# TABLE OF CONTENTS

|                                                                                                                                                                 |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>A First-Principles Approach for Predicting the Rate Coefficient for n-Alkane Cracking in Zeolites</b> .....                                                  | 1  |
| <i>Joseph A. Swisher, Niels Hansen, Theo Maesen, Frerich J. Keil, Berend Smit, Alexis T. Bell</i>                                                               |    |
| <b>Intrinsic and Apparent Kinetics for the Alkylation of Benzene Over H-ZSM-5 – A Multiscale Investigation From the Molecular Level to the Reactor</b> .....    | 2  |
| <i>Niels Hansen, Rajamani Krishna, Jasper M. Van Baten, Alexis T. Bell, Frerich J. Keil</i>                                                                     |    |
| <b>A New Solid State Table for Predicting Coverage Dependent Adsorption Energies On Transition Metal Surfaces</b> .....                                         | 4  |
| <i>John R. Kitchin, Nilay Inoglu, Spencer Miller</i>                                                                                                            |    |
| <b>First-Principles Investigation of Alkali Promotion Mechanism in Oxidation Reactions Over Ag(111) Surfaces</b> .....                                          | 5  |
| <i>Hongliang Xin, Suljo Linic</i>                                                                                                                               |    |
| <b>Kinetic Monte Carlo Simulation of Surface Segregation in Platinum-Based Alloys Under O<sub>2</sub> Adsorption and Reaction</b> .....                         | 6  |
| <i>Rafael Callejas-Tovar, Perla B. Balbuena</i>                                                                                                                 |    |
| <b>Periodic DFT Study of the Effect of Uniform Electric Field On Chemisorption of Molecules On Pt(111) Surface</b> .....                                        | 7  |
| <i>Prashant Deshlahra, Eduardo E. Wolf, William F. Schneider</i>                                                                                                |    |
| <b>Statistics of Adsorption Sites During Oxygen Adsorption On Pt(111)</b> .....                                                                                 | 9  |
| <i>Chao Wu, David Schmidt, Jason Bray, Rachel Getman, William Schneider</i>                                                                                     |    |
| <b>Future Directions in Heterogeneous Catalysis</b> .....                                                                                                       | 10 |
| <i>Robert J. Davis</i>                                                                                                                                          |    |
| <b>Pyrolysis Based Technologies for Conversion of Lignocellulosic Biomass Into Fuels and Chemicals</b> .....                                                    | 11 |
| <i>George W. Huber</i>                                                                                                                                          |    |
| <b>Nature Inspired Routes to Innovation in Reaction Engineering</b> .....                                                                                       | 12 |
| <i>Marc-Olivier Coppens</i>                                                                                                                                     |    |
| <b>Overcoming Complexity and Emergent Behavior Via Multiscale Modeling</b> .....                                                                                | 13 |
| <i>Dionisios G. Vlachos</i>                                                                                                                                     |    |
| <b>Hot-Spots in Chemical Reaction Engineering – Multifunctional Reactors and Materials</b> .....                                                                | 14 |
| <i>Benjamin A. Wilhite</i>                                                                                                                                      |    |
| <b>From First-Principles to the Elucidation, Design and Control of Active Catalytic Centers and Their Environments</b> .....                                    | 15 |
| <i>Matthew Neurock</i>                                                                                                                                          |    |
| <b>Controlling Bond Scission Sequence of Methanol Decomposition On Pt-Modified Tungsten Carbide</b> .....                                                       | 16 |
| <i>Alan Lee Stottlemeyer, Ping Liu, Jingguang G. Chen</i>                                                                                                       |    |
| <b>One-Dimensional (1-D) Electrocatalysts for Low Temperature Fuel Cells</b> .....                                                                              | 17 |
| <i>Wenzhen Li</i>                                                                                                                                               |    |
| <b>The Search for Microporous, Strongly Basic Catalysts: Experiment and Theory in the Synthesis and Characterization of Nitrogen-Doped Zeolite Y</b> .....      | 18 |
| <i>Karl D. Hammond, Murad Gharibeh, Geoffrey A. Tompsett, Fulya Dogan, Wenqin Shen, George W. Huber, Clare P. Grey, Scott M. Auerbach, W. Curtis Conner Jr.</i> |    |
| <b>Enantiospecific Desorption of Propylene Oxide From Chirally Modified Surfaces</b> .....                                                                      | 19 |
| <i>Wai Yeng Cheong, Andrew J. Gellman</i>                                                                                                                       |    |
| <b>Design of Supported Metal Nanoparticulate Catalysts for Hydrogenation of Biomass Derived Polyols</b> .....                                                   | 22 |
| <i>Debdut Roy, Bala Subramaniam, Raghunath V. Chaudhari</i>                                                                                                     |    |
| <b>Synthesis, Characterization, and Catalytic Activity of Nanostructured Tin(IV) and Tungsten(VI) Catalysts</b> .....                                           | 23 |
| <i>Michael E. Peretich, Craig E. Barnes</i>                                                                                                                     |    |
| <b>Kinetics and Mechanism of N-Substituted Amide Hydrolysis in High-Temperature Water</b> .....                                                                 | 24 |
| <i>Peigao Duan, Liyi Dai, Phillip E. Savage</i>                                                                                                                 |    |
| <b>Microkinetic Modeling of Polyol Thermal Decomposition and Reforming On Platinum</b> .....                                                                    | 25 |
| <i>Michael Saliccioli, Dionisios G. Vlachos</i>                                                                                                                 |    |
| <b>Integration of Computational Fluid Dynamics and Advanced Combustion Models Using An On-the-Fly Kinetic Reduction Approach</b> .....                          | 27 |
| <i>Kaiyuan He, I.P. Androulakis, M.G. Ierapetritou</i>                                                                                                          |    |
| <b>One Approach to Kinetic Modeling of Combustion in Gaseous Composite Fuels</b> .....                                                                          | 30 |
