12th GAMM-IMACS International Symposium on Scientific Computing, Computer Arithmetic and Validated Numerics

(SCAN 2006)

Duisburg, Germany
26-29 September 2006

IEEE

IEEE Catalog Number: CFP0699B-PRT
ISBN: 978-1-4244-3141-0

TABLE OF CONTENTS

Applications of Interval Algorithms in Engineering 1
Eberhard P. Hofer, Andreas Rauh

Operator Dependant Compensated Algorithms 13
Philippe Langlois, Nicolas Louvet

Validated Computation for Infinite Dimensional Eigenvalue Problems 24
Kaori Nagatou

Interval Tools for ODEs and DAEs 35
Nedialko S. Nedialkov

Computer-assisted Proofs 47
Arnold Neumaier

On the Solution to Numerical Problems Using Stochastic Arithmetic 53
Rene Alt, Jean-Luc Lamotte, Svetoslav Markov

Toward Validating a Simplified Muscle Activation Model in SMARTMOBILE 61
Ekaterina Auer, Martin Tandl, Daniel Strobach, Andres Kecskemethy

GRKLib: a Guaranteed Runge Kutta Library 69
Olivier Bouissou, Matthieu Martel

Hardware Implementation of Continued Logarithm Arithmetic 78
Tomas Brabec

Rigorous Lower Bounds for the Topological Entropy Via a Verified Optimization 87
Balazs Banhelyi, Tibor Csendes, Barnabas M. Garay

Nonlinear Adaptive Control of an UncertainWastewater Treatment Model 96
Neli Dimitrova, Mikhail Krastanov

Interval Fuzzy Rule-Based Hand Gesture Recognition 105
Benjam n R. Callejas Bedregal, Gracaliz P. Dimuro, Antonio C. Rocha Costa

Analyzing Properties of Fuzzy Implications Obtained via the Interval Constructor 114
Benjamin C. Bedregal, Regivan H. N. Santiago, Renata H. S. Reiser, Gracaliz P. Dimuro

Interval Analysis of Linear Analog Circuits 122
Alexander Dreyer

A Reliable Convex-Hull Algorithm for Interval-Based Hierarchical Structures 131
Eva Dyllong

Parametric Linear System of Equations, Whose Elements are Nonlinear Functions 138
H. El-Owny

Guaranteed Bounds for Uncertain Systems: Methods Using Linear Lyapunov-like Functions, Differential Inequalities and a Midpoint Method 144
Marc Gennat, Bernd Tibken

On the Approximation of Linear AE-Solution Sets 152
Alexandre Goldsztejn, Gilles Chabert

Rigorous Inner Approximation of the Range of Functions 161
Alexandre Goldsztejn, Wayne Hayes

Ensuring Numerical Quality in Grid Computing 170
Andreas Frommer, Matthias Husken

An Interval Version of the Backward Differentiation (BDF) Method.....179
Malgorzata Jankowska, Andrzej Marcinak

A Workload Analysis Tool for Discrete-time Semi-Markovian Servers.....187
Sebastian Kempken

Efficient 16-bit Floating- Point Interval Processor for Embedded Systems and Applications.....196
Stephane Piskorski, Michel Kieffer, Lionel Lacassagne, Daniel Etiemble

Guaranteed Robust Tracking with Flatness Based Controllers Applying Interval Methods.....205
Marco Kletting, Eberhard P. Hofer, Felix Antritter

Interval Observer Design Based on Taylor Models for Nonlinear Uncertain Continuous-Time Systems.....213
Marco Kletting, Andreas Rauh, Eberhard P. Hofer, Harald Aschemann

Strong Unboundedness of Interval Linear Programming Problems.....222
Jana Kon ckova

intpakX - An Interval Arithmetic Package for Maple.....226
Walter Kramer

Towards Interval Techniques for Processing Educational Data.....235
Olga Kosheleva, Vladik Kreinovich, Luc Longpre, Mourat Tschoshanov, Gang Xiang

Towards Combining Probabilistic, Interval, Fuzzy Uncertainty, and Constraints: An Example Using the Inverse Problem in Geophysics.....244
V. Kreinovich, S. A. Starks, R. Araiza, G. Xiang, A. A. Velasco, G. R. Keller

Adding Constraints to Situations When, In Addition to Intervals,We Also Have Partial Information about Probabilities.....253
Martine Ceberio, Vladik Kreinovich, Gang Xiang, Scott Ferson, Cliff Joslyn

Fast and Accurate Multi-Argument Interval Evaluation of Polynomials.....262
Andreas Frommer, Bruno Lang

Vectorised/Semi-Parallel Interval Multiplication.....270
Eoin Malins, Marek Szularz, Bryan Scotney

On the Interval Gaussian Algorithm.....279
Gunter Mayer

Numerical Computation of the Mapping Degree using Computational Homology.....287
Kansaku Nakakura, Sunao Murashige

Computer-Assisted Proofs in Solving Linear Parametric Problems.....296
Evgenija D. Popova

VALENCIA-IVP: A Comparison with Other Initial Value Problem Solvers.....305
Andreas Rauh, Eberhard P. Hofer, Ekaterina Auer

Interval Techniques for Design of Optimal and Robust Control Strategies.....314
Andreas Rauh, Johanna Minisini, Eberhard P. Hofer

Deterministic Global Optimization for Dynamic Systems Using Interval Analysis.....323
Youdong Lin, Mark A. Stadtherr

Computing the Jordan canonical form in finite precision arithmetic.....332
Toshio Suzuki, Tomohiro Suzuki

The Fundamental Theorems of Interval Analysis.....338
M.H. van Emden, B. Moa

Expression Defined Accuracy.....346
A. Pokorny, J.Wolff von Gudenberg
