

PROCEEDINGS OF SPIE

# ***Artificial Intelligence and Machine Learning for Multi-Domain Operations Applications***

**Tien Pham**  
*Editor*

**15–17 April 2019**  
**Baltimore, Maryland, United States**

*Sponsored and Published by*  
SPIE

**Volume 11006**

Proceedings of SPIE 0277-786X, V. 11006

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Artificial Intelligence and Machine Learning for Multi-Domain Operations Applications*, edited by Tien Pham, Proceedings of SPIE Vol. 11006 (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

ISSN: 0277-786X  
ISSN: 1996-756X (electronic)

ISBN: 9781510626775  
ISBN: 9781510626782 (electronic)

---

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

---

## AI/ML MULTI-DOMAIN OPERATIONS (MDO)

---

11006 02	<b>Operationalizing artificial intelligence for multi-domain operations: a first look (Invited Paper)</b> [11006-1]
11006 04	<b>Dynamic data driven analytics for multi-domain environments</b> [11006-4]
11006 05	<b>Theoretical development of multi-domain command and control</b> [11006-5]
11006 06	<b>Federated machine learning for multi-domain operations at the tactical edge (Invited Paper)</b> [11006-73]

---

## CONTEXT-VOI/TRUST

---

11006 07	<b>Representing and reasoning over military context information in complex multi domain battlespaces using artificial intelligence and machine learning</b> [11006-6]
11006 08	<b>Dependable machine intelligence at the tactical edge</b> [11006-7]
11006 09	<b>Vol for complex AI based solutions in coalition environments</b> [11006-8]

---

## ENABLING CAPABILITIES FOR AI/ML

---

11006 0B	<b>Design and implementation of the U.S. Army Artificial Intelligence Innovation Institute (Invited Paper)</b> [11006-10]
11006 0D	<b>Automated information foraging for sensemaking</b> [11006-12]
11006 0E	<b>Data column prediction: experiment in automated column tagging using machine learning</b> [11006-13]
11006 0F	<b>Reducing the cost of visual DL datasets</b> [11006-14]
11006 0G	<b>A conceptual architecture for contractual data sharing in a decentralised environment</b> [11006-15]

---

#### LEARNING IN COMPLEX ENVIRONMENTS

---

- 11006 0H **An analysis on data curation using mobile robots for learning tasks in complex environments** [11006-16]
- 11006 0I **How to make a machine learn continuously: a tutorial of the Bayesian approach** [11006-17]
- 11006 0J **Towards a learning-algorithm agnostic generative policy model for coalitions** [11006-18]
- 11006 0K **Comprehensive cooperative deep deterministic policy gradients for multi-agent systems in unstable environment** [11006-19]

---

#### HUMAN INFORMATION INTERACTION: ADVANCED CONCEPTS

---

- 11006 0L **Uncertainty-aware situational understanding** [11006-20]
- 11006 0M **Agent based simulation of decision making with uncertainty** [11006-21]
- 11006 0N **Application of data science within the Army intelligence warfighting function: problem summary and key findings** [11006-22]
- 11006 0O **Computational tools to support analysis and decision making** [11006-23]
- 11006 0P **Managing training data from untrusted partners using self-generating policies** [11006-24]

---

#### HUMAN AGENT TEAMING I

---

- 11006 0R **Partnering with technology: the importance of human machine teaming in future MDC2 systems** [11006-25]
- 11006 0S **Grounding natural language commands to StarCraft II game states for narration-guided reinforcement learning** [11006-26]
- 11006 0T **Improving motion sickness severity classification through multi-modal data fusion** [11006-27]
- 11006 0U **Investigating immersive collective intelligence** [11006-28]
- 11006 0V **Intelligent squad weapon: challenges to displaying and interacting with artificial intelligence in small arms weapon systems** [11006-29]

---

## HUMAN AGENT TEAMING II

---

- 11006 0W **Classification of military occupational specialty codes for agent learning in human-agent teams** [11006-31]
- 11006 0X **Achieving useful AI explanations in a high-tempo complex environment** [11006-32]
- 11006 0Y **A framework for enhancing human-agent teamwork through adaptive individualized technologies** [11006-33]
- 11006 0Z **Effect of cooperative team size on coordination in adaptive multi-agent systems** [11006-34]
- 11006 10 **Developing the sensitivity of LIME for better machine learning explanation** [11006-55]

---

## NOVEL AI/ML ALGORITHMS

---

- 11006 11 **Intelligence augmentation for urban warfare operation planning using deep reinforcement learning** [11006-35]
- 11006 12 **Super-convergence: very fast training of neural networks using large learning rates** [11006-36]
- 11006 13 **An efficient approximate algorithm for achieving  $(k - \omega)$  barrier coverage in camera wireless sensor networks** [11006-37]
- 11006 14 **Algorithmically identifying strategies in multi-agent game-theoretic environments** [11006-38]
- 11006 15 **A rapid convergent genetic algorithm for NP-hard problems** [11006-39]
- 11006 16 **Identifying maritime vessels at multiple levels of descriptions using deep features** [11006-40]
- 11006 17 **Super resolution-assisted deep aerial vehicle detection** [11006-41]
- 11006 18 **Using convolutional neural network autoencoders to understand unlabeled data** [11006-42]
- 11006 19 **Bayesian learning of random signal distributions in complex environments** [11006-70]

---

## ADVERSARIAL LEARNING

---

- 11006 1C **Defending against adversarial attacks in deep neural networks** [11006-45]
- 11006 1D **Model poisoning attacks against distributed machine learning systems** [11006-46]
- 11006 1E **Steps toward a principled approach to automating cyber responses** [11006-47]

## AI/ML APPLICATIONS

---

- 11006 1F     **DAIS-ITA scenario** [11006-3]
- 11006 1G     **Towards building actionable indicators of compromise based on a collaboration model**  
[11006-48]
- 11006 1H     **Radar emitter and activity identification using deep clustering methods** [11006-49]
- 11006 1I     **Approaches to address the data skew problem in federated learning** [11006-50]
- 11006 1J     **Experience and lessons learned from the Army RCO Blind Signal Classification Competition**  
[11006-52]

## POSTER SESSION

---

- 11006 1K     **Properties of federated averaging on highly distributed data** [11006-51]
- 11006 1L     **Beyond validation accuracy: incorporating out-of-distribution checks, explainability, and adversarial attacks into classifier design** [11006-53]
- 11006 1M     **Image quality and super resolution effects on object recognition using deep neural networks**  
[11006-54]
- 11006 1O     **Security engineering with machine learning for adversarial resiliency in cyber physical systems**  
[11006-59]
- 11006 1P     **On the machine learning for minimizing the negative influence in mobile cyber physical systems** [11006-60]
- 11006 1Q     **Deep adversarial attack on target detection systems** [11006-61]
- 11006 1R     **How to practically deploy deep neural networks to distributed network environments for scene perception** [11006-62]
- 11006 1S     **Machine learning using template matching applied to object tracking in video data** [11006-63]
- 11006 1T     **Overview of machine learning (ML) based perception algorithms for unstructured and degraded visual environments** [11006-64]
- 11006 1U     **Reducing bathymetric-lidar algorithm uncertainty with genetic programming and the evolutionary multi-objective algorithm design engine** [11006-65]
- 11006 1W     **Understanding of multi-domain battle challenges: AI/ML and the day/night thermal variability of targets** [11006-67]
- 11006 1X     **Machine learning based spectral interpretation in chemical detection** [11006-68]

11006 1Y **Radio frequency classification toolbox for drone detection** [11006-69]

11006 20 **Contingent attention management in multitasked environments** [11006-72]
