

2015 IEEE Global Engineering Education Conference

(EDUCON 2015)

**Tallinn, Estonia
18-20 March 2015**

**IEEE Catalog Number: CFP15EDU-POD
ISBN: 978-1-4799-1909-3**

Table of Contents

Title	Page range
Starter-Project for First Semester Students to Survey Their Engineering Studies	1–4
Software Mangineeringment	5–11
Cultivation of Spatial Thinking with Multi-view Projection	N/A
Engineering Students' Attitude towards Engineering Ethics Education	16–22
Retaining Talent, Adressing Diverse Requirements: Academic Writing for Engineering Students	23–27
Active Learning in Remote Electrical Drive Laboratory	28–34
Effectiveness of Clickers on Student Learning of Large Group manufacturing Lectures	N/A
Project Based Engineering School (PBES): an implementation experience with very promising results	39–46
Mobile learning and its potential for engineering education	47–51
Developing ESP study materials for engineering students	52–57
Jigsaw for Problem Solving in Engineering Courses	58–62
Experimental Setup to Explore the Propulsion Motor Drive Testing for Battery Electric Vehicles	63–67
Turning a Basic Electronics Lab into a Low-Cost Communication Systems Lab	68–72
eLearning infrastructures for co-operative degree programmes in Europe	73–76
Assignments, Assessment and Feedback in Engineering Graphics Courses	77–82
A pressure cooker – coaching framework for teaching soft skills in engineering education	83–91
Knowledge Transfers between Research Consortium, Higher Education Institution and World of Work	92–101
Pedagogical Content Knowledge A Comparative Study between CS Pre-Service Teachers and Experienced Teachers	102–111
Design of Lab Exercises for Teaching Energy Efficient Digital Design	112–117
Mechatronics and robotics as motivational tools in remote laboratories	118–123
Knowledge Based Educational Framework for Enhancing Practical Skills in Engineering Distance Learners	124–131
Teaching Low Power Design with an FPGA based Hands-On and Remote Lab	132–140
Lecture Meets Laboratory - Experimental Experience for Large Audiences: Results of a First Implementation and Recommendations	141–144
Embedded Linux in Engineering Education	145–150
Development of new curriculum for Industrial Engineering Program that meets the curriculum requirements of the ABET and Institution	151–158
eCity: Virtual City Environment for Engineering Problem Based Learning	159–166
Continuum-focused Methodology for Information Systems Research and Development	167–175
Fit for Science - A course for teaching to organize, perform and present scientific work in engineering with mobile devices	176–183
Collaborative Learning with Cyber-physical systems	184–188
Five Years of the Pupils' Academy of Serious Gaming: Enhancing the ability to study	189–198
Remote Security Labs in The Cloud - ReSeLa	199–206
Curriculum development of higher engineering education by mass customization----A case study at Shaoxing University China	207–210
Development of a Pedagogical Content Knowledge Model for Computer Science Teacher	211–220
Implicit learning by means of a knowledge based engineering system	221–226
Designing Specialized Management Education for Egeiners: The Case of the Univetsity of Nicosia	N/A
Many faces of a logistician – findings from cluster analysis of university curricula in logistics	231–238
Engineering intelligent logistics – developing a competence model for logistics systems engineer	239–248
Be an Engineer right from the start	249–254
Pre-conditions for Efficient m-Learning	255–261
Virtual Internships as an Innovative learning technique	262–266
Unemployed engineering graduates. analysis and support	N/A
Integrating Engineering Workflow at Early Stages of Higher Education: The French Example	270–273
Effectiveness of Model-Driven Development Method in Conceptual Modeling Education for University Freshmen	274–282
Web-based Avatar Represented Lecture Viewer toward Interactive e-Lecture Performed by 3D Avatar	283–286
Students' grading control and visualisation in competence-based learning approach	287–296
Do Autonomously Motivated Students Benefit from Collaborative Learning Methods?	297–300
Flow Paths: A standalone tangible board system for creating educational games	301–304
Teaching Computing for non-IT students	305–309
Redefining Best Practices in Company Internships	310–313
Reconstructing students' subjective theories on self-directed learning - A qualitative research approach in Software Engineering Education	314–317
A Conversational Case Based Reasoning Approach to Help Teachers in Solving Professional Problems	318–323
Playful Learning in Academic Software Engineering Education	324–332
A Unified Approach for Assessing Casptone Design Projects and Student Outcomes In Computer Engineering Programs	333–339
Standardized Enriched Rubrics to support competency-assessment through the SCALA methodology and dashboard	340–347

Table of Contents

Title	Page range
Work in Progress - Automation of a Computer Networking Laboratory	348–353
Interaction skills in personal management of technicians	N/A
Development of a xAPI Application Profile for Self-Regulated Learning: Requirements for capturing SRL related data	358–365
The Effects of Listening Agent in Speech-Based On-line Test System	366–370
Cyber Security Education as a Tool for Trust-building in Cross-Border Public Protection and Disaster Relief Operations	371–378
Learning by Research and Development in Perspective of Peer-group Mentoring	379–383
Project based learning in business intelligence with intervention of companies	384–387
Learning Experiences within Authentic Demonstrations : Research Project Demonstrations at Viksu 2014 Camp	388–394
GridKa School - Teaching Information Technologies since 2003	395–402
The EOLES course - The first accredited full online undergraduate course in Electronics and Optics for Embedded Systems	403–410
Towards a Better Understanding of Learning Mechanisms in Information Systems Education	411–420
Motivation in Engineering Education: A framework supported by evaluation instruments and enhancement resources	421–430
Using a SPOC to flip the classroom	431–436
First-year dropout in ICT studies	437–445
Involving graduating engineers in applying a commercial brain-computer interface to motorized wheelchair driving	446–452
On Analyzing the Effectiveness of Just-in-Time-Teaching	453–461
Conceptual understanding of complex components and Nyquist-Shannon Sampling Theorem: a design based research in Engineering	462–470
Using social learning in network engineering curricula	471–478
A remotely accessible photovoltaic system as didactic laboratory for electrical engineering courses	479–485
Software Engineering Project Simulation in Student Entry Phase of Computer Scientists-to-be	486–493
An Open Access Minimum Automatic Task Generation Live Feedback System for Electrical Engineering	494–498
Teaching algorithms: visual language vs flowchart vs textual language	499–504
Design of flexible cost-efficient International Engineering Curricula at Public University of Navarre	505–510
Positive Experience of the Project Gamification in the Microprocessors and Microcontrollers Course	511–517
Teaching Software Engineering in Schools - On the right time to introduce Software Engineering Concepts	518–525
Using Group-Creativity Methods in Engineering Education	N/A
Assessing Students Approaches in the context of Telecommunications Services Provision	532–535
Low cost SCADA system for education	536–542
Computing Education in K-12 Schools: A Review of the Literature	543–551
E-Testing Question Development Technologies and Strategies	552–560
The Europe Code Week (codeEU) initiative: Shaping the skills of future engineers	561–566
Semester of Code: Piloting Virtual Placements for Informatics across Europe	567–576
Mobile devices, another teaching tool in the engineering classroom	577–581
Implementing gamification techniques into university study path – a case study	582–586
Pedagogy Sharing in the PROMIS Tempus Project	587–593
Development of an educational tool for Control Engineering	594–601
Inquiry-based learning perspective of Human Computer Interaction course	602–607
Online documentation approach for assisted system engineering and assessment in student projects	608–611
Application of experience achieved in realization of international project for the holistic teaching of undergraduate engineering students	612–614
Engineering professors' conceptions of assessment. An important variable for Engineering education	N/A
Building Excellence in Engineering Education in India	624–629
The Dependence Pedagogy Approach	N/A
Education in Bioengineering and Medical Informatics in the Western Balkan Region: Fostering New Study Programs	640–647
Task-based Programming Learning	648–653
A new challenge in the Electronics teaching/learning process for the Industrial Design Engineering Bachelor. An interactive educational tutorial	N/A
Enhancing the motivation and success of freshman students in interdisciplinary engineering degree programs	659–667
On Feedback Techniques for the Evaluation of Teaching Effectiveness	668–675
What Is The Role For Collegiate Design Competitions In A Multi-Discipline, Diverse World?	676–680
Teaching Digital System Design on a Unified Computer Engineering Learning Platform	681–688
Reengineering of Computer Science Curriculum According to Technology Changes and Market Needs	689–693
Successful Integration of Practical Cisco CCNA in the Computer Networks Design Course Course	694–703
Professionalization of computer science studies – project's results and evaluation	704–708
A New Model for Collaborative Learning of Programming Using Source Code Similarity Detection	709–715
"24 hours of innovation": a Trans-Pyreanean Challenge Initiative	716–721

Table of Contents

Title	Page range
Hardware-software synergy for ICT student motivation	722–729
On The Role of Challenging Math Problems in the Discrete Mathematics Courses	730–736
Platform for Teaching Communication Systems Based on Open-Source Hardware	737–741
Collaborative Learning from Mobile Crowd Sensing: a Case Study in Electromagnetic Monitoring	742–750
Work in Progress: Embedded Computer Engineering Learning Platform Capabilities	751–753
Work in Progress: Teaching EM Diffraction via Virtual Tools: “The WedgeTOOL”	N/A
REMOTE LABORATORY NETWORKS BEHAVIOR IN THE LIGHT OF THE SELF-ORGANIZATION PROCESSES	758–763
Educational Decision-Making About Curriculum Development, Environments and Economics of Education	764–767
Work in Progress: TwittLING project. Using Twitter in Engineering Education	768–770
A New Method of Assessing the Students using Video Assignments	771–773
An Investigation with European Science Teachers on how to Characterize Remote and Virtual Labs	774–781
Systematic Assessment of Student Outcomes in Mathematics For Engineering Students	782–788
Work in Progress: mobile technology for teaching in higher education	789–792
Dynamic Publishing and Availability Management of Virtual Machines in Virtual Organization	793–798
A Heterogeneous Supercomputer Model for High-Performance Parallel Computing Pedagogy	799–805
Randomness Impact in Digital Game-Based Learning	806–811
A Novel Design of Management Senior Project for Engineering Students	812–817
Online Tools for Making ICT More Attractive for Students to Prevent Dropout	818–822
Impact of students’ preferences on the design of online laboratories	823–826
A Survey on the Usage of Online Labs in Science Education: Challenges and Implications	827–835
Virtualizing testbed resources to enable remote experimentation in online telecommunications education	836–843
Work in Progress: Multi-disciplinary curriculum review of Engineering Education: UCL’s Integrated Engineering Programme.	844–846
Game Technologies in Teaching “Mathematical Modeling”	847–851
How Students and Teachers react to an AR free puzzle game: preliminary tests	852–855
Concept Maps and Linear Systems: Beyond Learning Object	856–864
Work in Progress: Approach to Modeling and Optimizing the Content of IT Education Programs	865–867
Problem-based Learning Environments in moodle: Implementation Approches	868–873
Planning and Designing Remote Experiment for School Curriculum	874–878
Teaching Automation and Control with App Inventor Applications	879–884
Visualizing the invisible - Foundation collapse mechanisms	885–888
The AppComposer Web Application for School Teachers: A Platform for Translating and Adapting Educational Web Applications	889–897
Aspects Relating to Didactics and the Problem of the Knowledge	898–907
Measuring Software Engineering Competencies	908–914
Just-in-Time-Teaching Experience in Software Design Pattern Course	915–919
A New Problem Based Blended Learning Approach in Software Engineering	920–925
FAST Learning: A New Didactic Method in Software Engineering	926–931
The Case for Teaching “Tool Science”. Taking Software Engineering and Software Engineering Education beyond the Confinements of Traditional Software	932–938
Discovering the Essence of Software Engineering - an Integrated Game-Based Approach based on the SEMAT Essence Specification	939–947
Using Mobile Crowd Sensing to Teach Technology and Entrepreneurship in High Schools: an Experience from Southern Italy	948–953
Learning in Higher Education by European Framework Projects. Laurea’s study module: “International innovation work of information systems”	954–960
Computer programming as an educational tool in the English classroom	961–966
Mixing and Blending MOOC Technologies with Face-to-Face Pedagogies	967–971
Towards learning resources rankings in MOOCs: A Pairwise based Reputation Mechanism	972–977
Towards a Learning Analytics Approach for Supporting discovery and reuse of OER. An approach based on Social Networks Analysis and Linked Open Data	978–988
Towards MOOCs scenarios based on Collaborative Learning Approaches	989–992
Requirements for educational games in MOOCs	993–997
Design and Evaluation of Competition-based Hacking Exercises	998–1007
CoALa – A Collaborative Analysis Lab for an identification of user parameters for adaptive e-learning systems	1008–1012
