>	
ezHPC: Adopting a Program-Wide, User-Centered Design Approach to the ezHPC User Interface _____	382
<i>J. Baca, W. Monceaux, K. Rappold, P. Duett, K. Buchanan, S. Swillie, and G. Browning</i>	
Memory Leak Detection in FORTRAN Applications Using TAU _____	387
<i>S. Shende, A. Malony, S. Moore, and D. Cronk</i>	
Sustained Systems Performance Test on HPCMP Systems _____	394
<i>P. Bennett</i>	
Technical Challenges of Supporting Interactive HPC _____	403
<i>A. Reuther, J. Kepner, A. McCabe, J. Mullen, N. Bliss, and H. Kim</i>	
The Road to Improving the Performance of Satisfiability Solvers Using HPC _____	410
<i>J. Ezick and R. Lethin</i>	

10. COMPUTATIONAL BIOLOGY

A Tool for Creating and Parallelizing Bioinformatics Pipelines _____	417
<i>C. Yu and P. Wilson</i>	
DOVIS: A Tool for High-Throughput Virtual Screening _____	421
<i>X. Jiang, K. Kumar, A. Wallqvist, and J. Reifman</i>	
Stochastic Simulations of Cellular Biological Processes _____	425
<i>Y. Chushak, B. Foy, and J. Frazier</i>	

11. SHIP AND SOFTWARE SUPPORT

Crashback Maneuvers _____	433
<i>S. Slimon and C. Wagner</i>	
Modeling Breaking Ship Waves for Design and Analysis of Naval Vessels _____	440
<i>G. Weymouth, K. Hendrickson, D.K.P. Yue, T. O’Shea, D. Dommermuth, P. Adams, and M. Valenciano</i>	

Modeling of Mine Countermeasure Dart Dispense _____	446
<i>G. Prybyla, M. Neaves, J. Baltar, K. Losser, M. Morrell, and W. Dietz</i>	
Ocean Wave Prediction Using Large-Scale Phase-Resolved Computations _____	449
<i>G. Wu, Y. Liu, and D.K.P. Yue</i>	
Powering and Motion Predictions of High Speed Sea Lift (HSSL) Ships _____	455
<i>J. Gorski, R. Miller, P. Carrica, M. Kandasamy, and F. Stern</i>	
12. COMPUTATIONAL METHODS	
Omicron: Rapid Mesh Generation on HPC Platforms for the Study of Near Surface Phenomena with Remote Sensing _____	463
<i>O. Eslinger, A. Hines, S. Howington, J. Ballard, Jr., J. Peters, B. White, and P. McAllister</i>	
Space Surveillance Network and Analysis Model (SSNAM) Performance Improvements _____	469
<i>A. Butkus, K. Roe, B. Mitchell, and T. Payne</i>	
Testing Parallel Linear Iterative Solvers for Finite Element Groundwater Flow Problems _____	474
<i>F. Tracy, T. Oppe, and S. Gavali</i>	
Toward a Process for Quantifying Uncertainty in a CFD Solution: Analysis of Mesh Refinement _____	482
<i>B. Johnson</i>	
Author Index _____	495
