

# **2011 Computational Electromagnetics International Workshop**

**(CEM 2011)**

**Izmir, Turkey  
10-13 August 2011**

**IEEE Catalog Number: CFP1127D-PRT  
ISBN: 978-1-4577-1685-0**

# Contents

<b>Electromagnetic Macro-Modeling: An Overview of Current Successes and Future Opportunities.....</b>	<b>1</b>
A. C. Cangellaris	
<b>High-Order Vector Bases for Computational Electromagnetics.....</b>	<b>7</b>
R. D. Graglia	
<b>Divergence-Taylor-Orthogonal Basis Functions for the Discretization of Second-Kind Surface Integral Equations in the Method of Moments .....</b>	<b>8</b>
E. Ubeda, J. M. Tamayo, and J. M. Rius	
<b>On the Fully Analytical Integration of Singular Double Integrals Arising from the Integral Equation Methods .....</b>	<b>13</b>
M. Taskinen	
<b>On the Numerically Exact Integration of Singular Galerkin Impedance Matrix Elements in Computational Electromagnetics.....</b>	<b>19</b>
A. G. Polimeridis and J. R. Mosig	
<b>Approximate Methods for Solving Electromagnetic Coupling in Electrically Large Cavities .....</b>	<b>20</b>
I. Junqua and P. Degauque	
<b>Unscented Transform and Stochastic Collocation Methods for Stochastic Electromagnetic Compatibility .....</b>	<b>24</b>
S. Lallechere, P. Bonnet, I. El Baba, and F. Paladian	
<b>TLM Modeling of Thin Wires in Dispersive Media.....</b>	<b>30</b>
G. Verissimo, J. L. Dubard, M. Ney, and C. Pichot	
<b>Fast Pattern Synthesis for Focal Plane Arrays Using an Iterative Gram-Schmidt Orthogonalization .....</b>	<b>34</b>
A. Zamanifekri and A. B. Smolders	
<b>Direct Image Formation with Current Distributions Generated by Shooting and Bouncing Rays .....</b>	<b>38</b>
T. F. Eibert and H. Buddendick	
<b>A High Performance Physical-Optics Clutter Simulator with On-the-Fly Mesh Generation .....</b>	<b>39</b>
S. Hegler, R. Hahnel, and D. Plettemeier	
<b>Effect of Medium Parameters on RCS of Conducting Targets for Horizontal Polarization.....</b>	<b>43</b>
H. El-Ocla	
<b>Nonlinear/Electromagnetic Co-Design of MIMO and UWB Radio Links .....</b>	<b>47</b>
D. Masotti, A. Costanzo, F. Matri, M. Aldrigo, and V. Rizzoli	
<b>Optimal Location of Multi-Antenna Systems Using a Conjugate Gradient Method .....</b>	<b>53</b>
M. Zoppi, C. Dedeban, C. Pichot, S. Selleri, and G. Pelosi	
<b>Analysis of Double-Negative Materials with Surface Integral Equations and the Multilevel Fast Multipole Algorithm .....</b>	<b>57</b>
Ö. Ergül and L. Gürel	
<b>Computational Electromagnetic Solutions for Large-Scale Conductors, Left-Handed Metamaterials and Plasmonic Nanostructures .....</b>	<b>61</b>
F. Obelleiro, J. M. Taboada, M. G. Araujo, and L. Landesa	
<b>Optical Aspects of the Interaction of Focused Beams with Plasmonic Nanoparticles.....</b>	<b>66</b>
K. Şendur	
<b>Some Computational Aspects of Too Sharp Edges.....</b>	<b>70</b>
H. Wallen and J. Kataja	
<b>Nonlinear Wave Propagation in Negative Index Metamaterials.....</b>	<b>75</b>
N. L. Tsitsas and D. J. Frantzeskakis	

<b>Investigating the Composite Step Biconjugate A-Orthogonal Residual Method for Non-Hermitian Linear Systems in Electromagnetics .....</b>	<b>80</b>
Y. Jing, T. Huang, B. Carpentieri, and Y. Duan	
<b>A Novel Family of Iterative Solvers for Method of Moments Discretizations of Maxwell's Equations .....</b>	<b>85</b>
B. Carpentieri, Y. F. Jing, T. Z. Huang, W. C. Pi, and X. Q. Sheng	
<b>A Parallel Sparse Solver and Its Relation to Graphs .....</b>	<b>91</b>
M. Manguoglu	
<b>Utilization of CUDA-OpenGL Interoperability to Display Electromagnetic Fields Calculated by FDTD .....</b>	<b>95</b>
V. Demir and A. Z. Elsherbeni	
<b>Hardware Accelerated Computing for Electromagnetics Applications.....</b>	<b>99</b>
O. Kilic, E. El-Araby, and V. Dang	
<b>High Performance Finite Elements for the Electromagnetic Characterization of Metamaterials and Antenna Arrays .....</b>	<b>105</b>
A. Barka and F. X. Roux	
<b>Some Additional Warnings on the Reliability of Simulators for Time-Harmonic Electromagnetic Problems Involving Innovative Media.....</b>	<b>109</b>
P. Fernandes and M. Raffetto	
<b>Efficient Method of Moments Analysis of Infinite and Finite Arrays of Magnetic Nanoclusters in the Optical Frequency Range.....</b>	<b>115</b>
N. Ozdemir, C. Simovski, D. Morits, and C. Craeye	
<b>Electromagnetic Characterization of Barium Ferrite Thick Film Samples in the K<sub>a</sub> Band.....</b>	<b>118</b>
L. Jakab and T. Berceli	
<b>Full-Wave Analysis of Electrically Large Structures on Desktop PCs .....</b>	<b>122</b>
B. Kolundzija, M. Tasic, D. Olcan, D. Zoric, and S. Stevanetic	
<b>Hybrid MPI/OpenMP Parallelization of the Explicit Volterra Integral Equation Solver for Multi-Core Computer Architectures .....</b>	<b>128</b>
A. Al-Jarro and H. Bağcı	
<b>Towards a Scalable Parallel MLFMA in Three Dimensions .....</b>	<b>132</b>
B. Michiels, J. Fostier, I. Bogaert, P. Demeester, and D. De Zutter	
<b>Accuracy and Efficiency Considerations in the Solution of Extremely Large Electromagnetics Problems.....</b>	<b>136</b>
L. Gürel and Ö. Ergül	
<b>Electromagnetic Scattering Models of Layered Random Rough Surfaces and Their Role in Addressing Some of the Grand Challenges of Climate Research.....</b>	<b>140</b>
M. Moghaddam, X. Duan, Y. Goykhman, and A. Tabatabaeenejad	
<b>PSTD-Based Approach to a Large-Scale Inverse Scattering Problem.....</b>	<b>145</b>
C. Statz, G. Arnold, S. Hegler, D. Plettmeier, A. Herique, and W. Kofman	
<b>Finite-Difference Time-Domain Diakoptic Strategies .....</b>	<b>149</b>
R. Kastner	
<b>Truncated Multigrid Versus Pre-Corrected FFT/AIM for Bioelectromagnetics: When is <math>O(N)</math> Better Than <math>O(N\log N)</math>? .....</b>	<b>153</b>
K. Yang, F. Wei, and A. E. Yilmaz	
<b>Interpolatory Methods for Efficient Computation of Layered Media Green's Functions.....</b>	<b>159</b>
D. R. Wilton
