2013 IEEE PES Asia-Pacific Power and Energy Engineering Conference

(APPEEC 2013)

Kowloon, Hong Kong
8-11 December 2013

Pages 1-573

IEEE Catalog Number: CFP13PEE-POD
ISBN: 978-1-4799-2523-0

2013 IEEE PES Asia-Pacific Power and Energy Engineering Conference (APPEEC)

8 – 11 December, 2013
Kowloon Shangri-La Hotel
Hong Kong

Table of Contents

Paper Number	Paper Title
0006	A Simulation Study of Electric Vehicle Charging in Microgrids
0007	Differential Games based Load Frequency Control of Interconnected Power System
0008	What's the Difference between Traditional Power Grid and Smart Grid? - from Dispatching Perspective
0012	PMU-based Voltage Instability Detection through Linear Regression
0013	Field Studies for Transient Stability in Continuous Operation and Contingency Condition During 3-Ø Short Circuit at PCC for Grid Connected 10MW Kastina Wind Farm
0014	Emergency Control of Power Grid Based on Hybrid Particle Swarm Optimization
0015	Dynamic Modeling and Simulation of Distributed Static Compensators in System Impact Studies
0017	Verification Tests for DTS System Measure and Calculate Power Cable Temperature
0022	A Risk Assessment Method based on Multi-stage Overloading in Smart Distribution Network
0023	Research on a Mal-operation Case of Differential Protection in UHV Transformer
0025	The Important Role of Feature Selection when Clustering Load and Generation Scenarios
0027	Impact and Cost Evaluation of Electric Vehicle Integration on Medium Voltage Distribution Networks
0031	Generic SPWM Technique for Multilevel Inverter
0033	Risk-constrained Coordinative Dispatching for Battery Energy Storage Systems of Wind Farms
0034	An Improve MPP of PV Cells with Converter by using Passive Inductor and Capacitor for Comparative in both Continuous and Discontinuous

	Modes
0036	Inspiring Energy Conservation Through Open Source Metering Hardware and Embedded Real-Time Load Disaggregation
0038	The Research of Power Market Patterns Incorporation of Large-scale Wind Power
0039	Study on Effectiveness Evaluation of the Siting of DG Based on a TOPSIS Method-based Approach
0040	Arc Fault Generation and Detection in DC Systems
0041	Power System Probabilistic Production Simulation Containing Large-scale Wind Power and Photovoltaic Power
0042	Harnessing hydroelectric power using Savonius rotor coupled with asynchronous generator connected to grid
0044	Review of Transmission Network Planning in Market Environment
0046	Analysis for Large-scale Integration of PV system in Japan with a High Time-Resolution Optimal Power Generation Mix Model
0047	A Bayesian Network Approach for Human Reliability Analysis of Power System
0048	Risk-based Dynamic Security Assessment under Typhoon Weather for Power Transmission System
0049	Microchip Based Embedded System Design for Achievement of High Power Factor in Electrical Power Systems
0050	Probabilistic Evaluation of Oscillatory Stability Margin with Large-Scale Wind Generation
0051	The Impact of LVRT on the Transient Stability of Power System with Large Scale Wind Power
0052	Analysis of Doubly Fed Induction Generator Dynamic Action to Power Angle Oscillation
0053	Distributed Generation Planning in Distribution Network Based on Hybrid Intelligent Algorithm by SVM-MOPSO
0054	China's Valuable Experiences in Defending Large-scale and Long-time Blackouts
0055	The Comparison of Conductor Stress Calculation Methods for Overhead Line under Extreme Weather Conditions
0058	Mitigation of voltage Sags in CIGRE Low Voltage Distribution Network
0059	A study on swing and buckling of Y-type insulator strings under strong wind action for ±800kV UHDV transmission lines
0061	Model Validation of PV Power Generation Unit Based on Grid Voltage Disturbance Test

0062	A Novel Adaptive Loss of Excitation Protection Criterion Based on Steady-State Stability Limit
0063	Variable-speed Variable-pitch Coordinated Control Strategy of Wind Turbine Ramping Power
0065	Analysis and Control of Stochastic Power Fluctuations on the Tie-line of Interconnected Power Systems
0069	A Novel Substation Area Backup Protection for Smart Substation
0070	Internal Pricing Mechanism for Hierarchical Power Consumption/Generation Scheduling in Industrial Enterprise Microgird
0072	Voltage Change Based Fault Location in Distributed Network Considering Distributed Generations
0074	Stress Calculation Method for Overhead Line Conductors under Ice Overload Condition Considering Material Plasticity
0075	Profit Enhancement Through Optimized Operation of Photovoltaic Systems with Elastic Demand
0077	The value of using chance-constrained optimal power flows for generation re-dispatch under uncertainty with detailed security constraints
0079	Available Transfer Capacity Calculation Based on Carbon Emission Reduction Strategy
0081	Multi-level Control of Grid-tied DC Microgrids
0083	Transient Stability of a Distribution Network with DFACTS Devices and FSWT
0084	Oscillation Source Location Based on Abnormal Signal Analysis
0085	Impact of the Distributed Photovoltaic on the Current Protection of 10kV Distribution Network
0086	Modeling of Photovoltaic Generation Unit for Power System Studies
0087	Analysis of Human Reliability in Power System Switching Operation considering Dependency of Operators
0088	Comprehensive Energy-saving Potential Evaluation of Distribution Network Based on Analytical Hierarchy Process(AHP)
0089	A Survey on Bad Data Injection Attack in Smart Grid
0090	A Smart Monitoring and Control System for the Household Electric Power Usage
0092	Flatlands Wind Farm Power Generation and Wake Effect Analysis Based on Jensen Model
0093	Robust Current Control Design of Voltage Source Converter under Unbalanced Voltage Conditions
0094	The Application of Bayesian Network Theory in Transformer Condition

	Assessment
0095	Comprehensive Configuration of Wind Turbine and Switch Capacitor in Distribution Network Based on Bi-Level programming
0096	Power System Transient Stability Assessment Based on Online Sequential Extreme Learning Machine
0097	The Study of Technical Support System of Blackout Start for Guangxi Power Grid
0098	Distributed Photovoltaic Power Generation for Energy-Poor Households: The Nigerian Perspective
0099	Advanced ROCOF Protection of DFIG Wind Turbines
0100	Nondetection Index of Anti-Islanding Passive Protection of Synchronous Distributed Generators
0101	Detection of Broken Bars in Induction Motor Based on Multiple Coupled Circuit Model with Optimized Parameters
0102	Distribution network planning with a large amount of small scale photovoltaic power
0103	Protecting Modular Multilevel Converters (MMC) against AC Fault by Deadbeat Control
0104	A Prediction Technique of Power Transformer Condition Assessment via DGA Parameters
0105	Consensus-Based Droop Control Synthesis for Multiple Power Converters in Lossy Micro-Grids
0107	Reactive Power Optimization Considering the Probability of Voltage Violation Due to Wind Farm Connection
0108	A Fast and Effective EA for Service Restoration of Compensated Distribution Networks
0111	Analysis of Shaft Torque Amplification Caused by Interaction between AC and DC System
0112	A Hierarchical Control of Microgrid based on Droop Controlled Voltage Source Converter
0114	Transmission Line De-icing Outage Scheduling Based on Risk Assessment
0115	Load Frequency Control of Area Power System With Multi-source Power Generation Units Based on Differential Games Tracking Control
0116	Improved PSO Algorithm for Microgrid Energy Optimization Dispatch
0117	Photovoltaic Power Penetration Capacity Assessment Considering Static Voltage Stability
0118	Optimal Scheduling the Wind-Solar-Storage Hybrid Generation System

	Considering Wind-Solar Correlation
0120	Development of a novel asset management system for power transformers based on Ontology
0121	Maximum Power Point Tracking for Wind Generator System Using Sliding Mode Control
0122	WAMS-Based Transfer Capacity Assessment in Multi-machine Systems
0123	Development of a Cloud-based Renewable Energy Monitoring Platform
0124	Wind Power Prediction Model Considering Smoothing Effects
0127	Single Ended Primary Inductor Converter Reliance of Efficiency on Switching Frequency for use in MPPT application
0129	State-of-Charge Estimation of LiFePO4/C Battery Based on Extended Kalman Filter
0130	The Power Output Characteristics of Jiuquan Wind Power Base and Its Reactive Power Compensation
0131	A Transmission-Constrained Stochastic Unit Commitment Model with Real-Time Pricing for High Wind Power Integration
0132	Voltage Sensitivity Based Site Selection for PHEV Charging Station in Commercial Distribution System
0133	A Hybrid Decision Diagram Model for Service Restoration in Distribution System With Distributed Generations
0134	Transient Stability Constrained Optimal Power Flow Using 2-Stage Diagonally Implicit Runge-Kutta Method
0135	The Dynamic Characteristics of Photovoltaic Generation System Under Partially Shaded Conditions
0137	The Multiple Uncertainty Impact of Large-scale Grid-connected PV System on Available Transfer Capability Assessment
0138	Analysis and Calculation of the Instantaneous Power Based on A New Method of Load Identification
0139	Electric Grid Vulnerability Assessment under Attack-Defense Scenario Based on Game Theory
0140	New Possibilities in Field Testing of Distributed Protection Systems
0141	Impact of DFIG-based Wind Farm on Transient Stability of Single Machine Infinite Bus System
0142	Differentiated Configuration Method of Reactive Power Compensation for Distribution Systems
0143	Nonlinear Predictive Control for Active Power Filter
0145	Active Power Real-time Control Strategy for Wind Farms Coordinated with Power System

0146	Robust Current Control of Doubly Fed Wind Turbine Generator under Unbalanced Grid Voltage Conditions
0147	Characteristics of static voltage stability for distributed generation integrated into power system and its impacts analysis
0148	The impact of distributed wind power generation on voltage stability in distribution systems
0149	Online Monitoring and integrated Analysis System for EV Charging Station
0150	Economic Dispatch for Power Systems with Wind and Solar Energy Integration Considering Reserve Risk
0151	Multi-objective optimal power flow model for power system operation dispatching
0152	Impacts of communication failure on power system operations
0154	Real-time Simulation on Wind Power System Dynamics Incorporating STATCOM
0155	Coordinated Control of Battery Energy Storage System in a Microgrid
0156	Calculation of Reactive Power Compensation Capacity in Wind Farms Based on Chance Constrained Programming
0159	Calculation of Load Supply Capability for Distribution Networks with Distributed Generations
0161	A Novel Kind of Monitoring and Analyzing System for Digital Substation Functional Loop
0163	Dynamic Behavior of Photovoltaic Single-phase Inverter Following Faults in Medium-voltage Networks Using CRIEPI's Power System Simulator
0164	Research on Modeling and Appliance of a New Price Mechanism Demand Response
0166	The Study of Operating Overvoltage Suppression Measures in Black-Start Process Based on Conversion from BPA to PSCAD Component Models
0167	Improved Power Control of Photovoltaic Generation System under Unbalanced Grid Voltage Conditions
0168	Harmonic Current Suppression for Three Phase PV Generation System under Unbalanced Grid Voltage
0169	Reliability Assessment for Power Systems with Large-scale Renewable Energy Sources
0170	Hierarchical Control Architecture for Demand Response in Smart Grids
0171	The Unit Commitment Model with Wind Power Connection Based on Bad Operation Scenario Set

0172	Automatic Generation Control of Multi-Area System Using Two Degree of Freedom Fractional Order PID Controller: A Preliminary Study
0173	A combined phase selector element based on the superimposed sequence components for parallel lines on the same tower
0174	An Improved Droop Control Based on Complex Virtual Impedance in Medium Voltage Micro-grid
0176	Ground Leakage Current Elimination in a Transformerless Unipolar Modulation Based Single Phase Grid-Conne cted Phot ovoltaic Sys tem
0177	A Fuzzy Bi-objective Unit Commitment Model Considering Source-grid-load Interactions
0180	The research for distribution of reserve with large scale wind power connecting into system
0182	Study on The Equilibrium Dispatching Strategy in Microgrid Based on Replicator Dynamics Algorithm
0183	Reactive Power Coordinated Control at the Gateway between Provincial and Regional Power Grids
0184	Offshore Wind Resource Assessment Based on WRF Model
0185	Multi Time-scale Dynamic Models for Doubly-fed Induction Generator in DIgSILENT
0186	Conductor Selection of Transmission Line Connected to Wind Farm Considering the Operation Characteristic
0187	Key Technologies for Renewable Energy Integration- A Full Scale Demonstration at Hainan Island
0189	A Binary Formulation of SAIDI for the Predictive Reliability Assessment of Radial Distribution Systems with Tie-lines
0190	Reliability Analysis for Intelligent Proction System of Smart Substation
0191	Coordination Frequency Control Strategy Design of Wind Farm Base on Time Sequence control
0192	An Intelligent Real-Time Decision Support Tool for Power System Restoration
0193	Analysis of Travelling Wave Protection Criterion Performance for Double-circuit HVDC
0194	Guishan Off-Shore Wind Power Farm Interconnection: A Real Project Study
0196	On-Off based Charging Strategies for EVs Connected to a Low Voltage Distribution Network
0197	PSO-based Sugeno Fuzzy Logic Controller of Photovoltaic Generator for Frequency Stabilization in Stand-Alone Power System

0198	Potential for Cross-Taiwan Strait Transmission System Development
0199	The Review of Load Scheduling Model Research Based on Demand Response Method
0200	A Novel Highly Efficient Tank-Less Inverter for Renewable Energy Powered Applications
0201	Generalized Phase Compensation for PSS Design
0202	Fault Detection and Diagnosis of an HVAC System Using Artificial Immune Recognition System
0203	Distributed Communication-based Model Predictive Control for Long-term Voltage Instability
0204	Simultaneous Optimal Placement and Parameter-Tuning of SVC, TCSC and PSS Using Honey-Bee Mating Optimization
0205	Series Arc fault studies and modeling for a DC distribution system
0207	Power Transformer Condition Monitoring and Fault Diagnosis with Multi-agent System based on Ontology Reasoning
0209	Investigation on the Capacitive Characteristics of Single-phase Diode-bridge Converter Based Loads
0210	Economic Dispatch Solution Considering Demand and Wind Speed Uncertainties Based on Newton's Method
0213	An Operation Availability Index for the Evaluation of HVDC Transmission Reliability and Its Influence on the Power System
0214	An Economic Dispatch Model Considering the Volatility and Uncertainty of Wind Power
0215	Macro Demand Spatial Approach (MDSA) Combined with Principal Component Analysis and Qualitative Analysis on Spatial Demand Forecasting for Main Development Area in Transmission Planning
0216	Control and Performance of a Cascade Low-frequency High-power Multilevel Converter for SSR Mitigation
0217	Research on Summation Impedance Relay with Ability to Identify High-Resistance Ground Fault
0218	Ride-through for important auxiliary equipment drive inverter
0219	Strategies of Residential Peak Shaving With Integration of Demand Response and V2H
0220	Investigation of Capacity Decay due to Ion Diffusion in Vanadium Redox Flow Batteries
0221	Direct Virtual Power Control of VSC-HVDC for Starting Up of Offshore Wind Farm
0222	The Study on Effect of Random Maintenance Quality of Components on

	Composite Power System Reliability
0223	A New Parameters Identification of Single Area Power System Based LFC Using Segmentation Particle Swarm Optimization (SePSO) Algorithm
0224	Fast Identification of Inrush Current Using a Weighted Morphological Approach
0226	Identification of Current Transformers Saturation Intervals Using Morphological Gradient and Morphological Decomposition
0227	Saturation Detection of Current Transformers for Protection Blocking Based on Waveform Symmetry Using Morphological Skeleton
0228	Modeling of A Central Heating Electric Boiler Integrated with A Stand-alone Wind Generator
0229	Half Load-cycle One-cycle Control for Inverter
0230	Impacts of Wind Power Penetration on Risk Constrained Economic Dispatch
0231	A Probabilistic Model for Optimal Joint Allocation of Energy and Spinning Reserve Using Primal-Dual Interior Point Method
0232	Detection and Classification of Low-frequency Power Disturbances Using A Morphological Max-lifting Scheme
0233	NSDD and Substation Fire Incidents
0234	Distributed Generation Location Using Multi-Agent System for Reliability Assessment
0236	Validation for Compatible Modular Multilevel Converter Models using PSCAD/EMTDC
0237	Study of Sheath Circulating Current and Loss-reducing of 500kV Long-distance Submarine Cables
0238	Analysis of the NDZ formulation theory of active frequency shift islanding detection method for grid-connected PV system
0239	Impact of Large-scale Wind Power Integration on Grid Fault Identification and Real-time Decision-making Technologies in Stability Control Systems
0241	The impulse grounding impedance computation in HVDC transmission line tower
0242	Security Requirements for Smart Grid Services in Japan
0243	Research on methods of forecasting unburned carbon content in the fly ash from coal-fired power plant
0244	Multiple Data Fusion for Fault Diagnosis of Power Grid
0248	The Future Organization of Danish Electricity Market for Integrating

	DERs - A View of FlexPower Project
0249	Optimal Allocation of Spot Market and Bilateral Contract Transactions through Quantity Declaration Adjustments
0250	Analysis of the dc Dynamics of VSC-HVDC Systems Using a Frequency Domain Approach
0252	Coordinated Charging Strategy for Battery Switch Station Considering Battery Charging Characteristics
0254	Promoting Cable Ampacity by Filling Low Thermal Resistivity Medium in Ducts
0255	Analysis of Dynamic Reactive Power Demand Characteristics of Inverter Stations of Multi-infeed HVDC
0257	Online Strategy for Boiler Scheduling During the Blast Furnace Blowing Down
0258	State of Charge Estimation of an All-Vanadium Redox Flow Battery Based on a Thermal-Dependent Model
0259	Improved FRT Control Scheme for DFIG Wind Turbine Connected to a Weak Grid
0260	A Probabilistic Method of Operational Reserve Evaluation using Monte Carlo Simulation
0261	Intelligent Accident Treatment and Decision System Based on Centralized Control Center for Power System
0262	Interaction of Ethernet Traffic in Power Utility Communication Networks
0263	Adequacy Evaluation of Generating System Recognizing Random Fuzzy Wind Speed
0264	Identification of Photovoltaic Power System Based on Sensitivity Analysis
0267	Low Order Harmonics Minimization in Multilevel Inverters using Firefly Algorithm
0268	Smart Mobility for Green University Campus
0269	Carbon Reduction Impact Simulation of Cross-region Power Transmission in China
0270	Reliability Evaluation of Power Grids Considering Worm Spreading Pattern in SCADA
0271	Modeling and Optimization of Electric Vehicle Charging Load in a Parking Lot
0272	The Lightning Contingency Probability Analysis on Transmission Tower with Line Arresters Protection
0273	Optimal Placement of Protective Devices For Improving Reliability

	Indices in Microgrid System
0275	Fused Converter Topology for Wind-Solar Hybrid Systems
0277	Renewable Energy Portfolio Planning using the Cross-Entropy Method
0280	A Multi-Agent Based Self-Healing Smart Grid
0284	Realistic Integrated Grounding and Electromagnetic Interference Analysis Accounting for GIS, Cables and Transformers During Normal and Fault Conditions
0286	The Application of Heat Transfer Analysis in Condition Monitoring System of Wind Generator
0287	Application of ACSA to Solve Single/Multi Objective OPF Problem with Multi type FACTS Devices
0289	On managing the integration of large shares of renewables in electricity supply systems
0290	An economic, ecological and energetic assessment of battery electric, hybrid and fuel cell cars
0292	Study the Collapse of the High Voltage Wave Shape under AC Breakdown Voltage
0314	Voltage and Reactive Power Control Method for Distribution Grid
0316	The Challenges of Deploying Smart Metering in Hong Kong
0317	Application of Condition Monitoring Techniques in Managing the 11kV Switchgear in HK Electric
0318	A Fast Method of Voltage Stability Margin load for Limit Induced Bifurcation
0319	Experience with Partial Discharge Detection at High Voltage Gas Insulated Switchgear by Ultra High Frequency (UHF) Method
0320	Power Quality Mitigation Measures for Advanced Building Facilities
