

# **2008 5th International Symposium on Turbo Codes and Related Topics**

**Lausanne, Switzerland  
1-5 September 2008**

**IEEE Catalog Number:**  
**ISBN 13:**

**CFP08TCR-PRT**  
**978-1-4244-2862-5**

# Table of Contents

|                                                                                                                                             |            |
|---------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Upper Bound on the Error Exponent of Regular LDPC Codes Transmitted over the BEC .....</b>                                               | <b>1</b>   |
| <i>Idan Goldenberg, David Burshtein</i>                                                                                                     |            |
| <b>Upper Bounds on the MAP Threshold of Iterative Decoding Systems with Erasure Noise.....</b>                                              | <b>7</b>   |
| <i>ChiaWen Wang and Henry D. Pfister</i>                                                                                                    |            |
| <b>Decay of Correlations: An Application to Low-Density Parity Check codes .....</b>                                                        | <b>13</b>  |
| <i>Shrinivas Kudekar and Nicolas Macris</i>                                                                                                 |            |
| <b>Hybrid Concatenated Codes with Asymptotically Good Distance Growth.....</b>                                                              | <b>19</b>  |
| <i>Christian Koller, Alexandre Graelli Amat, Jorg Kliewer, Francesca Vatta, and Daniel J. Costello, Jr</i>                                  |            |
| <b>Analysis of Weight Distributions of Two-Edge type LDPC Codes by Hayman Approximation .....</b>                                           | <b>25</b>  |
| <i>Tomoharu Awano, Kenta Kasai, Tomoharu Shibuya and Kohichi Sakaniwa</i>                                                                   |            |
| <b>Linear Complexity Approximate LP Decoding of LDPC Codes: Generalizations and Improvements .....</b>                                      | <b>31</b>  |
| <i>David Burshtein</i>                                                                                                                      |            |
| <b>A Separation Algorithm for Improved LP-Decoding of Linear Block Codes .....</b>                                                          | <b>37</b>  |
| <i>Akin Tanatmis, Stefan Ruzika, Horst W. Hamacher, Mayur Punekar, Frank Kienle and Norbert Wehn</i>                                        |            |
| <b>A Cutting Plane Method based on Redundant Rows for Improving Fractional Distance .....</b>                                               | <b>43</b>  |
| <i>Makoto Miwa, Tadashi Wadayama and Ichi Takumi</i>                                                                                        |            |
| <b>Pinning Techniques for Low-Floor Detection/Decoding of LDPC-Coded Partial Response Channels .....</b>                                    | <b>49</b>  |
| <i>Yang Han and William E. Ryan</i>                                                                                                         |            |
| <b>Improving BICM Performance of QAM constellations for broadcasting applications.....</b>                                                  | <b>55</b>  |
| <i>Charbel Abdel Nour and Catherine Douillard</i>                                                                                           |            |
| <b>Packet combining for turbo-diversity in HARQ systems with integrated turbo-equalization.....</b>                                         | <b>61</b>  |
| <i>Abdel-Nasser Assimi, Charly Poulliat, and Inbar Fijalkow</i>                                                                             |            |
| <b>A 5-Gbps FPGA prototype of a (31,29)<sup>2</sup> Reed-Solomon Turbo Decoder .....</b>                                                    | <b>67</b>  |
| <i>Camille Leroux, Gérald Le Mestre, Christophe Jégo, Patrick Adde and Michel Jézéquel</i>                                                  |            |
| <b>Hardware Implementation of Soft-Decision Decoding for Reed-Solomon Code .....</b>                                                        | <b>73</b>  |
| <i>Makiko Kan, Satoshi Okada, Takafumi Maehara, Kazuhiro Oguchi, Takashi Yokokawa, Toshiyuki Miyauchi</i>                                   |            |
| <b>High Throughput Hardware Architecture for (1440,1344) Low-Density Parity-Check Code Utilizing Quasi-Cyclic Structure.....</b>            | <b>78</b>  |
| <i>Hiroyuki Yamagishi and Makoto Noda</i>                                                                                                   |            |
| <b>FlexiChaP: A Reconfigurable ASIP for Convolutional, Turbo, and LDPC Code Decoding .....</b>                                              | <b>84</b>  |
| <i>Matthias Alles, Timo Vogt, Norbert Wehn</i>                                                                                              |            |
| <b>Fine Grain Parallel Decoding of Turbo Product Codes: Algorithm and Architecture .....</b>                                                | <b>90</b>  |
| <i>Thierry Goubier, Catherine Dezan, Bernard Pottier and Christophe Jégo</i>                                                                |            |
| <b>Architecture and Implementation of an Iterative Receiver for MIMO Systems .....</b>                                                      | <b>96</b>  |
| <i>Laurent Boher, Rodrigue Rabineau and Maryline H'elard</i>                                                                                |            |
| <b>Reduced complexity near-optimal iterative receiver for Wimax full-rate space-time code .....</b>                                         | <b>102</b> |
| <i>Karine Amis, Guillaume Sicot and Dominique Leroux</i>                                                                                    |            |
| <b>Low-Density MIMO Codes.....</b>                                                                                                          | <b>107</b> |
| <i>Frank Kienle</i>                                                                                                                         |            |
| <b>The Performance of Sphere Decoders for Iterative Spatial Multiplexing MIMO Receiver .....</b>                                            | <b>113</b> |
| <i>Ming Zhao, Zhenning Shi, and Mark C. Reed</i>                                                                                            |            |
| <b>Apply bit-level interleaver to improve the error rate performance of the double binary turbo code with less decoder complexity .....</b> | <b>118</b> |
| <i>Zheng Yan-Xiu, Fang, Yu-Chuan</i>                                                                                                        |            |

# Table of Contents

|                                                                                                                                                       |            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Parity and Column Twist Bit Interleaver for DVB-T2 LDPC Codes .....</b>                                                                            | <b>123</b> |
| <i>Takashi Yokokawa, Makiko Kan, Satoshi Okada, Lui Sakai</i>                                                                                         |            |
| <b>Optimal 8PSK mappings for BICM-ID over quasi-static fading channels.....</b>                                                                       | <b>128</b> |
| <i>M. R. D. Rodrigues, W. R. Carson and I. J. Wassell</i>                                                                                             |            |
| <b>Bit-width Optimization of Extrinsic Information in Turbo Decoder .....</b>                                                                         | <b>134</b> |
| <i>Ashwani Singh, Emmanuel Boutillon, Guido Masera</i>                                                                                                |            |
| <b>A New Binary Iterative LDPC Decoding Algorithm .....</b>                                                                                           | <b>139</b> |
| <i>Guosen Yue, Xiaodong Wang</i>                                                                                                                      |            |
| <b>Reduced-complexity Serial Min-sum Decoding .....</b>                                                                                               | <b>145</b> |
| <i>Hironori Uchikawa, Kohsuke Harada and Yasuhiko Tanabe</i>                                                                                          |            |
| <b>A Reduced-Complexity Box-Plus Decoder for LDPC Codes .....</b>                                                                                     | <b>151</b> |
| <i>Matthew Viens and William E. Ryan</i>                                                                                                              |            |
| <b>Bounds on the Convergence Speed of Iterative Message-Passing Decoders over the Binary Erasure Channel.....</b>                                     | <b>157</b> |
| <i>Igal Sason, Gil Wiechman</i>                                                                                                                       |            |
| <b>Asymptotic Gaps Between BP Decoding and Local-MAP Decoding For Low-Density Parity-Check Codes.....</b>                                             | <b>162</b> |
| <i>Ryuhei Mori, Kenta Kasai, Tomoharu Shibuya, and Kohichi Sakaniwa</i>                                                                               |            |
| <b>Pseudo-Binomial Degree Distributions from Derivative Matching.....</b>                                                                             | <b>168</b> |
| <i>Enrico Paolini and Marco Chiani, Marc Fossorier</i>                                                                                                |            |
| <b>On the Asymptotic Performance of Low-Complexity Decoded LDPC Codes with Constituent Hamming Codes.....</b>                                         | <b>174</b> |
| <i>Victor Zyablov, Maja Loncar, Rolf Johannesson, and Pavel Rybin</i>                                                                                 |            |
| <b>Construction of High-Girth QC-LDPC Codes.....</b>                                                                                                  | <b>180</b> |
| <i>Yige Wang, Jonathan S. Yedidia, Stark C. Draper</i>                                                                                                |            |
| <b>Convergence Analysis of MMSE Based Multiuser MIMO Turbo Detector with Linear Precoding Strategies .....</b>                                        | <b>186</b> |
| <i>Juha Karjalainen, Tad Matsumoto, Wolfgang Utschick</i>                                                                                             |            |
| <b>Performance Analysis of Multi-ary Systems with Iterative Linear Minimum-Mean-Square-Error Detection .....</b>                                      | <b>192</b> |
| <i>Li Ping, Jun Tong, Xiaojun Yuan and Qinghua Guo</i>                                                                                                |            |
| <b>Precoder Design for ISI Channels Based on Iterative LMMSE Equalization.....</b>                                                                    | <b>198</b> |
| <i>Xiaojun Yuan, Haitao Li, Li Ping and Xiaokang Lin</i>                                                                                              |            |
| <b>MMSE turbo equalization using a low complexity series expansion to approximate the matrix inversion in frequency selective MIMO channels .....</b> | <b>204</b> |
| <i>Nicolas Le Josse, Christophe Laot and Karine Amis</i>                                                                                              |            |
| <b>A Novel Graph-Based Approach to Low-Complexity Detection for Turbo Equalization.....</b>                                                           | <b>209</b> |
