Table of Contents

Cover Control Systems Engineer (CSE)	i
Notice from the Publisher	iii
This Reference Manual Covers All Subject Content for the PE/CSE Examination	iv
Plan Your Study Time	iv
Table of Contents	1
Introduction to This Study Guide	19
About the Author	19
People who have contributed to the previous editions of this manual	20
Tips on How to Use This Study Guide	21
Using Thumbnails to Navigate	22
Using Bookmarks to Navigate	23
Important File Attachments - Open by clicking on the paper clip!	24
How to Print this Manual	24
Welcome to Control Systems Engineering	25
Licensing as Professional Engineer / Control Systems Engineer (CSE).....	25
Why Become a Professional Engineer?.....	28
This is the third edition of this study manual.....	30
The new and expanded sections include:	30
Recommended Flow Chart of Study for the CSE	31
Overview of Recommended Flow Chart of Study for the CSE	32
Examination General Information	33
State Licensing Requirements.....	33
Eligibility	33
Exam schedule.....	33
Description of Examination	34
Exam content	34
I. Measurement.....	34
II. Signals, Transmission, and Networking.....	35
III. Final Control Elements	35
IV. Control Systems	36
V. Safety Systems	37
VI. Codes, Standards, Regulations	37
Exam Scoring	37
Reference Materials for the Exam	39
Recommended Books and Materials to Take to the Exam	39
Books and Materials for Testing	40
Books for Additional Study	40
Courses for Additional Study	41
ISA Control Systems Engineer (CSE) PE Review	41
Industrial Network Training	41
Control Systems Engineer (CSE) Supplement Course	42
Online Process Plant @ Learn Control Systems.com	42

Process Measurement Standards and Terminology	43
Overview of process measurement, control and calibration	43
Process Signal and Calibration Terminology	44
Definition of the Range of an Instrument	44
Definition of the Span of an Instrument	45
Definition of the use of Zero in Instrumentation	45
Live-Zero	45
Elevated-Zero	45
Suppressed-Zero	45
Illustrations of range and span terminology	46
Illustrations of measured variable, measured signal, range and span	47
Applications of Fluid Mechanics in Process Control	49
Relationship of pressure and flow	49
Applications of the formulas	52
Summary of fluid mechanics for process control	56
Temperature Measurement and Calibration	57
Temperature measurement devices and calibration	57
Thermocouple - worked examples (how to read the thermocouple tables)	59
RTD (Resistance Temperature Detector)	60
Installing RTDs and Thermocouples into a process stream	63
Typical RTD and thermocouple applications	64
Pressure Measurement and Calibration	65
Pressure measurement and head pressure	65
Applying pressure measurement and signals - worked examples	66
Differential pressure and meter calibration	66
Pressure change in a pipe for a given flow rate	67
Pressure change across the flow element for a given flow rate	67
Pressure calibration of transmitter	68
Level Measurement and Calibration	69
Applying level measurement and calibration - Worked examples	69
Level displacer (Buoyancy)	72
Bubbler level measurement	74
Density measurement	75
Interface level measurement	76
Radar and Ultrasonic level measurement	78
Time of flight technology	78
Ultrasonic level measurement	78
Radar (non-contact)	78
Guided Wave Radar (GWR)	79
Capacitance level measurement	79
Radiometric (gamma) level measurement	80
Level gauging system in a tank farm	80
Calculating the volume in tanks	81
Flow Measurement and Calibration	83
Applying flow measurement devices	83
Turndown ratio in a flow meter	83
ISA standard flow meter symbols	83
Flow meter applications chart	84

Pressure tapplings (Impulse Line Taps).....	84
Orifice tap dimensions and impulse line connections	85
Various Types of Flow Meters.....	88
Applying the Bernoulli principle for flow control.....	89
Types of Head Pressure based meters.....	90
Venturi meter.....	90
ISO 5167 Orifice Plate and Orifice plate.....	90
Dall tube.....	90
Pitot-Static tube	90
Multi-hole pressure probe.....	90
Cone meters.....	90
Annubar meters (also reference averaging pitot tubes)	91
Differential head meter calculations.....	91
Classic fluid mechanics model.....	91
“K” value flow coefficients.....	92
The beta ratio.....	95
Pipe Size Is Important - Remember!	96
Standard Flow Measurement Equations.....	97
Spink - Flow Measurement Equation	97
The basic Spink equation derived	98
The basic Spink equation for liquid.....	99
The basic Spink equation for gas and vapor	99
The basic Spink equation for steam.....	99
Applications of the Beta and Spink factors	100
Table 3 – The Spink Factor (S).....	101
ISO 5167 - Flow Measurement Equation	102
The expansibility factor.....	102
The discharge coefficient.....	103
The ISO 5167 equation explained	103
Solve for the Reynolds number ‘Re’	104
Solve for the coefficient ‘C’	104
Solve for mass flow rate:	105
Solve for volumetric flow rate	105
Equation Comparison Summary	106
Sizing orifice type devices for flow measurement - worked examples.....	106
Mass flow measurement and control	109
Applying mass flow measurement with an orifice - worked example.....	112
Turbine meter applications.....	113
Turbine flow meter - worked example	116
Weight Measurement and Calibration.....	119
Weight measurement devices and calibration	119
Load cells.....	119
Load cells for (flow, level, force) applications in process	120
Process Analyzers	121
Electrical conductivity and pH correction	121
How are pH and electrical conductivity measured?	121
Control of pH values in processes	121
Typical pH correction control scheme	122
Control of conductivity.....	123
Instrument specifications and operating parameters	123

Common Plant Analyzers	123
Boiling Point Analyzers.....	123
Vacuum Distillation Analyzer	123
Flash Point Analyzer.....	124
Cloud Point Analyzer.....	124
Freeze Point Analyzer	124
Pour Point Analyzer	124
Color Analyzer	124
Combustion and Analyzers.....	124
Combustion furnace and air-fuel ratio control.....	125
Air-Fuel ratio control utilizing CO and O ₂ concentrations	125
BMS - Burner Management Safety	125
OSHA Requirements	126
Carbon dioxide (CO ₂) reading	126
Examples of Process Analyzers	126
Select the appropriate analyzer and configuration	127
Typical Analyzer Piping and Control Schematic	128
Process Control Valves and Actuators.....	129
Process control valves.....	129
Considerations when sizing a control valve	130
Flow Coefficient Cv	130
Specific Gravity	130
Operating Conditions.....	130
ISA standard valve symbols.....	131
ISA standard pressure regulating valve symbols.....	131
Valve actuators.....	132
ISA standard actuator symbols	132
Limit switches on a valve - ISA standard symbol	133
Calculating the size of the actuator	133
Example actuator sizing	134
Split ranging control valves	135
Valve positioner applications	137
ISA standard valve positioner symbols	137
Summary of positioners.....	138
When should a positioner be used?	138
Electrical positioners.....	138
Control valve application comparison chart	139
Understanding flow with valve characteristics.....	140
What is the ΔP for valve sizing?	140
System piping ΔP pressure drops.....	140
Control valve ΔP pressure drop	141
Graph of the Inherent valve characteristics (off the shelf).....	142
Which valve characteristic trim to use?.....	142
Characteristic distortion in valves.....	143
Gain and Rangeability (turndown ratio in valves)	145
Proper control valve sizing	146
Oversized valves present problems	147
Experiment and understand Installed valve characteristics	149
Summary of control valve characteristics.....	150
Control Valve Sizing.....	151
The Valve Sizing Equations.....	151

The Basic equation for liquid flow	151
The basic equation for gas flow	151
The basic equation for steam flow	151
Sizing valves for liquid - worked example	153
Sizing valves for gas - worked example	155
Sizing valves for vapor and steam - worked example	158
Sizing valves for two phase flow - worked example	161
Two Phase Flow Worked Example	163
ΔP Valve Limitations - Very Important!	165
Flowing Quantity (the turndown ratio of a valve)	165
Flashing	166
Joule-Thomson Effect (J-T) – auto refrigeration in valves	166
Choked Flow	166
Maximum ΔP and Maximum Flow (q_{max}) in Valves Applications	167
Determining q_{max} (Maximum Flow Rate)	167
Determining ΔP_{max} (the Allowable Sizing Pressure Drop)	168
Cavitation in valves	169
Check for cavitation and choked flow in a control valves - worked examples	170
Fluid Velocities through Control Valves	174
Viscosity Correction for Sizing Valves	175
Pressure Relief Valves and Rupture Disks	177
Pressure Relief Valves (PRV) and Pressure Safety Valves (PSV)	177
Important Note: (Do Not Throttle Pressure Relief Valves)	177
EPA regulations	178
Regulation details	178
PRD bypass	179
Pilot operated safety valve	180
Bellow or balanced bellow and diaphragm	181
Weight loaded PRV operation	181
Venting Atmospheric and Low-Pressure Storage Tanks	183
API Standards for pressure relieving systems	186
CFR Standards for pressure relief required by federal law	187
API Standard 2000 – Venting atmospheric and low-pressure storage tanks	187
API Standard 2003 – Protection against ignitions from static, lightning, and stray currents	188
API Standard 2350 – Overfill protection for storage tanks in petroleum facilities	188
API Standard 2510 – Design and construction of LPG installations	189
NFPA 30 – Flammable and combustible liquids code	190
Important excerpts from NFPA 30 code:	190
Chapter 4: Tanks Storage	190
Chapter 5: Piping Systems	191
Chapter 6: Container and Portable Storage Tanks	191
Chapter 7: Operations	192
ASME VIII code for sizing relief valves and rupture disks	193
Introduction to ASME VIII	195
Overview Section VIII - Pressure Vessels	195
ASME VIII – Pressure relief requirements	195
ASME VIII - Pressure limits in sizing	196
Table 5 - ASME standard nozzle orifice data	196
ISA pressure relief valve and rupture disc symbols	197
Sizing equations for relief valves and rupture disks	198
ASME VIII code equations USCS units	198

A Note about sonic or choked flow	199
Variables for PRV and PSV sizing equations.....	199
Sizing rupture disks - worked examples.....	201
Sizing pressure relief valves - worked examples.....	203
Review of Feedback Control Fundamentals	209
Compare Open Loop Control to Closed Loop Control	209
Open Loop Example – A Mathematical Analysis.....	209
Closed Loop Example – A Mathematical Analysis.....	211
The Transfer Function for the Automobile	213
Review of Frequency Response Fundamentals	215
Electrical Application – A First Order System.....	215
Bode Plot of First Order System.....	216
Calculate the data for the Bode Plot.....	217
Creating a Bode Plot – First Order System using Frequency	220
Hydraulic Application – A First Order System	221
Process Control Theory and Controller Tuning.....	223
Degrees of Freedom in Process Control Systems.....	223
Controllers and control strategies (models-modes)	225
Process Loop Gain (Gp)	227
Process Signal Linearization	228
Signal Filtering in Process Control.....	230
Applying Signal Filters.....	230
Filter Time Constant and Sample Time	231
Example of Filter Time Selection	232
DCS/PLC Sample and Scan Time Consideration	233
Sampling time	233
Time per scan cycle.....	233
Tuning of Process Controllers	234
Closed Loop Tuning of the Controller	234
Example: Tune Using Ultimate Gain (continuous cycling)	235
Open Loop Tuning of the Controller	236
Example: Tuning using Process Reaction Curve (Step Response)	238
Advanced Tuning Methods for Controllers.....	239
The Integral Criteria Method	239
Lambda Tuning Concepts.....	239
Example Reactor Ratio Timing	242
IMC Tuning Method.....	243
PID Controller Models.....	244
Trial and Error Tuning Method	244
Dead Time and PID Control.....	244
PID Tuning Video - Parameters in Action.....	244
Process Characteristics from the transfer function	245
Poles, Zeros, and Dampening from the Transfer Function	245
Find the Poles from the Function	246
Find the Damping from the Function.....	246
Find the Time Constant.....	247
Find the Period.....	247
Find the Time Constant from the Period	247
Find Overshoot and Peak Value.....	247
Block Diagram Algebra.....	248

Example of Block Diagram Algebra Reduction	249
Nyquist Stability Criterion	250
Routh Stability Criterion.....	251
Check for Stability using Routh (Example)	254
Communications and Industrial Control Networks	257
Overview of Corporate and Plant Networks	257
Open System Interconnect (OSI) and TCP/IP network layer model.....	259
7 Layers of networking in the OSI model.....	259
Physical (Layer 1).....	259
Data Link (Layer 2).....	259
Network (Layer 3).....	259
Transport (Layer 4).....	259
Session (Layer 5).....	260
Presentation (Layer 6).....	260
Application (Layer 7)	260
Cisco Network Certification – IIOT (Industrial Internet of Things) for IT and OT.....	260
The typical network model	261
The Network Essentials.....	263
Overview of Industrial Networks	264
The most popular industrial networks and their applications are below.....	264
HART Networks	265
Traditional HART Network.....	265
A Wired HART Network.....	266
A Wireless HART Network.....	266
PROFIBUS and AS-i Networks	267
Reasons for choosing PROFIBUS	267
PROFIBUS DP	267
PROFIBUS PA	268
PROFINET.....	268
AS-i	268
PROFIBUS Fieldbus Message Specification (FMS).....	269
PROFIBUS.....	269
PROFIsafe	269
PROFIdrive.....	269
Use of the OSI Networking Layers.....	269
PROFIBUS/AS-i/PROFINET Certifications:	269
FOUNDATION Fieldbus	270
Reasons for choosing FOUNDATION Fieldbus	270
H2 or HSE (High Speed Ethernet)	270
FOUNDATION H1.....	270
Typical FOUNDATION Segments	271
Use of the OSI Networking Layers.....	271
Rockwell and ODVA (CIP) Networks	272
ControlNet.....	272
DeviceNet	273
EtherNet/IP.....	274
CompoNet	274
DH485, DH+, RIO	274
Modbus Networks.....	275
Traditional Modbus Networks.....	275
Communication and Devices.....	275

Protocols.....	275
EtherCAT	276
SERCOS.....	276
Summary - Automation and Process Control Networks.....	277
Plant Facility Monitoring and Control System (FMCS)	277
BACnet	278
LonWorks	278
Typical Building Automation Network.....	278
Networked intelligent and smart devices.....	279
PID control in intelligent networked devices.....	279
PROFIBUS Control Blocks	280
The Rosemount 333 Tri-Loop to split multiple variable signals.....	280
The Application of Digital Logic in Control Systems	281
Overview of Digital Logic.....	281
Digital Logic Gate Symbols	281
Digital Logic Gate Truth Tables	282
ISA Binary Logic	283
Relay Ladder Logic.....	284
Standard RLL Symbols	285
Sealing Circuits	285
Control System Architectures	286
DCS Plant Wide Control System Architecture - Networked.....	286
PLC Control System Architecture	288
PLC (Programmable Logic Controller) vs PAC (Process Automation Controller)	288
Controller Application Function Comparison Chart.....	289
SCADA Control System Architecture.....	289
PLC Programming Languages.....	290
PLC Programming (LD) ladder diagram or (RLL) relay ladder logic	291
PLC Programming (ST) structured text.....	291
PLC Programming (FBD) functional block diagram	292
PLC Programming (SFC) sequential function chart	292
Writing a Program and Developing a HMI for a Small Systems.....	293
RSLogix 5000, ControlLogix PIDE (PID Enhanced) Function Block Diagram.....	294
Motor Control and Logic Functions	297
Plant Electrical System	297
Motor Control Center (MCC).....	297
Typical MCC Design	298
Typical Motor Controller.....	298
How to Control a Motor.....	299
Starter Auxiliary Contacts	299
Overload and Fault.....	299
The basic NEMA stop-start station	300
Typical Motor Control Schematic	300
NEMA and IEC Terminal Designations	301
NEMA Standards Publication ICS 19-2002 (R2007).....	301
Relays and Contacts	301
Coil Lettering and Relay Socket Numbers (NEMA and IEC Numbers).....	301
Standard Symbols	303
Standard Symbols (Continued)	304
NEMA and IEC Comparisons	305

Stop-Start Station Control Circuit Schematic.....	306
Starter Control Circuit Schematic	306
Relay Ladder Logic (RLL) and Function Blocks.....	307
RLL and Their Boolean Functions.....	307
Putting Ladder Logic into the PLC.....	308
Example of a Safety System in a PLC.....	309
Safety Logic in the PLC.....	310
Alarming on Sensor Input Failure.....	310
The PLC Logic for Valve and Alarm Monitoring	311
Schematic to Programming Languages	311
The Application of Analog Circuits in Control Systems	313
Overview of Analog Signals.....	313
Typical Analog Loop Wiring Diagram	313
Simplified signal transmitters that maintain constant flow rate for measurement variable.....	314
Constant Current Loops and Ohm's Law	315
Current Loop Fundamentals	315
The 4-20 mA Current Loop.....	315
Using Current to Transmit Transducer Data.....	316
Current Loop Components.....	316
Current Loop System.....	316
Designing a Current Loop System	317
Choosing a Power Supply	317
Adding More Transducers and Instruments	318
Devices in Series.....	319
A typical Current Loop Repeater.....	320
Active and Passive Current Loops.....	321
Sinking and Sourcing Devices.....	322
What is the difference between PNP and NPN?	322
PNP Sensor verses NPN Sensor	323
Overview of Motion Controller Applications	325
Motion Control Systems.....	325
The basic architecture of a motion control system contains:	325
Stepper Motor	325
Closed-Loop Stepper Motor	325
Stepper motor advantages	326
Linear motion control.....	326
Series vs. parallel connection	326
Servo motor systems	327
Advanced motion controls	327
Position plus velocity system	327
Electro-hydraulic Servo System	328
Position and pressure/force control	328
Position transducers.....	328
Fieldbus interfaces	329
Applications of servo systems.....	329
Soft Starter Applications	329
How does a soft starter work?.....	329
Benefits of choosing a soft starter	330
Variable Frequency Drive.....	330
How does a variable frequency drive work?	330

Conversion from AC to DC to AC PWM.....	331
Volts to Hertz Relationship	334
Important Note about Low Frequency in VFDs	335
VFDs put Noise into the Electrical System	335
PID Control with VFD or DC Drive	336
Closed loop control with drive electronics.....	336
Block diagram of PID control with feedback operation available on some VFDs	336
Drive with built-in PID tension control of web or winding reel operation.....	336
Electrical Systems and Power Quality	337
Filtering Power and Harmonics.....	337
Harmonic Neutralizing Transformers.....	337
Filtering of a Harmonics in Power Systems.....	338
Passive Filter	338
Active Filter	339
Proper Grounding Procedures	341
Emergency Standby Systems	343
Article 700 – Emergency Systems	343
Article 701 – Legally Required Standby Systems	343
Article 702 – Optional Standby Systems	343
UPS (uninterruptible power supply)	343
UPS and Battery Bank Sizing	344
Load Profile Calculation.....	347
Battery Sizing Calculation	348
Worked Example – Sizing the Battery Bank	349
Backup Generator	351
BMCS Implementation (Building Monitoring and Controls System)	352
Hydraulics and Pneumatics	353
Fluid Power Systems	353
Hydraulic Systems.....	353
Pneumatic Systems.....	355
Typical Pneumatic System (this type may be found in a manufacturing or chemical plant)	355
Mechanical Flow Diagram of a Large Compressor.....	355
Instrumentation Air Header (Fluid Distribution Header or Manifold)	355
Pneumatic Schematic of Valve Controller.....	356
I/P Current to Pneumatic Positioner	356
Instrument Air Cost - Engineering Economics	357
Assumption	357
Peak air demand	357
Vendor data	357
Include Total Demand.....	358
Instrument Air Piping and Cost.....	358
Pipe sizing is just like sizing electrical lines	359
Caution Using Charts and Graphs	359
Interconnects and headers	359
The Target Objectives	359
Eliminate the pressure drop	360
Air Velocity.....	360
Crunching the Numbers	361
Recover Wasted Heat to Save Money	362

Fluid Power Schematic Symbols.....	363
Overview of Conveying Technologies	371
Some common types of conveying systems are as follows:	371
Heavy Duty Roller Conveyors.....	371
Flexible Conveyors	371
Vertical Conveyors and Spiral Conveyors	372
Spiral Conveyors	372
Vertical conveyor with forks	372
Vibrating Conveyors.....	372
Pneumatic and Vacuum Conveyors	373
Pneumatic Tube Conveyor Systems.....	373
Large Complex Pneumatic Conveying Systems.....	374
Typical Plant Pneumatic Conveying System.....	374
HMI for Pneumatic Conveying System.....	374
Dilute Phase Systems	375
Dense Phase Systems	375
Conveying Phase Diagram	376
Pressure Distance Relationships	377
Vacuum Conveying	377
A typical vacuum product transportation system.....	378
Vacuum conveying systems and HMI display	378
Vacuum conveying system HMI display	378
Blower operating cost of pneumatic systems.....	379
Screw conveying systems.....	379
Screw conveyor instruments.....	380
Mass or bulk flow measurement	380
Radiometric measurement for mass flow rate	380
Load cell measurement for mass flow rate.....	380
Mass flow control of conveying system.....	381
Radiometric measurement for mass flow rate	381
Load Cell (Strain Gauge) measurement for mass flow rate	381
Typical scale systems used on manufacturing lines and in plants	382
Chemical Process Technology and Equipment.....	383
Process Technologies	383
Separation Processes	384
A Typical Horizontal 3-Phase Separator.....	384
Industrial Distillation	384
A Typical Industrial Distillation Process	385
A Typical Distillation Unit	385
Industrial Furnaces (Fired Heaters).....	386
Industrial Furnaces.....	386
Fired Heater Control Scheme.....	387
Expansion Tanks and Heat Transfer Fluid	387
Vapor Pressure, Boiling and Cavitation in Equipment	389
Vaporization in Equipment	389
Control Valve Applications.....	389
Pumping Applications	389
Video of Vaporization and Cavitation Phenomenon	390
Heat Exchangers.....	391
Flow Arrangement	391
Shell and Tube Heat exchanger	392

Dynamic scraped surface heat exchanger.....	392
Phase-change heat exchangers	392
Reboiler as seen on a distillation column.....	392
Heat Exchanger BTU Calculation and Control.....	393
Example of how to control the heat exchanger:	393
Condenser (heat transfer).....	394
Evaporation Processes	395
What is evaporation?.....	395
What is latent heat?.....	395
What is the boiling point?.....	395
Various Types of Evaporators and Their Working Principles.....	395
Vertical Falling Film Evaporator	395
Horizontal Film Evaporator.....	396
Low Temperature Vacuum Evaporator.....	397
Using the Psychrometric Chart	399
Cooling Towers.....	401
Cooling Tower Calculations.....	401
Cooling tower water loss and make-up	402
Cooling tower control scheme and operating cost	404
Typical pH correction system.....	405
Chemical Reactors and Control.....	406
What is a Reactor?	406
Types of Reactors.....	406
Basic Control Scheme for a Reactor	407
CSTR (Constant Stirred Tank Reactor).....	407
Hydrocracking Reactor Controls	407
Chemical Scrubbers.....	408
Wet exhaust gas cleaning	408
Wet gas scrubber	409
Dry scrubbing	410
Scrubber waste products	410
Bacteria spread	410
Dehydration Processes.....	411
Absorption	411
Joule-Thompson effect.....	413
Crystallization Technology	414
Static Crystallization.....	414
Falling Film Crystallization	416
Suspension Crystallization	416
Process flow diagram suspension crystallization.....	417
Freeze Concentration.....	417
Overview of a small crystallization plant to control	418
Flare and Vent Disposal Systems	418
Types of flares.....	418
Flare Control Systems	419
Quality Control Standards for Production of Products	419
ISA Standards for Documentation.....	421
ISA Instrument or Function Symbol	421
ISA Line Type Symbols.....	422
Standard Line Types	422
ISA Identification Letters.....	423

ISA P&ID Identification (Controllers and Readouts).....	424
ISA P&ID Identification (Transmitters, Switches and Alarms).....	425
ISA P&ID Identification (Compute, Relay and Elements).....	426
Piping and Equipment Symbols.....	427
Standard P&ID (Piping and Instrumentation Diagram).....	428
P&ID Sample 1 (Functions).....	428
P&ID Sample 2 (Alarms).....	429
P&ID Sample 3 (Separator).....	429
EM (Equipment Modules) as in the ISA-88 Standard.....	430
Cross Limiting Control of Furnace.....	430
Simplified P&ID Sample 1.....	431
Simplified P&ID Sample 2.....	431
ISA Standard PFD (Piping Flow Diagram) or MFD (Mechanical Flow Diagram).....	432
PFD (Piping Flow Diagram) Sample 1.....	432
BFD (Block Flow Diagram).....	434
BFD Sample 1.....	434
BFD Sample 2.....	434
ISA Standard Loop Diagram.....	435
Instrument Location and Elevation Plan Drawing.....	437
Instrument Index Sheet.....	438
DCS or PLC I/O List (A List of Inputs and Outputs with Tags and Calibration Data).....	439
ISA Standard (HMI) Graphical Display Symbols and Designations.....	440
HMI Sample 1.....	440
HMI Sample 2.....	441
NFPA 79 Colors for Graphical Displays (Industrial Machinery).....	441
Battery Limits of the Plant.....	442
Overview of Safety Instrumented Systems.....	443
Overview of process safety and shutdown.....	443
SIS (Safety Instrumented Systems).....	443
Complying with IEC 61511 / ISA-84.....	443
Other codes related to SIS systems.....	444
ISA and OSHA letter defining the requirements of the implementation of SIS systems.....	444
Initiating Events of Safety Instrumented Systems.....	445
Initiating Event.....	445
Examples.....	445
External Events.....	445
Equipment Failures.....	445
Human Failures.....	445
The difference between BPCS and SIS systems.....	446
IEC 61508 mandatory and guidelines.....	447
SIF and SIL.....	448
Risk analysis and protection layers.....	448
Designing a SIS System.....	449
SIL (Safety Integrity Level) – Unit for Functional Safety.....	449
SFF – Safe Failure Fraction.....	450
Probability of Failures on Demand (PFD).....	451
Probability of Failures per Hour (PFH).....	451
SIL Capability and Safety System.....	452
SIF (Safety Instrumented Function).....	453
A typical P&ID of the (SIF) Instrumentation.....	453
Voting or (Polling of the System).....	454

A typical voting system and its instrumentation for the above P&ID.....	454
Types of Voting (X out of X).....	454
Voting Probabilities.....	455
The SIS calculations.....	455
Quantification of Reliability in almost absolute terms.....	455
Failure Models – The Bathtub Curve.....	456
Reliability Laws.....	457
Improving the reliability of a measurement system.....	457
Safety Integrity Level (SIL) and Availability.....	458
Sample of SIL Evaluation.....	458
Acronyms.....	458
Metrics used in the reliability engineering field involving SIS.....	459
2. MTTR = Mean Time to Repair.....	459
3. MTBF – Mean Time Between Failures.....	459
4. Availability A(t) and Unavailability U(t).....	460
5. Probability of Failure on Demand (PFDavg) and Periodic Test and Inspection.....	460
SIS Calculations - worked example.....	462
Calculating PFD (Probability of Failure on Demand).....	463
Calculating MTTF (Mean Time to Failure) Based on Failure Rates.....	463
Calculating MTBF based on failures.....	463
SIS and SIL – worked examples.....	464
Example 1: Pump Failure Rate (FR).....	464
Example 2: MTBF over 10 years.....	464
Example 3: PFD and Test Interval.....	465
Recommended SIS Study Material.....	466
Excerpts from Process Safebook 1 – Rockwell Automation.....	466
Overview of NEC / NFPA and Other Codes.....	469
CFR (Federal Government) Public Safety Standards of the United States.....	469
List of NFPA codes (be familiar with these codes).....	472
NFPA 70 – NEC (National Electrical Code).....	472
Voltage Drop Calculations.....	473
Substitute specific resistance (k) for resistance (R) of wire.....	473
Wire and cable sizing formulas for voltage drop.....	473
Voltage drop calculations – worked examples.....	474
NEC Article 500 Explosion Proof Installations.....	476
Class I Hazardous Location NEC Article 501.....	476
Class I Location Definition.....	476
Class I Division Definitions.....	477
Class I Group Definitions.....	477
Class I Temperature Definition.....	478
Class II Hazardous Location NEC Article 502.....	478
Class II Location Definition.....	478
Class II Division Definitions.....	478
Class II Group Definitions.....	479
Class II Temperature Class.....	479
Class III Hazardous Location NEC Article 503.....	479
Class III Location Definition.....	479
Class III Division Definitions.....	479
Class III Group Definitions.....	480
Use of Zone Classifications.....	480
Classification Comparison (Zone/Division) for a Class I Location.....	480

Group Comparison (Zone/ Division) for a Class I Location.....	481
Protection Methods Comparison Class	481
Designation of NEC/CEC Classification.....	482
Hazardous Location Classification.....	482
Summary the various hazardous (classified) locations.....	483
Hazardous Location Wiring Methods	484
Purged and pressurized systems	485
Intrinsically safe systems	485
Zener diode barrier (configurations).....	485
Conventional passive IS Zener barriers	485
Active (powered) IS isolation barriers	485
NEC Article 409 and UL 508A	486
What is NEC 409 and UL 508A?	486
SCCR (Short-circuit current rating) of industrial control panels	486
Components in the power circuit	486
SCCR calculations – worked examples.....	487
NEC Articles for Remote Control and Signaling	488
Article Categories.....	488
Cabling Installations and Applications (Types and Ratings).....	489
Cables Selection for Installation per NEC Code	489
Article 725 - Class 1, Class 2, Class 3, Remote-control Circuits.....	491
Power sources.....	492
Class 1 methods and materials	492
Class 2 and Class 3 methods and materials	492
Article 800 - Communications Circuits.....	493
Examples of Article 725, 727 and 800 in instrumentation and controls	494
NEMA Electrical Enclosures Types and Uses.....	496
Non-hazardous location NEMA enclosure types	496
Table 10 – Indoor Nonhazardous Locations	497
Table 11 - Outdoor Nonhazardous Locations	498
Table 12 - Hazardous Locations	499
Temperature Rise Calculation	499
NFPA 70E Standard for Electrical Safety	500
What is NFPA 70E?.....	500
What is Arc Flash.....	500
Approach / Protection Boundaries	501
Arc Flash Analysis.....	501
Required Arc Flash Warning Label	501
NFPA 77 Static Electricity	502
1.2 Purpose	502
8.1 General overview	502
8.3.1 Charge generation	503
G.1 Grounding diagrams	504
NFPA 780 Lightning Protection (formerly NFPA 78)	505
NFPA 780 and NFPA 70 (NEC)	505
Strike-termination devices	505
Connecting conductors to electrodes	505
Routing down conductors	506
Conductor and electrode connection	506
Earth-grounding electrodes	506
Summary of lightning protection components.....	506
Air terminal height	506

Conductor bends	506
Conductor size and material	507
Transient Protection from Lightning Strikes	507
NFPA 79 Industrial Machinery.....	509
Conductor sizing.....	509
Conductor colors.....	509
Pushbutton functions for color	509
Colors for Machine Indicator Lights and Icons Table 10.3.2.....	509
NFPA 496 Purged and Pressurized Systems.....	510
Overview of the NFPA 496 articles	510
Factors to consider (NFPA 496, Sec. 5-3).....	510
Location of the control room (NFPA 496, Secs. 5-3.1(c) and 5-3.2)	510
Positive pressure air systems (NFPA 496, Sec. 5-4.1)	511
Type X equipment (NFPA 496, Sec. 5-4.4)	511
Type Y equipment (NFPA 496, Sec. 5-4.5)	511
Type Z equipment (NFPA 496, Sec. 5-4.5)	511
Examples of Purged and Pressurized Systems.....	512
Basic design of purged enclosures.....	512
Basic design of purged buildings.....	513
40 CFR and EPA - LDAR	514
The Clean Air Act (CAA).....	514
What the Law Requires.....	514
Putting It All Together.....	515
Define the Scope of the Plant	515
Define the Control Systems Architecture	516
Some Typical Large DCS Architectures.....	517
More on DCS Cabinets and I/O Distribution	518
Distributing the Power and Control	519
Routing the Cable Trays	520
Choose the Wiring Method.....	521
Field Distribution Systems.....	522
Class I, Division 2 Installations	523
Class I, Division 1 Installations	523
Modular Wiring Distribution Systems.....	524
Instrument Air Supply and Pneumatic Tubing	525
Instrument Air Consumption	525
Compressor Types.....	526
Piping System and Manifold	526
Air Pipe Header	526
Pneumatic Tubing.....	526
Air Distribution Manifold (Header)	527
Routing of Pneumatic Tubing.....	527
Heat Tracing Systems	528
Electric Heat Tracing	528
Steam Heat Tracing.....	529
Free Heat Tracing Software	530
Determine Scope of Design.....	530
Electrical Scope	531
Instrumentation and Mechanical Scope.....	531
Design of Electrical Plans	532
Sample of a possible design for the control network and communications in plant	533

Sample of a possible plan for routing of cable tray and conduit.....	534
Sample of a possible layout for a MCC building with medium voltage switchgear installed	535
Sample of a possible one-line electrical diagram for the low voltage in the MCC building	536
Sample of a possible ladder diagram for the control of an Allen Bradley frequency drive.....	537
Sample of a possible electrical field wiring diagram for the frequency drive	538
Sample of a possible electrical field wiring diagram routing the analog instruments to DCS.....	539
Locations of Instruments and Piping Design.....	541
Finding the location of an instrument in a plant	547
Useful Equations for Pumping, Piping and Sizing Valves	549
Find pipe diameter with velocity of flow known	549
Find flow velocity with pipe diameter known.....	549
Find pipe diameter with temperature and pressure correction.....	549
Find flow velocity with temperature and pressure correction	549
Find the Reynolds Number for the flow.....	549
Calculate the Piping Head Losses to Size a Control Valve.....	550
Find the pump motor size (break horsepower)	551
Calculating the Hydraulic Horsepower of pumps	551
Calculating the Brake Horsepower of pumps	552
Correct Pump Head and Flow Rate for Fluid Viscosity	553
Piping Absolute Roughness Values	556
Applications of Pumping Systems	557
Pump Basics	557
Static Head	557
Applying Variable Frequency Drives to Pumps to Realize Savings	558
Pumps with Variable Frequency Drives (VFD).....	558
When Can You Save with a VFD?	559
Sizing a Pump Head with Specific Gravity of the Pumped Fluid	560
How a Piping System Works.....	561
Calculating Volume in Tanks	565
Cylindrical Tanks Upright	565
Cylindrical Tanks on Side.....	565
Spherical Tanks.....	566
Bullet Tanks.....	566
Examination Sample Questions	567
Sample Questions	567
Answers to Examination Sample Questions	574
Explanations and Proofs of Examination Sample Questions	575
Preparing this Guide for the Exam	587
An Avery tab template is included with this guide	587
Suggested tabbing the guide.....	587
Guide to Using the Fisher Control Valve Handbook	589
Important Sections to Review	589
Important Pages to Tab.....	589
Valve and materials Selection.....	589
Actuator Sizing Methods.....	590
Valve Sizing Methods	590
Electrical Apparatus	590

Engineering Data.....	590
Piping System Applications.....	590
Conversions and Equivalents.....	591
Appendix and Data Tables.....	593
Table A1 - Thermocouple Table (Type J).....	594
Table A2 - Thermocouple Table (Type K).....	596
Table A3 - Thermocouple Table (Type E).....	599
Table A4 - Thermocouple Table (Type T).....	601
Table A5 - Platinum 100 Ohm RTD Table in ohms.....	602
