2013 23rd International Workshop on Power and Timing Modeling, Optimization and Simulation

(PATMOS 2013)

Karlsruhe, Germany
9-11 September 2013

IEEE

IEEE Catalog Number: CFP13PAT-POD
ISBN: 978-1-4799-1169-1

Table of Contents

Table of Contents i
Welcome Message v
List of Organizers and Technical Program Committee (TPC) Members vi

Keynotes

Design of Future Integrated Systems: A Cyber-physical Systems Approach ix
Radu Marculescu

Hardware reliability of embedded systems: are we there yet? x
Bashir M. Al-Hashimi

Sub-Threshold Operation and Variability

Maximizing Yield in Near-Threshold Computing under the Presence of Process Variation . 1
Nathaniel A. Conos, Saro Meguerdichian, Sheng Wei and Miodrag Potkonjak

Ultra Low-Power Standard Cell Design using Planar Bulk CMOS in Subthreshold Operation 9
Marc Pons, Jean-Luc Nagel, Daniel Séverac, Marc Morgan, Daniel Sigg, Pierre-François Rüedi and Christian Piguet

Empirical Verification of Fault Models for FPGAs Operating in the Subcritical Voltage Region 16
Alex Birklykke, Peter Koch, Ramjee Prasad, Lars Alminde and Yannick Le Moullec

Variability analysis of Self-Timed SRAM robustness 24
Frank Burns, Abdullah Baz, Delong Shang and Alex Yakovlev

A Variation Tolerant Architecture for Ultra Low Power Multi-processor Cluster 32
Daniele Bortolotti, Davide Rossi, Andrea Bartolini and Luca Benini

A learning tool MOSFET model - A stepping-stone from the square-law model to BSIM4 . 39
Kjell Jeppson

Towards Cross Abstraction Level Power Closure

The Semantic of the Power Intent Format UPF: Consistent Power Modelling from System Level to Implementation 45
Juergen Karmann and Wolfgang Ecker

Enabling Energy-Aware Design Decisions for Behavioural Descriptions Containing Black-Box IP-Components 51
Lars Kosmann, Daniel Lorenz, Axel Reimer and Wolfgang Nebel

Power Contracts: A Formal Way Towards Power-Closure?! 59
Gregor Nitsche, Kim Gruettner and Wolfgang Nebel

Formal System-on-Chip Verification: An Operation-Based Methodology and its Perspectives in Low Power Design 67
Joakim Urdahl, Shrinidhi Udupi, Dominik Stoffel and Wolfgang Kunz

System-level Power and Thermal Management

Optimizing the Configuration and Control of a Novel Human-Powered Energy Harvesting System 75
Vishwa Goudar, Zhi Ren, Paul Brochu, Qibing Pei and Miodrag Potkonjak

Power saving policies for multipurpose WBAN 83
Filippo Casamassima, Elisabetta Farella and Luca Benini

Applying of Quality of Experience to System Optimisation 91
Sascha Bischoff, Andreas Hansson and Bashir M. Al-Hashimi

On-line Thermal Emulation: How to speed-up your thermal controller design 99
Francesco Beneventi, Andrea Bartolini and Luca Benini

Evaluating the Impact of Substrate on Power Integrity in Industrial Microcontrollers 107
Marco Cazzaniga, Patrice Joubert Doriol, Emmanuel Blanc, Valentino Liberali and Davide Pandini

An Assessment of Software Lifecycle Energy 112
Vasily G. Moshnyaga

Microarchitectures and NoCs

Design of Variable Latency Adder Based On Present and Transitional States Prediction .. 120
Xinghua Yang, Fei Qiao, Chang Liu and Huazhong Yang

SET Propagation in Micropipelines 126
Thomas Polzer and Andreas Steininger

Evaluation of Hop Count Advantages of Network-Coded 2D-Mesh NoCs 134
Michael Vonbun, Stefan Wallentowitz, Michael Feilen, Walter Stechele and Andreas Herkersdorf

Compiling for Performance and Power Efficiency 142
Ewerton Daniel de Lima, Tiago Cariolano de Souza Xavier, Anderson Faustino da Silva and Linnyer Beatryz Ruiz

Circuit Monitoring and Characterization

Reliability Monitoring of Digital Circuits by in situ Timing Measurement 150
Nasim Pour Aryan, Georg Georgakos and Doris Schmitt-Landsiedel

A Single Built-in Sensor to Check Pull-up and Pull-down CMOS Networks against Transient Faults 157
R. Possamai Bastos, F. Sill Torres, J.-M. Dutertre, M.-L. Flottes, G. Di Natale, B. Rouzeyre

Metastability Characterization for Muller C-Elements 164
Thomas Polzer and Andreas Steininger

Simulation and Modeling

Efficient Power Intent Validation Using Loosely-Timed Simulation Models 172
Fabian Mischkalla and Wolfgang Mueller

An Efficient Eye-Diagram Determination Technique for Multi-Coupled Interconnect Lines 185
Junghyun Lee and Yungseon Eo

Fast and Accurate Power Annotated Simulation: Application to a Many-Core Architecture 191
Thomas Ducroux, Germain Haugou, Vincent Risson and Pascal Vivet

Dynamic Voltage and Frequency Scaling

Methodology for Power Mode Selection in FD-SOI circuits with DVFS and Dynamic Body Biasing 199
Y. Akgul, D. Puschini, S. Lesecq, E. Beigne, P. Benoit and L. Torres

Coupled Voltage and Frequency Control for DVFS Management 207
M. Altieri, W. Lombardi, D. Puschini and S. Lesecq

Crown Scheduling: Energy-Efficient Resource Allocation, Mapping and Discrete Frequency Scaling for Collections of Malleable Streaming Tasks 215
Christoph W. Kessler, Nicolas Melot, Patrick Eitschberger and Jörg Keller

Low Power Design Methods in Emerging Technologies

Power Modeling and Characterization of Graphene-Based Logic Gates 223
Sandeep Miryala, Andrea Calimera, Enrico Macii and Massimo Poncino

Dynamic Electrothermal Macromodeling Techniques for Thermal-Aware Design of Circuits and Systems 227
A. Magnani, V. d'Alessandro, N. Rinaldi, M. de Magistris and K. Aufinger

Adaptive Routing and Dynamic Frequency Scaling for NoC Power-Performance Optimizations 231
Davide Zoni, José Flich and William Fornaciari

Poster Session

Power Consumption Analysis Using Multi-View Modeling 235
Carlos Gomez, Julien DeAntoni and Frédéric Mallet

A Fully Standard-Cell Delay Measurement Circuit for Timing Variability Detection 239
Alessandro Sassone, Massimo Petricca, Massimo Poncino and Enrico Macii

Automatic Implementation of Low-Complexity QC-LDPC Encoders 243
Georgios Tzimpragos, Christoforos Kachris, Dimitrios Soudris and Ioannis Tomkos

High Level Transforms to Reduce Energy Consumption of Signal and Image Processing Operators 247
H. Ye, L. Lacassagne, J. Falcou, D. Etiemble, L. Cabaret and O. Florent

Peak Power Demand Analysis and Reduction by Using Battery Buffers for Monotonic Controllers 255
Waqaas Munawar and Jian-Jia Chen

Design Methodology for Low-Power Embedded Microprocessors 259
Andrea Manuzzato, Fabio Campi, Valentino Liberali and Davide Pandini

A Framework with Temperature-Aware Accuracy Levels for Battery Modeling from Datasheets 265
Massimo Petricca, Donghwa Shin, Alberto Bocca, Alberto Macii, Enrico Macii and Massimo Poncino
