

2011 8th International Conference on the European Energy Market

(EEM 2011)

**Zagreb, Croatia
25 – 27 May 2011**

**IEEE Catalog Number: CFP1152D-PRT
ISBN: 978-1-61284-285-1**

Table of Contents

Welcome	iv
Committees	v
Reviewers	vi
Partners, Sponsors and Donors	vii
TOC	viii
Keynote Presentations	xiii
Are Current Electricity Markets Suitable to Integrate Non-Dispatchable Producers?	xiii
Possibilities of Active Contribution of Prosumers in Balancing of Power Systems	xiii
Planning the grid for 2020 and beyond – the role of ENTSO-E	xiii
The Game Changers in Energy Markets	xiv
Ancillary Services Market in the South East Europe	xiv
3rd Package and European Power Systems of the Future	xv
Special Sessions	xvi
The Economics of Smart Grid	xvi
The Development of the European Power Grid	xvi
The Dissemination Session of the European FP7 Project REALISEGRID	xvii
Session 01: Network Congestion Management	1
Congestion Management in the European Electricity Sector: Lessons from the European Air Transport Sector	2
Congestion Management in the Deregulated Electricity Market: An Assessment of Locational Pricing, Redispatch and Regulation	8
Transmission Congestion Cost Allocation Using Congestion Severity Index Considering Load Participation in Transmission Line Flows	N/A
Congestion Pricing in Electricity Markets: Infeasibility, Sub-optimality and Degeneracy	20
Proposed Data Set for Monitoring the 8th Congestion Management Region	N/A
Technical and Economic Comparison of Joint Cross-Border and National Curative Congestion Management Application	33
Session 02: Smart Grid (1)	39
Smart Grid Ready Concept	40
LMP Triggered Real Time Demand Response Events	45
The Impact of Charging Strategies for Electric Vehicles on Power Distribution Networks	51
Operational Properties of a Photovoltaic System with Three Single Phase Inverters	57
Influence of Variable Supply and Load Flexibility on Demand-Side Management	63
Intelligent Buildings in Smart Grid	N/A
Specific Features of Excitation System of Different Distributed Power Plants	74
Session 03: Electricity Market Simulation and Modeling (1)	80
Short Term Constraints for a Long Term Energy and Reserve Market Equilibrium Simulation	81
Efficiency of Continuous Double Auctions in the Electricity Market	87
Agent-based Simulation of New Energy Markets	93
Bilateral Electricity Market Theory based on Conjectural Variation Equilibria	99
A Method for Calibration of a Fundamental Model of Electricity Price	105
An Agent Based Game Theory Approach to Analysing Constrained Electricity Markets	110
Session 04: Electricity Market Economics	115
Is the EUA a New Asset Class?	116
Electricity Spot Market Simulation Involving Bilateral Contracts Hedging	122

The Financial Regulation of Energy and Environmental Markets	128
Private Investments Profitability in the Croatian Liberalized Energy Market	134
The Customer Perspective of the Electric Vehicles Role on the Electricity Market	141
Market Coupling of South East Europe in the Electricity Sector	149
Session 05: Risk Management in Electricity Markets	155
A Fuzzy – Probabilistic Hybrid Approach to Evaluate the Impact of Component Outages, Demand and Generation Cost Uncertainties in the Operation of Power Systems	156
Designing Incentive Market Mechanisms for Improving Restructured Power System Reliabilities	162
Reliability Evaluation of Balkan Generation Systems Considering Planning Exercise of Wind Power Integration	167
Model of Electric Power System from the Point of View of Safety	173
Portfolio Optimization Tool with Risk Calculation	179
Electricity Grid In-Feed from Renewable Sources: A Risk for Pumped-Storage Hydro Plants?	185
Session 06: Electricity Pricing	191
Mean-based Method of Estimating Financial Cost of Load Forecasting	192
The Short Term Electricity Prices Forecasting Using Markov Chains	198
Forecasting Prices of Electricity on HUPX	204
Forecasting Next-Day Electricity Prices by a Neural Network Approach	209
Short-term Consumer Benefits of Dynamic Pricing	216
Electricity Price Forecasting - ARIMA Model Approach	222
The Impact of Wind Power in the Netherlands on Day-ahead Electricity Prices	226
Session 07: Electricity Market Simulation and Modeling (2)	231
Fundamental Conjectured Supply Function Equilibrium: Application to the Iberian System	232
Curve Fitting with Mixed Integer Programming: Applications to Electricity Markets Models	238
Efficient Solution of Optimal Multimarket Electricity Bid Models	244
Analysis of Competitive Electricity Markets under a New Model of Real-Time Retail Pricing	250
Complex Market Integration in MASCEM Electricity Market Simulator	256
Energy and Ancillary Services Joint Market Simulation	262
Session 08: Power Generation Strategic Planning (1)	268
Short Term Power System Planning with Water Value and Energy Trade Optimization	269
Short-term Value for the Water Stored in Headsensitivity Power System Reservoirs	275
Identification of the Best Power Plant Layout for Large Offshore Wind Farms Connected Via VSC-HVDC Links	281
Business Case Assessment of Balancing Large Scale PV with Flexible CHP	288
A Profit Maximization Model for a Power Producer in a Pool-Based Energy Market with Cost Recovery Mechanism	294
Representation of Electricity Generation Capacity Expansion by Means of Game Theory Models	300
The Value of a Pumping-Hydro Generator in a System with Increasing Integration of Wind Power	306
Session 09: Structure of Electricity, Gas and Oil Markets	312
Analyzing Market Power in a Multistage and Multiarea Electricity and Natural Gas System	313
Development of a Model for Short-Term Load Forecasting with Neural Network and its Application to the Electrical Spanish Market	321
A Medium-Term Operation Model for a Natural Gas System	327
European Balancing Markets	333
The Puzzle of Asymmetric Effects of Oil: New Results from International Stock Markets	339
Gas Network Topology Optimization for Upcoming Market Requirements	346

Session 10: Smart Grid (2)	352
Evaluation and Assessment of Balancing Resources	353
Allocation and Integrated Configuration of Capacitor Banks and Voltage Regulators Considering Multi-Objective Variables in Smart Grid Distribution System	N/A
Optimization of Voltage Regulators Settings and Transformer Tap Zones in Distribution Systems with Great Load Variation Using Distribution Automation and the Smart Grids Initiatives	365
Reducing Energy in Buildings by Using Building Automation Systems and Alternative Energy-Using Systems	370
A Software Tool for the Optimal Planning and the Economic Evaluation of Residential Cogeneration Districts	376
Integrated Energy Microgrids for Community-Scale Systems: Case Study Research in the Azores Islands	382
Session 11: RES Integration	388
Environmental Dispatch of the Portuguese Power System for CO ₂ Emissions Reduction	389
Scenario Analysis for RES-E Integration in Italy up to 2050	395
A Scenario Analysis for an Optimal RES Integration into the European Transmission Grid up to 2050	401
Negotiated Predictive Dispatch: Receding Horizon Nodal Electricity Pricing for Wind Integration	407
Large Scale Integration of Renewable Energy Sources in the Spanish Power System. Curtailment and Market Issues	413
Challenges of Optimizing the Integration of Distributed Generation into the Distribution Network	419
Session 12: Power Generation Strategic Planning (2)	427
Data-collecting Information System – Basis for Managing, Planning and Monitoring Operations of the HEP Proizvodnja d.o.o.'s Production Capacities	428
Model of Short Term Hydro Power Plant Scheduling in Competitive Environment	434
A Decision Support System for Hydro Power Plants in Markets for Energy and Ancillary Services	442
The State-of-the-Art of the Short Term Hydro Power Planning with Large Amount of Wind Power in the System	448
A Particle Swarm Optimization Method for Power Bidding Coal Units in Competitive Auctions	N/A
Medium-Term Unit Commitment in a Pool Market	461
The Mixed-Integer Linear Optimization Model of Virtual Power Plant Operation	467
Session 13: Transmission Investment Policies	472
Transmission Costs Allocation Based on Optimal Re-Dispatch	473
Optimal Voltage Scheduling Procedure for Croatian Power System	479
Distributed Remedial Action Strategy for a 500-kV AC Transmission System	484
Optimization of Power System Controller Parameters Using Eigen Value Sensitivity and Linear Programming	489
Possible Savings in Electricity Transmission Using Wide Area Monitoring Technologies in Croatian Power Transmission Network	495
The Economic Analysis of Transmission Investment Policies	501
Session 14: Distribution Networks	507
Maximization of Social Welfare in Distribution Network with Distributed Generations using Genetic Algorithm	508
Tariff Redesign in the Purpose of Increasing Market Business Quality in Distribution System	514
Financial Impact of Penalties Applied to Brazilian Energy Distribution Companies by Exceeded of the Limits of Performance of Power Supply Continuity	520
Optimizing Capacitor Banks Management in Distribution Networks, with Large Presence of Distributed Generation	526
Impact of Distributed Generation (DG) on Voltage Profile in 38kV Distribution System	532
Optimal Switch Placement in Distribution Power System Using Linear Fragmented Particle Swarm Optimization Algorithm Processed by GA	537
Distributed Generation Dispatch Optimization by Artificial Neural Network Trained by Particle Swarm Optimization Algorithm	543

Session 15: Ancillary Services	549
The Impact of Electricity Market Design on Periodic Network Frequency Excursions	550
Ancillary Services in the Iberian Electricity Market – Current Situation and Harmonization Approaches	556
Wind Power Plant as Ancillary Service Provider	562
Combined Bidding at Power and Ancillary Service Markets	568
Use of the Energy Box Acting as an Ancillary Service	574
User P-Q Diagram as a Tool in Reactive Power Trade	580
Session 16: Electricity Market Design	585
Mandatory Long-Term Contracts for Renewable Energy: The Best of Both Worlds?	586
The Brazilian Electricity Model: An Overview of the Current Structure and Market Design	592
Analysis with Game Theory of the Design Options of the Real Time Electricity Market with Market Power	N/A
Possible Effects of Balancing Market Integration on Performance of the Individual Markets	608
A Study of Electricity Market Design for Systems with High Wind Power Penetration	614
Locational Signals In Electricity Market Design: Do They Really Matter?	622
SEE Regional Wholesale Market Design: Available Options and Implementation	628
Session 17: Interconnections	634
Impact of German Wind Generation Forecasts on Net Transfer Capacities	635
Coordinated Development of the Power Systems	N/A
Optimisation of Costs and Benefits in Inter TSO Compensation Mechanism	647
Analysis of the Impact of Cross-Border Balancing Arrangements for Northern Europe	653
Are Flow-Based Capacity Allocation Systems Well Suited for European Integration?	N/A
Session 18: Energy Policy and Regulation	667
Evaluation of the Energy Policy for Lebanon	668
Attracting Wind Generators to the Wholesale Market by Mitigating Individual Exposure to Intermittent Outputs: an Adaptation of the Brazilian Experience with Hydro Generation	674
On Pricing Policy Transmission Mechanisms in Electricity Markets	680
The Influence of Regulatory Objectives on the Intensity of Unbundling in Electricity Markets	686
The Covenant of Mayors Initiative: Barriers Towards Realising its Full Potential in Greece	692
Electricity Distribution Regulation – Gap Analysis Between Croatian and Quality Dependant Model	698
Capacity Release, Asymmetric Regulation and Competition in Energy Markets	704
Session 19: Demand-Side Management	710
Demand Response and Its Sensitivity to Participation Rates and Elasticities	711
A Dynamic Household Appliance Stock Model for Load Management Introduction Strategies	717
A Systems Engineering Approach to Resolving Structural Barriers to the Implementation of Demand Response	723
Energy Demand Elasticities: Empirical Evidence from Tunisia	N/A
Demand Side Management and Energy Markets in Developing Countries	N/A
Securing Energy Supply by Harnessing Negajoules	741
Implementing DLMS/COSEM in Smart Meters	747
Session 20: RES Power Generation	753
The Spatial Diffusion of Photovoltaics in Germany	N/A
Low Voltage Ride Through Analysis of FSIG Based WECS with STATCOM	760
Wind Energy and Environmental Protection: Using GIS to Evaluate the Compatibility of Croatian Strategies	764

Wind Power Forecast Uncertainty in Daily Operation of Wind Park Combined with Storage	773
Additional Options for Eligible Electric Energy Producers	779
Potentials of Renewable Energy Market in Serbia – Case of Wind and Solar Energy	785
Session 21: Power System Planning in Market Conditions	791
Getting Back to Scenario Planning: Strategic Action in the Future of Energy Europe	792
Multiyear Transmission Expansion Planning using Discrete Evolutionary Particle Swarm Optimization	802
A Scenario Analysis for an Optimal Pan-European Cross-Border Network Development	808
Analyzing the Regional Development of the German Power System Using a Nodal Pricing Approach	814
Energy Development Strategy of Lower Silesia by Using the Foresight Methods	N/A
Approval Procedures for Building Transmission Lines: Obstacles and Solutions	826
Session 22: Market Power and Market Strategies	832
Impacts of Electric Vehicles' Charging Strategies in the Electricity Prices	833
Price Formation and Market Power in a Low Carbon Electricity System	839
Assessment of the Market Power Cost in Liberalised Electricity Markets Using SMPI, PMPI, and NMPI Indicators	844
Comparison and Empirical Validation of Optimizing and Agent-Based Models of the Italian Electricity Market.	849
Application of a Game Theory Model to Analyze the Competitive Behavior in the Iberian Electricity Market	857
Bidding in an Electricity Multi-Market Using a Q-Learning Approach	N/A
Session 23: Impact of RES and DG on Networks	869
The Influence of Wind Park Krš-Pađene on Reliability Indices of 110 kV Transmission Network	870
Impact of Wind Power on Commercial and Physical Flows within the CWE Region	876
Probabilistic Load Flow Procedure for Assessing the Distributed Generation Impact on the High Voltage Network	882
A Survey of the Spanish Framework for Production of Electricity from Renewable Sources	N/A
Review Paper on Wind Power Impact on Operation of Reserves	895
Session 24: Electricity Sector Restructuring Experiences and Strategies	904
Brazilian Electricity Sector Restructuring: From Privatization to the New Governance Structure	905
Actual State, Future Trends and Desirable Directions of Electricity Sector Development in the Region of South-East Europe	911
Barriers and Approaches in the Development of Renewable Resources in Rural Albania	917
A Quantitative Analysis of the Electricity Market in Switzerland	923
The New Generation Investment and Electricity Market Development in Kosovo	929
Implementation of the Feed-in Tariffs in the Macedonian Power System	935
