

# **2013 IEEE Global Engineering Education Conference**

**(EDUCON 2013)**

**Berlin, Germany  
13 – 15 March 2013**

**Pages 1-691**

**IEEE Catalog Number: CFP13EDU-PRT  
ISBN: 978-1-4673-6111-8**

Global Engineering Education Conference (EDUCON), 2013 IEEE

Table of Contents

Title	Page range
TRIZ method and remote engineering approach	1–4
Attendance, performance and culture – Experience of the School of Engineering, Nazarbayev University	5–10
Functional Dissection of Electronic Power Systems as Learning Technique	11–15
ReProTool Version 3.0 – The Faculty Module for Designing and Enhancing University Programmes to Comply with the ECTS Label	16–22
A Novel FPGA Educational Paradigm using the Next Generation Programming Languages, Case of an Embedded Systems Course	23–31
A Reusable Remote Lab Infrastructure for Teaching Electronics with a Self-Configurable User-Interface	32–37
Quality Function Deployment Application in the Accreditation of Engineering Programs	38–43
Teaching Information Security Courses in Regular and Distance Learning programs	44–50
Using Learning Methodology that promotes Portable Interdisciplinary Accountability in Engineering Education	51–58
From Boxes to Bees: Active Learning in Freshmen Calculus	59–68
Remote Wireless Communications Lab in Real Time	69–74
Interactive Engagement Methods in Teaching Electrical Engineering Basic Courses	75–84
Competence model for informatics modelling and system comprehension	85–93
Analysis of user interests in context of web 2.0 technologies	94–99
The teaching of logic as a tool to enhance mathematics learning in technical courses for workers	100–105
Analysis of Program Outcomes in Project BEE - Outreach Together 2012	107–111
Teaching Strategies for Undergraduate Laboratories with Heterogeneous Prior Knowledge of Students	112–117
'Learning by doing' - Improving academic skills	118–122
Using Lab Experiments in Electric Circuits to Promote Achievements in Mathematics	123–129
Teaching Ethical Hacking in Information Security Curriculum: A Case Study	130–137
Teaching Information Theory via a Simulation Tool for Communications Systems	138–145
Applications in Teaching Statistical Quality Control with Different R Interfaces	146–155
An Analysis of Conversations in Role-Play Training for Project Management Education	156–161
A Method for Evaluating Project Management Competency Acquired from Role-Play Training	162–170
Enhance Student's Preparation for Laboratory Courses Regarding Embedded Systems' Basics	171–175
Youth development training in scientific engineering in senior classes of a German "Gymnasium" – A blended-learning course on "Smart Materials" on the basis	176–182
Analysis of the Foreign Languages and Cultures training and its importance in French Engineering Education	183–189

Global Engineering Education Conference (EDUCON), 2013 IEEE

Table of Contents

Title	Page range
Training Sessions in a Master Degree "Informatics as a Second Competence"	190–199
E-Assessment meets Personalization	200–206
Intensifying learner's experience by incorporating the virtual theatre into engineering education	207–212
Research-based coaching of academic staff as means to improve Engineering Education.	213–219
Competence test regarding a competence model: results of a test in upper secondary education for the domain of logic programming	220–226
A Multidisciplinary Project in Remote Physiological Systems Laboratory	227–230
Increasing High School Girls Awareness of Computer Science through Summer Camp	231–237
Actively linking learning outcomes and competencies to course design and delivery: experiences from an undergraduate Information Systems program	238–246
Assessment of Teaching Results at Technical University	247–252
Mockup Didactic Set for Students Development in Automotive Electronic	253–257
Supporting Computing and Technology distance learning students with developing argumentation skills	258–267
Swiping fingers on a screen is not enough! Dusting off toy blocks to build new gaming experiences through mobile apps	268–272
Defining Performance Indicators for the Assessment of ABET Student Outcomes	273–281
Development of an Evaluation Board for Education in Microcontrollers	282–286
Choosing the right LMS: A performance evaluation of three open-source LMS	287–294
Hands-on Improvements for Efficient Teaching Computer Science Students About Hardware	295–302
Topic-Driven Semi-Automatic Reorganization of Online Discussion Forums: A Case Study in an E-Learning Context	303–310
Synergy effect in GUI usability and accessibility education improvement	311–317
A Didactic Platform to Study of CAN FD Bus	318–326
Experiences, assesment and future perspectives of cooperation between LUT university and ICT industry	324–328
Measuring Propensity for Lifelong Learning: Comparing Chinese and U.S. Engineering Students	329–334
The laboratory in your hand - Making remote laboratories accessible through mobile devices	335–344
Where have all the inventors gone? Fostering Creativity in Engineering Education with Remote Lab Learning Environments	345–351
Multiple Choice Assessments: Evaluation of Quality	352–355
Using Improvisational Theater in Team-Based Teaching Activities	356–361
A Case Study to Investigate Different Types of Intrinsic Motivations Using e-Learning System	362–366
Using Mobile Technology for Fostering Intellectual Engagement: A High School Project	367–374

## Global Engineering Education Conference (EDUCON), 2013 IEEE

# Table of Contents

Title	Page range
Development and Implementation of an Immersive Environment in Higher Education	383-388
Combining Project Based Learning with exercises in problem solving in order to train analytical mathematical skills	383-388
Promoting Social Entrepreneurship Skills through MIS courses	394-399
Using Innovative Pedagogical Practices in Disciplines of Engineering and Computing Graduation in Brazil	394-399
Unisuite: An Innovative Integrated Suite for Delivering Synchronous and Asynchronous online Education	400-404
Teaching Graphical Communication to First year Engineering Students	405-409
Using Information and Communication Technologies in Language Teaching and Learning in the Institute of Physics and Technologies, Tomsk Polytechnic University	410-414
Cross-cultural Active Learning: Results from Americans Teaching in China	415-421
On Optimality of Teaching Quality for a Mathematical Topic Using Neural Networks (With a Case Study)	422-430
Teaching of Fourier Series Expansions in undergraduate education	431-435
Self-video recording for the integration and assessment of generic competencies	436-441
OLAREX project: Open Learning Approach with Remote Experiments	442-450
The Design and Implementation of Intelligent Assessment Management System	451-457
Virtualization environment in Telematics labs	458-465
Implementation of Mutual Recognition and Voluntary Standardization via Sharing of Expertise in Education of Electrical Engineers	466-471
The development of future engineers' intellectual competence in the information society.	472-473
Teaching database design. A reverse engineering approach.	474-480
Remote Lab Experiments in Analog Electronics in the framework of RIPLECS project	486-491
Assessment of learning outcomes in computing studies	486-491
Using Social Networks at University: the case of School of Computer Science	492-496
Development of tangible experiments for motivating undergraduate students	497-506
A Combined Cognitive Multimedia Model for Children with Down Syndrome	507-512
Experiencing a Web-based Audience Response System in Engineering Lectures	513-519
Implementation of high-definition lecture recording system for daily use	520-525
Defining and Assessing Program Educational Objectives for ABET Accreditation	536-539
Interdisciplinary Web-Based Learning Practices in Higher Education	536-539
Data Warehousing in the Context of a Bologna Undergraduate Degree	540-544

## Global Engineering Education Conference (EDUCON), 2013 IEEE

# Table of Contents

Title	Page range
Quality Management System for Vocational Education and Training	552–559
Competence Based Approach to Learning	560–565
Engineering Innovative Mobile Computing Curriculum	566–572
Engineering Education in Spain: One year with the Bologna Process	573–580
Online Process of Instruction Reflecting Learning Styles	581–590
Teaching Technology with CLIL methodology: A case study	591–596
Knowledge Discovery from University Information Systems for Purposes of Quality Assurance Implementation	597–601
FLExperiment – Research-based Learning Format	602–607
Enhancing Cybersecurity Learning through an Augmented Reality-based Serious Game	608–611
Software and Web Applications Security: State-of-the-Art Courseware and Learning Paradigms	612–617
Supplementary Laboratory in Digital Circuit and Logic Design Course for Pre-service Vocational Teacher in Thailand	618–626
Given more autonomy to computer engineering students: are we ready?	627–630
Comprehensive virtual mathematics training	631–638
Development and Marketing of a Short Wave Transmitter as an Interdisciplinary Student Project	639–643
Measuring the useful skills in a training programme	644–647
Application of computer aided design (CAD) systems for development of electronic educational courses for engineering disciplines in engineering higher	648–651
Engineering Outreach Programs at the Public University of Navarre: A Holistic Approach	652–655
Generic Processor for Unified Computer Engineering Learning Platform	656–663
The introduction of a topic on accesibility in several engineering degrees	664–673
Distributed Personal Learning Environments: Towards a Suitable Architecture	674–682
A Portable Solution for Microcontroller Laboratories	683–686
eLearning module for Study on Consequence Analysis in Chemical Process Industry	687–691
miniLABs: Drop in and become fascinated by engineering experiments	N/A
Providing automated remote access to the telecommunications laboratory at Plovdiv University for the needs of the RIPLECS project	698–703
Remote Labs Access in Multimedia for Information and Communication Systems	704–707
Interactive Didactical Tools for e-Learning in a Communication Systems Course	708–715
An Approach to Complement Electronics Courses using Virtual Environment	

## Global Engineering Education Conference (EDUCON), 2013 IEEE

# Table of Contents

Title	Page range
An Affordable on-site and Remote Laboratory Solution for a Course in Modern Digital Design	716–722
Private Study with Search Engine Support - Examination Papers	723–728
A didactic engineering approach for teaching mathematics to students in a technical institute	730–735
Architecture of e-Assessment Cloud Solution	736–743
Team Formation Process Automatization	744–750
Artificial Intelligence-Based Student Learning Evaluation Tool	751–756
Addressing low cost remote laboratories through federation protocols: fish tank remote laboratory	757–762
Modeling a TN Earthing System using Labview	763–768
Personalised Learning Spaces and Federated Online Labs for STEM Education at School	769–773
Virtual Laboratory for Teaching Calculus: an Immersive Experience	774–781
Implementing Intelligent Pedagogical Agents in Virtual Worlds: Tutoring Experiments in OpenWonderland	782–789
Teachers' support using interaction analysis and visualization tools in educational group blogging	790–797
Virtual and remote labs in higher education distance learning of physical and engineering sciences	798–807
Widget and Smart Devices. A Different Approach for Online Learning Scenarios	808–812
HCI requirements for an educational toolset using Digital TV infrastructure: a case study	813–819
Computer Support for Phrases Translation	820–826
Life is Engineering Program: Impact of an Engineering Outreach Project in K-12	827–833
Recruiting the right engineering students	834–839
Classroom Response Systems in Higher Education: Meeting User Needs With NetClick	840–846
Design of a flexible architecture for characterization of active and passive microwave components (patch antenna, filters, couplers and amplifier stage) in a	847–853
unX- A Ibero-American Community for Digital Entrepreneurship	854–859
An XML modular approach in the building of remote labs by students: a way to improve learning	859–864
Remote electronic laboratory development and evaluation in higher technological education	865–870
Visualizing students' participation in social media enhanced learning environment	871–879
Application of Mobile Devices and Remote Experiments for Physics Teaching in Elementary Education	880–885
An Edutainment System for Assisting Qatari Children with Moderate Intellectual and Learning Disability through Exerting Physical Activities	886–892
Visualizations of user data in social media enhanced web-based environment in higher education	893–899

Global Engineering Education Conference (EDUCON), 2013 IEEE

Table of Contents

Title	Page range
Texts of Art, Science and Culture: An interdisciplinary course in Engineering Curriculum	900–905
Summarized evaluation of optimizing workload by implementing an ECTS-barometer	906–909
Multilinear Decomposition Application into Students' Evaluation of Teaching Effectiveness	910–916
Evaluating the Students' Perception of the Teaching Effectiveness in a Teleinformatics Engineering	917–923
Designing a blended-learning Bachelor's degree in electrical engineering for non-traditional students	924–927
Lab-by-Wire: Fully Web-based Hands-on Embedded Systems Laboratory	928–933
Digital Proficiency and Digital Inclusion	934–939
Formative Criterion-based Assessment for Moodle Quizzes using Intelligent Computing	940–946
Correlates of students' attendance to class, participation and performances in engineering modules	947–951
Comparative analysis of two instructional strategies and their impacts on selected university engineering students' performances in particle technology	952–958
Invention of Knowledge in TRIZ-based Education	959–964
Increase teacher's presence and immediacy in slide videos	965–972
Quality Assessment of Technical Education In Indian Engineering Institutions	973–977
Using Models, Simulation and Measurements for Teaching Circuit Design	978–983
Adaptation of International Engineering Students in Project Based Learning Environment: A Transformative Learning Experience	984–989
Assessing Engineering Learning: Formative, Summative and Dialogical	990–995
Problem Conditioning Interpolation Educational Tool	996–1003
Elite Engineering Program in Tomsk Polytechnic University – the way to attract talented students into Engineering	1004–1008
Towards a virtualized Internet for computer networking assignments	1009–1014
EDUCache Simulator for Teaching Computer Architecture and Organization	1015–1022
Individual learning path modeling on the basis of generalized competencies system	1023–1026
Development of modular virtual lab for introductory computing courses	1027–1031
Reexamining the Titanic with Current Accident Analysis Tools: Multidisciplinary education and system safety primer for engineering students	1032–1041
Taking on the Challenge: Evaluating the benefits of participating in solar vehicle racing	1042–1048
Interfolio - An Interoperable System of Digital Portfolios	1049–1054
Benefit of e-learning teaching C-programming and software engineering in a very large mechanical engineering beginners class	1055–1061
Objective Standard Setting for Project Design course in Universiti Kebangsaan Malaysia	1062–1065

## Global Engineering Education Conference (EDUCON), 2013 IEEE

# Table of Contents

Title	Page range
Desktop Vr Systems - A Distance Learning Method and Technology	1066–1069
Educational experiences in electric machine fault diagnosis teaching	1070–1075
Learning with computer games or teacher: How it influences the learning experience and outcomes of primary school children	1076–1083
Using games as a context for interdisciplinary learning: A case study at a Scottish primary school	1084–1092
Multidisciplinary laboratory experiment for active vibration control with piezoelectric patches	1093–1097
Special Session: Remote-Labs Access in Internet and Performance Learning Environment Projects	1098–1102
Improving Clinical Practice Outcomes for Nurses with an Interactive Emulator	1103–1108
Using a Remote Lab for Teaching Energy Harvesting Enhanced Wireless Sensor Networks	1109–1117
A cluster-based analysis to diagnose students' learning achievements	1118–1123
Remote ECAD Laboratory Access for the MSc Course 'Advanced Electronics for Information and Communication Systems'	1124–1129
An online laboratory for SLA Management	1130–1136
Labicom.net – the on-line laboratories platform	1137–1140
Recent Trends in Online Multimedia Education for Heterogeneous End-User Devices Based on Scalable Video Coding	1141–1146
Integrating Open Services for Building Educational Environments	1147–1156
From Individual Remote Access Laboratory Implementations to Institutional Learning Tools	1157–1163
Remote Triggered Analog Communication Electronics Laboratory for e-Learning	1164–1170
IT implementation in the educational process of future engineers through the project activities and competences assessment	1170–1176
A Network and Repository for Online Laboratory, based on Ontology	1177–1189
Mapping content plans into learning activities: Organizing a portfolio of e-learning activities for teaching emergent knowledge	1190–1199
Exploring complex remote laboratory ecosystems through interoperable federation chains	1200–1208
ePBL: Design and Implementation of a Problem-based Learning Environment	1209–1216
Smart device paradigm, Standardization for Online Labs	1217–1221
Design of Electronics Circuits Practices for an Online Master Degree Program Using VISIR	1222–1227
Efficient access to multimedia resources in distributed systems of distance learning	1228–1231
Learning Analytics @ UC3M	1232–1238
Multimedia Strategies for Dissemination of Science and Technology	1239–1242
Assessment of Engineering Professional Skills	1243–1248

## Global Engineering Education Conference (EDUCON), 2013 IEEE

### Table of Contents

<b>Title</b>	<b>Page range</b>
Mining student repositories to gain learning analytics. An experience report	1249–1254
E-Learning Standards and Learning Analytics. Can Data Collection Be Improved by Using Standard Data Models?	1255–1261
OCW-S: enablers for building sustainable. Open Education Evolving OCW and MOOC	1262–1271
LabSocket Technologies in Remote Engineering and Education	1272–1275
Requirements Compliance as a Measure of Project Success	1276–1283
A Teaching Experience on Software Reengineering	1284–1293
Exposing Students to the Unfamiliar – Improving Software Engineering Teaching in Non-Major Computer Science Programs	1294–1298
The Furtherance of Motivation in the Context of Teaching Software Engineering	1299–1304
Teaching Finite State Machines with Case Method and Role Play	1305–1312
Using Flowchart-based Programming Environments for Simplifying Programming and Software Engineering Processes	1313–1322
openHPI - a Case-Study on the Emergence of two Learning Communities	1323–1331
Enhancing Laboratory Experience and Assessment through Monitoring and Processing of Students' Activities	1332–1337
Excellence Model for Indian Engineering Institutions	1338–1341
Contribution to Online Laboratory Implementation and Standardization	1342–1346
