

# **33rd Air Infiltration and Ventilation Centre Conference (AIVC 2012) and 2nd TightVent Conference 2012**

Optimising Ventilative Cooling and  
Airtightness for [Nearly] Zero-Energy  
Buildings, IAQ and Comfort

Copenhagen, Denmark  
10 – 11 October 2012

ISBN: 978-1-5108-3761-4

**Joint Conference  
33<sup>rd</sup> AIVC Conference and 2<sup>nd</sup> TightVent Conference**

**Optimising Ventilative Cooling and Airtightness for  
[Nearly] Zero-Energy Buildings, IAQ and Comfort**

**List of available papers (status September 25, 2012)**

- Health and indoor air quality challenges (Marie-Eve Heroux, WHO) page 1
- Long term monitoring of residential heat recovery ventilation with ground heat exchange (Bart Cremers, Zehnder Group Nederland) page 5
- Human preference and acceptance of increased air velocity to offset warm sensation at increased room temperatures (Giulio Cattarin) page 15
- Intelligent energy consumption in low energy housing (Anders Hof Christensen, Danish Technological Institute) page 25
- Comparison of displacement ventilation and mixing ventilation systems with regard to ventilation effectiveness in offices (Michele De Carli) page 31
- Natural ventilation strategy potential analysis in an existing school building (Laura Lion, EURAC research) page 43
- Ventilated courtyard as a passive cooling strategy in the hot desert climate (Mohamed Hssan Hassan, Aswan University) page 53
- Transfer of ultrafine particles and air in multi-storey buildings (Amalie Gunner, Aalborg University) page 61
- Air Leakage of US Homes: Regression analysis and Improvements from Retrofit (Max Sherman, Lawrence Berkeley National Laboratory) page 69
- Lessons learned on ventilation systems from the IAQ calculations on tight energy performant buildings (Xavier Boulanger, Aldes) page 79
- Influence of improvement of air-tightness on energy retrofit of social housing, a Case Study in a Mediterranean Climate (Jesica Fernandez-Agüera, University of Sevilla) page 87
- Airtightness of office and educational buildings in Sweden – measurements and analyses (Ake Blomsterberg, WSP Sweden) page 99

- An Investigation of the Relationship between Dwelling Permeability, Operational Adventitious Air Leakage, and Winter Space Heating Demand (Benjamin Jones, University College London) page 109
- Strategies for controlling thermal comfort in a Danish low energy building: system configuration and results from 2 years of measurements (Peter Foldbjerg, Velux) page 111
- Ventilated courtyard as a passive cooling strategy in the hot desert climate (Mohamed Hssan Hassan, Aswan University) page 121
- Towards the aeraulic characterization of roof windows ? (Bruno Peupartier, Armines) page 129
- Air turbulence intensity influence on the thermal comfort evaluation for different ventilation strategies (Cristiana Croitoru, University of Bucharest) page 139
- Reducing energy consumption in a existing shopping centre using natural ventilation (Jannick Karsten Roth, WindowMaster) page 149
- Façade-Integrated Ventilation Systems in Nordic Climate (Matthias Haase, NTNU) page 159
- Swedish experience with air tightness testing: overall scheme, test protocol, and practical (Johnny Andersson, Ramböll Sweden) page 169
- Natural ventilation and passive cooling is not any more a privileged of experts (Flourentzos Flourentzou, Estia) page 177
- Proposal for an updating French regulation concerning airtightness measuring equipments' calibration (Florent Boithias, CETE de Lyon) page 185
- Overflow elements : Impacts on energy efficiency, indoor air quality and sound attenuation (Gabriel Rojas Kopeinig, University of Innsbruck) page 191
- Numerical prediction of the air exchange in the museum premises equipped with natural ventilation systems (Andrzej Baranowski, Silesian University of Technology) page 201
- Construction and Set-up of a Full-Scale Experimental House for ventilation studies (Manfred Plagmann, Branz) page 207
- Update of the spanish regulation regarding ventilation and infiltration: analysis, comparisons and repercussions (José Manuel Salmeron Lissen, University of Sevilla) page 215
- RANS and LES models comparison for a cross-shaped jet flow with application in personalized ventilation (Florin Bode, University of Bucharest) page 225
- Simplified hourly method to calculate summer temperatures in dwellings (Lone Hedegaard Mortensen, Aalborg University) page 237
- Addressing summer comfort in low-energy housings using the air vector: a numerical and experimental study (Axel Cablé, University of La Rochelle) page 247
- French policy for Shelter-in-place : Airtightness measurements on indoor rooms (Gaëlle Guyot, CETE de Lyon) page 257
- Optimal sizing rules for natural, simple exhaust and mechanical residential ventilation systems (Jelle Laverge, University of Ghent) page 267

- Checking “fabric first” really works: in-construction tests using thermography (Tim Taylor, Cardiff Metropolitan University) page 275
- Energy Retrofit of the Existing Housing Stock in England (Hasim Altan, University of Sheffield) page 285
- Lessons learnt from the regulatory quality management scheme in France (Sarah Juricic, CETE de Lyon) page 295
- Build Large Buildings right or suffer a life sentence of Energy, Comfort & IAQ Problems (Colin Genge, Retrotec) page 303
- Postulate for Airtightness Limits in Large Buildings (Stefanie Rolfsmeier, BlowerDoor) page 305
- Best practice window installation in Sweden (Stefan Tenbuss, Tremco illbruck) page 315
- Demand specifying variables and current ventilation rate requirements with respect to the future use of VOC sensing for DCV control (Jakub Kolarik, Technical University of Denmark) page 321
- New developments in VOC sensing for DCV (Simone Herberger, AppliedSensor) page 331
- Residential ventilation system performance: outcomes of a field study in the Netherlands (Atze Boerstra, BBA Indoor Environmental Consultancy) page 339
- Performances of ventilation systems: on site measurements related to energy efficiency, comfort and health (Samuel Caillou, BBRI) page 351
- Airtightness and ventilation of new Estonian apartments constructed 2001-2010 (Targo Kalamees, Tallinn University of Technology) page 353
- Thermal comfort analyses in classrooms (David Venus, AEE INTEC) page 361
- Experimental study of diffuse ceiling ventilation in a classroom (Christian Anker Hviid, Technical University of Denmark) page 371
- Uncertainties in airflow network modelling to support natural ventilation early stage design (Annamaria Belleri, EURAC research) page 381
- Improvement of summer comfort by passive cooling with increased ventilation and night cooling (Tommaso Pellegrini, University of Padova) page 393
- Hybrid ventilation – the ventilation concept in the future school buildings? (Jannick Karsten Roth, WindowMaster) page 407
- Exhaust ventilation under 5 ventilation standards : a performance assessment (Jelle Laverge, University of Ghent) page 419
- Design of HVAC systems for deprived community houses in Yorkshire and the Humber region in the UK (Hasim Altan, University of Sheffield) page 429
- Assessment of performance of innovative ventilation systems: use and limit of multicriteria analysis (Marc Jardinier, air-h & Laure Mouradian, CETIAT) page 443
- Heat recovery efficiency: measurement and calculation methods (Samuel Caillou, BBRI) page 453
- Integration of solar chimney with direct evaporative cooler as a passive ventilation technique under Egyptian climate (Amr Sayed Hassan) page 463

- Hybrid ventilation and cooling technics for the new Nicosia Townhall  
(Flourentzos Flourentzou, Estia) page 465
- The influence of the selective ventilation in the thermal performance of modern naturally-ventilated houses in Goiânia – Brazil (Leônidas Albano da Silva Junior, University of Catalunya) page 475
- Air leakage characteristics of dwellings in high-rise residential buildings in Korea  
(Yun Jeong Choe, Inha University) page 485
- A survey of airtightness and ventilation rates in post 1994 NZ homes (Stephen McNeil, Branz) page 493
- Numerical evaluation of airtightness measurement protocols (Adeline Bailly, CETE de Lyon) page 503
- Blower door tests of a group of identical flats in a new student accommodation in the Arctic  
(Carsten Rode, Technical University of Denmark) page 511
- Assessment of the airtightness and air exchange in polish dwellings – measurement experiences and problems met (Joanna Ferdy-Grygierek, Silesian University of Technology) page 521
- A numerical study on the role of leakage distribution and internal leakages under unsteady wind conditions (Dimitrios Kraniotis, Norwegian University of Life Sciences) page 527
- The discharge coefficient of a centre-pivot roof window (Ahsan Iqbal, Danish Building Research Institute) pages 417, 539
- Effect of Measurement Location of Air Air-tightness Performance on Apartment Units in Korea  
(Shin Cheol Woong, KICT) pages 265, 547
- Experimental evaluation for the dynamic insulation applied to window frame  
(Shinsuke Kato, University of Tokyo) pages 235, 553
- Applicability of air supply type airflow window system applied to double-pane window page 561
