## K1: Keynote

Communicating with the New Machine: Human Insight at Machine Scale

## OS1: Oral Session 1

Dealing with Situations

### ***A Framework for Cognitive Situation Control.....1***

Gabriel Jakobson (CyberGem Consulting)

### ***A Model Based on Rough Sets for Situation Comprehension and Projection.....8***

Giuseppe D'Aniello (University of Salerno, Italy); Angelo Gaeta (Università di Salerno, Italy);  
Vincenzo Loia (University of Salerno, Italy); Francesco Orciuoli (Università di Salerno, Italy)

### ***Situation-Based Ontologies for a Computational Framework for Identity Focusing on Crime Scenes.....15***

Marguerite McDaniel (North Carolina A&T State University, USA); Emma Sloan (Brown University, USA); Siobahn Day, James Mayes, Kaushik Roy, William Nick and Albert Esterline (North Carolina A&T State University, USA)

### ***A Cognitively Motivated Algorithm for Rapid Response in Emergency Situations.....22***

Robert Kozma (U of Memphis, USA)

### ***Electroencephalography (EEG) Classification of Cognitive Tasks Based on Task Engagement Index.....26***

Joseph Nuamah (North Carolina Agricultural and Technical State University, USA); Younho Seong (North Carolina A&T State University, USA); Sun Yi (North Carolina Agricultural and Technical State University, USA)

## P1: Panel 1

SA and Big Data

Data analytic methods provide the potential to significantly speed and improve the quality of analysis of large volumes of data. This panel will explore the advent of big data and its use to improve situation awareness via information gathering and prioritization, integration and analysis, and projection of future trends. Technical issues associated with the development of effective big data applications will be explored by the panel, including its affect on understanding certainty or confidence in the underlying data or big data products, validation of big data algorithms, support for situation awareness in working with big data systems, and integration of big data with human decision making. This panel is applicable to work in multiple domains including military and commercial systems and will include a consideration of both technical and cognitive engineering issues.

## OS2: Oral Session 2

Dealing with Complex Environments

### ***Maritime Smuggling Detection and Mitigation Using Risk-Aware Hybrid Robotic Sensor Networks.....32***

Nicolas Primeau (University of Ottawa, Canada); Rami Abielmona and Rafael Falcon (Larus Technologies Corporation, Canada); Emil M. Petriu (University of Ottawa, Canada)

### ***Soft-Data-Driven Resource Management for Concurrent Maritime Security Operations.....39***

Alex Plachkov (University of Ottawa, Canada); Rami Abielmona, Moufid Harb and Rafael Falcon (Larus Technologies Corporation, Canada); Diana Inkpen, Voicu Groza and Emil M. Petriu (University of Ottawa, Canada)

### ***Image Retrieval for Visual Understanding in Dynamic and Sensor Rich Environments.....46***

Noah Lesch, John Pecarina, Andrew Compton and Douglas Hodson (Air Force Institute of Technology, USA)

### **Overcoming Challenges to Air Force Satellite Ground Control Automation.....53**

Michael Bentley (Air Force Institute of Technology & US Air Force, USA); Alan Lin and Douglas Hodson (Air Force Institute of Technology, USA)

## **K2: Keynote**

### Minsky K-line Memory: Integration of Multi-Strategy Reasoning and Learning

Theories and architectures that consider human/machine processing grounded on multi-strategy reasoning and learning investigate an essential set of questions in "machine intelligence" (biological and/or "silicon").

"You don't understand anything until you learn it more than one way." — Marvin Minsky There are opportunities in the theories of Minsky and others (e.g., Newell, Schank, LeCun, Mitchell and many others). I will consider how Minsky's K-Line Theory of Memory highlights valuable open questions that have impact on our future work. As a simple starting point for my talk consider the following excerpt from Minsky's K-Line paper:

When you "get an idea," or "solve a problem," or have a "memorable experience," you create what we shall call a K-line. This K-line gets connected to those "mental agencies" that were actively involved in the memorable mental event. When that K-line is later "activated," it reactivates some of those mental agencies, creating a "partial mental state" resembling the original.

Minsky's Society of Mind (SOM) theories mixed with contributions from Minsky colleagues provide insight for future research.

## **P1: Poster Session 1**

### ***Towards a Connected Bicycle to Communicate with Vehicles and Infrastructure: Multimodal Alerting Interface with Networked Short-Range Transmissions (MAIN-ST).....160***

Michael P Jenkins, Daniel J Duggan, III and Alessandro Negri (Charles River Analytics, USA)

### ***Hailing a Ride with a Rescue Helicopter: A Case Study.....163***

Odd Erik Gundersen (Norwegian University of Science and Technology, Norway); Christoffer Pram (NTNU, Norway); Fredrik Øvergård (Råd AS, Norway)

### ***The System Dynamics Architecture of UTASiMo: a Simulation-Based Task Analysis Tool to Predict Human Error Probability.....166***

Anastasia Angelopoulou (University of Central Florida & Institute for Simulation and Training, USA); Konstantinos Mykoniatis (University of Central Florida, USA)

### ***Automation Bias with a Conversational Interface: User Confirmation of misparsed information...169***

Erin Zaroukian (United States Army Research Laboratory, USA); Jonathan Bakdash (US Army Research Lab, USA); Alun Preece (Crime and Security Research Institute, United Kingdom); Will Webberley (Cardiff University, United Kingdom)

### ***A Vision for Human-Machine Mutual Understanding, Trust Establishment, and Collaboration...172***

Carlos R. B. Azevedo, Klaus Raizer and Ricardo Souza (Ericsson Research, Brazil)

### ***Human Interactive Machine Learning for Trust in Teams of Autonomous Robots.....175***

Robert Gutzwiller and John Reeder (Space and Naval Warfare Systems Center Pacific, USA)

### ***Information Transfer Within Human Robot Teams: Multimodal Attention Management in Human-Robot Interaction.....178***

Bruce Mortimer (Engineering Acoustics, Inc., USA); Linda Elliott (US Army Research Laboratory & Human Research and Engineering Directorate, USA)

### ***Cybersecurity Issues in Robotics.....133***

George Clark, Jr., Mike Doran and Todd R Andel (University of South Alabama, USA)

## P2: Poster Session 2

***The Effect of Automation and Workspace Design on Humans' Ability to Recognize Patterns in Data While Fusing Information.....138***

Kellie Turner (Air Force Research Laboratory, USA); Michael E. Miller (Air Force Institute of Technology, USA)

***Understanding Audio Communication Delay in Distributed Team Interaction: Impact on Trust, Shared Understanding, and Workload.....181***

Andrea Krausman (US Army Research Laboratory, USA)

***Cognitive Support During High-Consequence Episodes of Care in Cardiovascular Surgery.....184***

Heather Conboy (University of Massachusetts); Stefan Christov (Quinnipiac University, USA); George Avrunin (University of Massachusetts, USA); Lori Clarke (University of Massachusetts, Amherst, USA); Leon Osterweil (University of Massachusetts, USA); Julian Goldman (Mass. General Hospital and CIMIT, USA); Steven Yule (Brigham and Women's Hospital, USA); Marco Zenati (Harvard Medical School & Brigham & Women's Hospital, USA)

***Scenarios Using Situation Awareness in a Simulation Environment for Eliciting Insider Threat Behavior.....187***

Lauren Reinerman-Jones (University of Central Florida & IEMS, USA); Gerald Matthews and Ryan Wohleber (University of Central Florida, USA); Eric Ortiz (SoarTech, USA)

***Designing a Pragmatic Graphical Grammar.....143***

Leonard Eusebi (Charles River Analytics, USA); Sean Guarino (Charles River Analytics Inc., USA)

***Testing the Usability of a Decision Support System for Increasing Environmental Awareness...148***

Jennifer Danczyk, Paula Jacobs and Michael P Jenkins (Charles River Analytics, USA); Michael Farry (Charles River Analytics, Inc., USA); Olivia Montgomery (Tufts University, USA); David Young (Charles River Analytics, USA)

***A Systematic Approach to Developing near Real-Time Performance Predictions Based on Physiological Measures.....153***

Amanda Kraft (Lockheed Martin Advanced Technology Lab, USA); Jon Russo (Lockheed Martin Advanced Technology Laboratories, USA); Michael Krein (Lockheed Martin Advanced Technology Lab, USA); William Casebeer (Advanced Technology Laboratories & Lockheed Martin, USA); Matthias Ziegler (Lockheed Martin Advanced Technology Lab, USA)

## OS3: Oral Session 3

### Decision Making & Support

***Self-Adaptive Dynamic Decision Making Processes.....60***

Kenneth P. Baclawski (Northeastern University, USA); Adel Ghoneimy, Dieter Gawlick and Eric Chan (Oracle, USA); Kenny Gross (Oracle Physical Sciences Research Center, USA); Zhen Liu (Oracle, USA)

***Decision-Making Involving Low Probability High Consequence Events Under Risk and Uncertainty.....66***

Roman Ilin (AFRL, USA); Galina L. Rogova (University at Buffalo, USA)

***Online Learning for an Individualized Lane-Change Situation Recognition System Applied to Driving Assistance.....71***

Arezoo Sarkheyli-Hägele (University of Duisburg-Essen, Germany); Dirk Söffker (University Duisburg-Essen, Germany)

***Expert-based Probabilistic Modeling of Workflows in Context of Surgical Interventions.....77***

Patrick Philipp (Karlsruhe Institute of Technology, Germany); Yvonne Fischer and Jürgen Beyerer (Fraunhofer IOSB, Germany); Jürgen Beyerer (Karlsruhe Institute of Technology (KIT), Germany)

## Dinner Speaker

The Creation of Siri

Siri was a product of DAPRA's Personalized Assistant that Learns (PAL) project. In particular, it originated in SRI International's effort under PAL, called the Cognitive Assistant that Learns and Organizes (CALO). In this talk, David Gunning (who was the DARPA Program Manager for PAL) will describe Siri's history - how the technology was created, formed into a startup, and acquired by Apple. He will summarize the history of the PAL program, highlighting the key events relevant to the creation of Siri, and summarize the sequence of events, following the PAL program, to create the Siri venture and have it acquired by Apple.

## K3: Keynote

### Trusting Increasingly Autonomous Cars

Increasingly autonomous cars are transforming what it means to drive, and this transformation is emblematic of changes in other domains: finance, military operations, healthcare, manufacturing, and the home. Driving is a microcosm of autonomy. As in other domains, technology does not substitute for people, but transforms their roles. Increasingly these roles are not as a supervisor of automation, but as a partner in a network of interacting agents. This role suggests a need to re-think the concepts of trust and situation awareness. Most generally, this means considering people's world view and their assumptions regarding the persistence of the natural and moral order that guides the evolution of trust and situation awareness. More specifically, rather than focusing on how automation reliability influences reliance, it may be more productive to focus on how automation collegiality influences cooperation. To promote appropriate trust we need to move beyond creating transparent automation that displays its purpose, process, performance to creating responsive and responsible automation that has controls for aligning its goals, adapting its strategies, and adjusting its behavior. The dimensions of autonomy most relevant for these considerations might not be levels of automation, but depth and breath of span of the control and time constant of interaction. This talk will link these theoretical considerations to research directions and design principles.

## OS4: Oral Session 4

### Human-Machine Interaction

#### ***Rightward Attentional Bias in Windshield Displays: Implication Towards External Human Machine Interfaces for Self-driving Cars.....84***

Qiang Liu (VWGoA, USA); Birte Emmermann, Oscar Suen, Bryan Grant, Jacob Hercules and Erik Glaser (ERL VWGoA, USA); Brian Lathrop (Volkswagen Group of America, Inc., USA)

#### ***Cyber-Physical-Human System for Connected Car-Based e-Tourism: Approach and Case Study Scenario.....91***

Nikolay Shilov and Alexander Smirnov (SPIIRAS, Russia); Oleg Gusikhin (Ford, USA)

#### ***Head Gesture Recognition via Dynamic Time Warping and Threshold Optimization.....98***

Ubeyde Mavuş and Volkan Sezer (Istanbul Technical University, Turkey)

#### ***A Supervisory Control Loop with Prognostics for Human-in-the-Loop Decision Support and Control Applications.....105***

Kenneth P. Baclawski (Northeastern University, USA); Adel Ghoneimy, Dieter Gawlick and Eric Chan (Oracle, USA); Kenny Gross (Oracle Physical Sciences Research Center, USA); Zhen Liu (Oracle, USA)

## P2: Panel

### SA and Robotics

The panel on SA and Robotics is concerned with situation awareness and management issues involved in human-robot interaction. Those systems can range in complexity from a human operator controlling a single robot or a swarm of robots through a traditional interface, to teams of humans and robots freely interacting using natural means such as voice and gestures. Issues include techniques to maintain appropriate human SA given existing sensors and cognitive limitations, algorithms to allocate decision making between human oversight and robotic autonomy, and frameworks to manage collaboration in order to leverage respective strengths of humans and robots. The panel will start with an invited presentation, followed by brief rejoinders by the panel members, then an open discussion involving audience participants.

## OS5: Interaction with Autonomous Systems

#### ***Effective Variety? for Whom (Or What)?.....112***

Stephen Dorton (Sonalyts, Inc., USA); Micah Thirey (Sonalyts, USA)

***Evaluating Path Planning in Human-Robot Teams Quantifying Path Agreement and Mental Model Congruency.....119***

Brandon Perelman (US Army Research Laboratory, USA); Shane Mueller (Michigan Technological University, USA); Kristin Schaefer (US Army Research Laboratory, USA)

***Using Context and Robot-Human Communication to Resolve Unexpected Situational Conflicts.....126***

Wayne Zachary and Taylor J Carpenter (CHI Systems, USA)
