

PROCEEDINGS OF SPIE

Autonomous Air and Ground Sensing Systems for Agricultural Optimization and Phenotyping VI

**J. Alex Thomasson
Alfonso F. Torres-Rua**
Editors

**12–16 April 2021
Online Only, United States**

Sponsored and Published by
SPIE

Volume 11747

Proceedings of SPIE 0277-786X, V. 11747

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Autonomous Air and Ground Sensing Systems for Agricultural Optimization and Phenotyping VI*, edited by J. Alex Thomasson, Alfonso F. Torres-Rua, Proc. of SPIE 11747, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

UAV REMOTE SENSING FOR PHENOTYPING IN CROPS

- 11747 03 Investigate the potential of UAS-based thermal infrared imagery for maize leaf area index estimation [11747-1]
- 11747 04 Individual maize extraction from UAS imagery-based point clouds by 3D deep learning [11747-2]
- 11747 06 Predicting vineyard canopy coverage using drone pictures [11747-4]

THE PAST AND FUTURE OF PRACTICE REMOTE SENSING IN AGRICULTURE

- 11747 0A Lessons learned towards the immediate delivery of massive aerial imagery to farmers and crop consultants [11747-8]

MAXIMIZING ACCURACY IN UAV REMOTE-SENSING DATA

- 11747 0D Automated calibration pipeline for agricultural sUAS based remote sensing [11747-11]
- 11747 0E A collaborative operation system of autonomous unmanned aerial vehicles for field phenotyping in farm fields [11747-12]

GROUND-BASED AND ROBOTIC SYSTEMS IN AGRICULTURAL SENSING AND PHENOTYPING

- 11747 0I Scientific timely actionable robotic data operating system (STARDOS): architecture and progress [11747-16]

UAV REMOTE SENSING FOR MEASURING EVAPOTRANSPIRATION AND MOISTURE FACTORS IN CROPS

- 11747 0J A UAS-based RF testbed for water utilization in agroecosystems (Keynote Paper) [11747-17]
- 11747 0K Development of high performance computing tools for estimation of high-resolution surface energy balance products using sUAS information [11747-18]

- 11747 OL **Toward accurate estimating of crop leaf stomatal conductance combining thermal IR imaging, weather variables, and machine learning [11747-19]**
- 11747 ON **Evapotranspiration partitioning assessment using a machine-learning-based leaf area index and the two-source energy balance model with sUAV information [11747-21]**
