SPIE

Volume 11749

Proceedings of SPIE 0277-786X, V. 11749

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Sensing XXII*, edited by Jason A. Guicheteau, Chris R. Howle, Proc. of SPIE 11749, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

REMOTE AND DISTRIBUTED SENSING OF CBRNE HAZARDS

- 11749 02 Overview study on the characterization of zirconia as a function of calcination temperature (Invited Paper) [11749-1]
- 11749 07 Broadband photoacoustic spectroscopy using quantum cascade laser arrays for compositional analysis of airborne aerosols [11749-6]

EXPLOSIVE SENSING

- 11749 08 Multi-sensor threat detection for screening people and their carried bags [11749-7]

BIOLOGICAL HAZARD SENSING

- 11749 0B Routes to enabling Raman detection of in-theatre biological contaminants over extended range: spatial heterodyne spectroscopy, time-resolved Raman measurements, and the march towards the deep-UV (Invited Paper) [11749-10]
- 11749 0C Sensing of bacterial spores with 2D-IR spectroscopy [11749-11]
- 11749 0D A compact fiber-laser-based system for detection of biological agents via coherent Raman spectroscopy [11749-12]
- 11749 0G Development of army relevant wearable Photonic Integrated Circuit (PIC) biosensors [11749-15]

STAND-OFF SENSING OF CHEMICAL HAZARDS

- 11749 0I Recent development of a new handheld UV Raman sensor for standoff detection [11749-28]
- 11749 0J Mobile cart-based detection of infrared backscatter from hazardous substances at proximal distances [11749-29]
- 11749 0L Detection of chemical threats on surfaces using a human color vision inspired sensing method [11749-31]

INTELLIGENT SYSTEMS FOR CBRNE DETECTION

- 11749 0M **CBRNE sensors: intelligent systems** [11749-17]
- 11749 0O **Predicting instrument detection capability of dispersed samples while moving** [11749-19]

ADVANCES IN CBE SIGNATURE ANALYSIS AND SENSOR ALGORITHMS

- 11749 0P **Challenges to detection: humidity as a spur to chemical agent change** [11749-20]
- 11749 0Q **Real-time analysis of hyperspectral data in MATLAB: theoretical limits of anomaly detection utilizing higher order statistics through simulation** [11749-21]
- 11749 0R **Experimental and modeling investigation of binary liquid mixtures** [11749-22]
- 11749 0S **Combining spectroscopic ellipsometry with transmission spectroscopy to derive accurate optical constants for organic materials** [11749-24]
- 11749 0T **Measuring accurate optical constants of uranium minerals for use in optical modeling of infrared spectra** [11749-26]
- 11749 0U **Random forest and long short-term memory based machine learning models for classification of ion mobility spectrometry spectra** [11749-27]

POSTER SESSION

- 11749 0W **Inverse analysis of diffuse reflectance for surface-distributed particles using absorbance basis functions** [11749-25]
