

2012 IEEE Bipolar/BiCMOS Circuits and Technology Meeting (BCTM 2012)

**Portland, Oregon, USA
30 September – 3 October 2012**

**IEEE Catalog Number: CFP12BIP-PRT
ISBN: 978-1-4673-3020-6**

Table of Contents

Characteristics of GaAs Spike Doped Collectors

Peter Zampardi

A Circuit-Based Approach for the Compensation of Self-Heating-Induced Timing Errors in Bipolar Comparators

Kyle Webb

A Study of SiGe Signal Sources in the 220-330 GHz Range

Sorin Voinigescu

A Low Phase Noise Colpitts VCO for Ku-band applications

Domine Leenaerts

HBT device robustness against process variations in millimeter-wave BiCMOS technology

Gregory AVENIER

A Clock Phase Adjustment Circuit for Synchronizing Multiple High-Speed DEMUXs

Rahul Shringarpure

Thin-film Silicon Technology for Highly-Efficient Solar Cells

Rene van Swaaij

Double-Polysilicon Self-Aligned SiGe HBT Architecture Based on Nonselective Epitaxy and Polysilicon Reflow

Hans Mertens

Long-Term Reliability of High-Performance SiGe:C Heterojunction Bipolar Transistors

Gerhard Fischer

Extrinsic Base Resistance Optimization in DPSA-SEG SiGe:C HBTs

Elodie Canderle

SFDR Considerations for Current Steering High-Speed Digital to Analog Converters

Mohammad Mahdi Khafaji

Innovative Architectures for Advanced Handset Power Amplifier Performance

Peter Wright

47-77 GHz and 70-155 GHz LNAs in SiGe BiCMOS Technologies

Gang Liu

Systematic Large-Signal Verification Procedure for mm-wave SiGe Bipolar Transistors

Jaap Essing

An overview on the state-of-the-art of Carbon-based radio-frequency electronics

Michael Schroter

Considerations for Forward Active Mode Reliability in an Advanced Hetero-Junction Bipolar Transistor

jonggook kim

Extraction of the emitter related space charge weighting factor parameters of HICUM L2.30

using the Lambert W function * + *

Felix Stein

Fast noise extraction method, using only standard DC and S-parameter measurements , \$

Evelyne Gridelet

Modeling Collector Current Noise PSD of SiGe HBTs Including Self-Heating and Non-Quasi-Static Effects , (

Anjan Chakravorty

On-Die Self-Heating of Mixer Image-Rejection Ratio for Mixed-Signal Electronic Systems , ,

Subramaniam Shankar

A Broadband 1.33 THz GBP 120-mW Common-Collector Feedback Amplifier in SiGe Technology - &

Ahmed Gharib

State-of-the-art and Future Perspectives in Calibration and De-Embedding Techniques for Characterization of Advanced SiGe HBTs featuring sub-THz f_T/f_{MAX} - *

DERRIER NICOLAS

Temperature and geometry dependence of the electrothermal instability of bipolar transistors %\$(

Andries Scholten

4 × 24 Gb/s 2^7 - 1 PRBS Generator Using 1.8 V MOS-HBT Quasi-CML Logic %\$,

Victor Kozlov

Terahertz Detector Arrays in a High-Performance SiGe HBT Technology %&

Richard Al Hadi

Best Practices to Ensure the Stability of SiGe HBT Cascode Low Noise Amplifiers %%*

Robert Schmid

A Novel Ccb and Rb Reduction Technique for High-Speed SiGe HBTs %&\$

Peng Cheng

Design and Analysis of New Silicided Nano Crystal Dots Field Programmable ESD Protection Structures in BiCMOS %&(

Albert Wang

Examination of Horizontal Current Bipolar Transistor (HCBT) with Double and Single Polysilicon Region %&,

Tomislav Suligoj

Characterization of Mutual Heating inside a SiGe Ring Oscillator % &

Mario Weiß

From the future to the mainstream, has GaAs reliability finally come of age? % *

William Roesch

Co-integration of high-performance and high-breakdown SiGe HBTs in a BiCMOS technology %&()

John Pekarik

Impact of the Emitter Charge on RF Noise of Junction Bipolar Transistors %&(-

Francesco Vitale

Dynamic electrothermal analysis of bipolar devices and circuits relying on multi-port positive fraction Foster representation

Vincenzo d'Alessandro

A Highly Efficient Watt-level SiGe BiCMOS Power Amplifier with Envelope Tracking for LTE Applications

Ruili Wu

High Speed Op Amps: Performance, Process and Topologies

JoAnn Close

A V-band Differential SiGe VCO With Varactor-less Tuning

Saeed Zeinolabedinzadeh

Differential Signal Source Chips at 150 GHz and 220 GHz in SiGe Bipolar Technologies Based on Gilbert-Cell Frequency Doublers

Christian Bredendiek

A SiGe BiCMOS Cascode Power Amplifier with Monolithic SOI Envelope Modulators for High-Efficiency Envelope Tracking

Ruili Wu

Low-Cost, High-Voltage SiGe:C HBTs for a 0.18 μm BiCMOS Process

Dieter Knoll

Living Chips and Chips for the Living

Ronald Dekker

Heterogeneous BiCMOS technologies and circuits and the DARPA Diverse Accessible Heterogeneous Integration (DAHI) program

Sanjay Raman

MEMS Module Integration into SiGe BiCMOS Technology for Embedded System Applications

Mehmet Kaynak
