SPIE

Volume 10183

Proceedings of SPIE 0277-786X, V. 10183

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Sensing XVIII*, edited by Augustus W. Fountain III, Jason A. Guicheteau, Proceedings of SPIE Vol. 10183 (SPIE, Bellingham, WA, 2017) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

SESSION 1 ADVANCES IN CHEMICAL SENSING I

10183 02	Methodology for using active infrared spectroscopy in standoff detection of trace explosives [10183-1]
10183 03	Real-time, wide-area hyperspectral imaging sensors for standoff detection of explosives and chemical warfare agents [10183-2]
10183 04	High-speed mid-infrared hyperspectral imaging using quantum cascade lasers [10183-3]
10183 05	Advanced LWIR hyperspectral sensor for on-the-move proximal detection of liquid/solid contaminants on surfaces [10183-4]
10183 06	Measurement of infrared refractive indices of organic and organophosphorous compounds for optical modeling [10183-5]
10183 07	Improved detection of chemical substances from colorimetric sensor data using probabilistic machine learning [10183-6]

SESSION 2 ADVANCES IN CHEMICAL SENSING II

10183 08	Raman imaging using fixed bandpass filter [10183-7]
10183 09	Ultraviolet Raman scattering from V-agents [10183-8]
10183 0B	Photo-vibrational sensing of trace chemicals and explosives by long-distance differential laser Doppler vibrometer [10183-10]
10183 0C	Detecting unknown chemical clouds at distance with multispectral imagery [10183-20]

SESSION 3 EXPLOSIVE DETECTION

10183 0E	Performance comparison of single and dual-excitation-wavelength resonance-Raman explosives detectors [10183-12]
----------	--

SESSION 4 RADIOLOGICAL, NUCLEAR, AND BIOLOGICAL

10183 0I **Thermal bioaerosol cloud tracking with Bayesian classification** [10183-17]

10183 0K **Development of a large area microstructure photomultiplier assembly (LAMP)** [10183-19]
