PROCEEDINGS OF SPIE

Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Sensing XX

Jason A. Guicheteau
Chris R. Howle
Editors

15–17 April 2019
Baltimore, Maryland, United States

Sponsored and Published by
SPIE

Volume 11010

Proceedings of SPIE 0277-786X, V. 11010

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Sensing XX*, edited by Jason A. Guicheteau, Chris R. Howle, Proceedings of SPIE Vol. 11010 (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is $18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/19/$18.00.

Printed in the United States of America by Curran Associates, Inc., under license from SPIE.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIEDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

STANDOFF SENSING OF CBRNE HAZARDS I

11010 02 CBRNE sensing at 20 years: a retrospection and prospects for the future (Keynote Paper) [11010-1]

11010 03 Standoff hyperspectral imaging of CWAs and explosives using eyesafe QCL arrays [11010-2]

11010 04 Infrared backscatter imaging spectroscopy for standoff detection of trace explosives [11010-3]

11010 05 Real-time, reconfigurable, handheld molecular chemical imaging sensing for standoff detection of threats [11010-4]

11010 06 Experimental considerations for the proximate standoff detection of highly scattering hazardous materials using infrared techniques [11010-5]

11010 07 Dissemination monitoring by LWIR hyperspectral imaging [11010-6]

STANDOFF SENSING OF CBRNE HAZARDS II

11010 08 Wide-area mapping and identification system for detection of chemical contamination on surfaces [11010-7]

11010 09 Recent development of a UV Raman microscope explosive detection system for near trace detection [11010-9]

PHOTONIC INTEGRATED CIRCUIT AND PLASMONIC SENSORS

11010 0B Monolithically integrated silicon photonic chip sensor for near-infrared trace-gas spectroscopy [11010-11]

11010 0D Photo-induced enhanced Raman spectroscopy (PIERS): sensing atomic defects, explosives and biomolecules [11010-13]

11010 0F Approaching single molecule sensing: predictive sweat sensor design for ultra-low limits of detection [11010-15]

EXPLOSIVE SENSING

11010 0G Predicting the persistence of explosives materials [11010-16]

11010 0H Explosive detection and identification using a wide-area, hyperspectral Raman imaging sensor [11010-17]

11010 0I Characteristics of trace explosives particles in fingerprints for optical detection [11010-18]

ADVANCES IN CBE SIGNATURE MODELLING AND SENSOR ALGORITHMS I

11010 0K Synthetic models for infrared reflectance signatures of micro-particle traces on surfaces [11010-20]

ADVANCES IN CBE SIGNATURE MODELLING AND SENSOR ALGORITHMS II

11010 0L A new, hand-held, 1- to 5-m standoff analyzer for real-time detection of trace chemical, biological, and explosive substances on surfaces [11010-8]

11010 0M Obtaining the complex optical constants *n* and *k* via quantitative absorption measurements in KBr pellets [11010-21]

11010 0O Accurate optical constants for liquids in the near-infrared: improved methods for obtaining the *n* and *k* constants from 1 to 4 **µ**m [11010-23]

RADIOLOGICAL AND NUCLEAR SENSING

11010 0R Hyperspectral vegetation identification at a legacy underground nuclear explosion test site [11010-26]

11010 0S Fixed-angle reflectance from uranium compounds and U-bearing minerals: experimental challenges to determine the optical constants *n* and *k* [11010-27]

REMOTE AND DISTRIBUTED SENSING OF CBRNE HAZARDS

11010 0T Development of technology for low-power gas sensing: IARPA's MAEGLIN program [11010-28]

11010 0U Remote vapor detection and classification using hyperspectral images [11010-29]

11010 0V From the warehouse to the field: new applications of existing chemical warfare agent detectors without hardware modification [11010-30]

11010 0X A new modality for the detection of chemical vapors using middle infrared femtosecond pulse propagation effects [11010-32]

11010 0Z Detecting atmospheric DHO with a spectroscopic THz sensor [11010-35]

ADVANCES IN CHEMICAL HAZARDS SENSING

11010 12 **µChemLab: twenty years of developing CBRNE detection systems with low false alarm rates** [11010-38]

11010 13 Passive LWIR hyperspectral imaging of surfaces contaminated by CWA droplets [11010-39]

11010 14 Quantum cascade laser-based trace detection of gases in the deep-infrared region using phase fluctuation optical heterodyne spectroscopy [11010-40]

11010 15 Fiber-lasers for coherent Raman detection of toxic chemical hazards [11010-41]

POSTER SESSION

11010 17 Examination of stochastic and ordered methods to select optical filters for discrimination between chemical vibrational absorption bands [11010-43]

11010 18 Infrared reflectance characterization of ammonium nitrate residue on roughened aluminum for potential bioinspired stand-off sensor [11010-44]

11010 19 Angle-polished fibers as a robust coupling tool for photonics [11010-45]

11010 1A Packaging of optofluidic microbubble resonator sensors [11010-46]

11010 1C Low SWaP chemical sensing via a fabric-based spectrometer [11010-48]

11010 1D Detecting radiation in a standoff geometry with mid-IR laser breakdown [11010-49]

11010 1E Remote detection of radioactive material using optically induced air breakdown ionization [11010-50]
