#### Workshop Papers

|                                                                                                                                                                         |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Dynamic Provisioning and Execution of HPC Workflows Using Python .....                                                                                                  | 1  |
| <i>Chris Harris, Patrick O'Leary, Michael Grauer, Aashish Chaudhary,<br/>Chris Kotfila, and Robert O'Bara</i>                                                           |    |
| Migrating Legacy Fortran to Python While Retaining Fortran-Level<br>Performance through Transpilation and Type Hints .....                                              | 9  |
| <i>Mateusz Bysiek, Aleksandr Drozd, and Satoshi Matsuoka</i>                                                                                                            |    |
| PALLADIO: A Parallel Framework for Robust Variable Selection<br>in High-Dimensional Data .....                                                                          | 19 |
| <i>Matteo Barbieri, Samuele Fiorini, Federico Tomasi, and Annalisa Barla</i>                                                                                            |    |
| High-Performance Python-C++ Bindings with PyPy and Cling .....                                                                                                          | 27 |
| <i>Wim T.L.P. Lavrijsen and Aditi Dutta</i>                                                                                                                             |    |
| A New Architecture for Optimization Modeling Frameworks .....                                                                                                           | 36 |
| <i>Matt Wytock, Steven Diamond, Felix Heide, and Stephen Boyd</i>                                                                                                       |    |
| Performance of MPI Codes Written in Python with NumPy and mpi4py .....                                                                                                  | 45 |
| <i>Ross Smith</i>                                                                                                                                                       |    |
| Boosting Python Performance on Intel Processors: A Case Study<br>of Optimizing Music Recognition .....                                                                  | 52 |
| <i>Yuanzhe Li and Loren Schwiebert</i>                                                                                                                                  |    |
| ePython: An Implementation of Python for the Many-Core Epiphany<br>Co-processor .....                                                                                   | 59 |
| <i>Nick Brown</i>                                                                                                                                                       |    |
| Devito: Towards a Generic Finite Difference DSL Using Symbolic Python .....                                                                                             | 67 |
| <i>Michael Lange, Navjot Kukreja, Mathias Louboutin, Fabio Luporini,<br/>Felippe Vieira, Vincenzo Pandolfo, Paulius Velesko, Paulius Kazakas,<br/>and Gerard Gorman</i> |    |

|                                                                                              |    |
|----------------------------------------------------------------------------------------------|----|
| Mrs: High Performance MapReduce for Iterative and Asynchronous Algorithms<br>in Python ..... | 76 |
| <i>Jeffrey Lund, Chace Ashcraft, Andrew McNabb, and Kevin Seppi</i>                          |    |
| <b>Author Index</b> .....                                                                    | 86 |
