Contents

Introduction	iii
Sponsors	iii
SCC 2008 Organizing Committee	iv
SCC 2008 International Scientific Committee	iv

Section 1: Architectural and Precast Concrete

Relationship Between SCC Specification and Casting Conditions for Architectural SCC and the Effect on Superficial Defects	3
<i>A. Pacios, D. González, J.M. Escrivá, and V. Climent</i>	
Self-Compacting Architectural Concrete – Practical Remarks	9
<i>Krzysztof Kuniczuk</i>	
Long Term Behavior of SCC Precast Members	16
<i>Franco Di Fabio, Dante Galeota, Matteo Maurizio Giammatteo, and Amedeo Gregori</i>	
SCC Compressive Strength Variation in Precast Beams and Columns	23
<i>Daniel Hastenpflug and Wellington Longuini Repett</i>	
Self-Consolidating Concrete for R/C Precast Elements in Romania	29
<i>Adrian Ioani, Polidor Bratu, and Henriette Szilagyi</i>	
European Experiences with Self-Compacting Concrete in Precast Concrete Industry	35
<i>Klaus Juvas</i>	
Applications of High Strength SCC in Building Construction	40
<i>A. Gregori, R. Marino, A. Zagaglia, M. Drago, and G. Bason</i>	

Section 2: Case Studies

How To Increase the Market of Ready Mixed SCC – Experiences from Nordic Countries	49
<i>Mats Emborg</i>	
Online Measurement of Air Content in Fresh SCC	59
<i>Aulis Kappi and Erik Nordenswan</i>	
Pump Application for Self-Compacting Concrete under Extreme Conditions	64
<i>Harald Beitzel and Marc Beitzel</i>	
SCC Technology and Concrete Manufacturers' Role	70
<i>Michael Khrapko</i>	

Successful In-Situ Casting With SCC – From an Economical and Rheological Point of View	74
<i>Lars N. Thrane, Claus V. Nielsen, Claus Pade, Mette Glavind, and Jørgen Schou</i>	
Measurements During Concrete Processing in Central Mixed Concrete Plants	80
<i>Bogdan Cazacliu, Nicolas Roquet, and Eric Brunquet</i>	
Evaluations of Self-Consolidating Concrete Using West Virginia Aggregates	85
<i>Arka Bhattacharya, Indrajit Ray, and Julio F. Davalos</i>	
Use of Self-Consolidating Concrete for Bridge Repairs	91
<i>Melissa Titherington and Hannah Schell</i>	
The Application of SCC in Taiwan	98
<i>C.L. Hwang, C.H. Chang, C.T Chen, and T.J. Chen</i>	
Industrialized Construction: Benefits Using SCC and Innovative Production Methods	103
<i>Peter Simonsson and Mats Emborg</i>	
Damming the Dam	109
<i>Campbell Robertson</i>	
SCC as Mass Concrete with Blast Furnace Slag Cement	115
<i>Ariel Goldman and Jeshayahu Sokal</i>	
Behavior of Self-Consolidating Concrete at Cryogenic Temperatures	120
<i>Caroline Talbot</i>	
In Situ Quality Control of Self-Compacting Concrete	125
<i>Sara Cattaneo, Francesca Giussani, and Franco Mola</i>	
Experiences with SCC Mixes Used for Precast Elements and Field Applications in Slovenia	132
<i>Zvonko Cotič, Karmen Koglot, Roko Žarnić, and Violeta Bokan Bosiljkov</i>	
Testing the Theory	137
<i>Campbell Robertson</i>	
Specification and Compliance Criteria for SCC – The Norwegian Procedure	143
<i>Tor Arne Hammer</i>	
Section 3: Chemical Admixtures	
Development of New Superplasticizer and Its Application in Self-Consolidating Concrete	151
<i>Daisuke Hamada, Toshimasa Hamai, Masaaki Shimoda, and Hiromichi Takahashi</i>	
Polycarboxylate Admixture Technology for Precast Self-Consolidating Concrete	157
<i>Viswanath Mahadevan</i>	

A New Slump-Loss-Controlling Agent without Affecting Early Strength Properties	163
<i>Frank Göller, Stefan Dikty, and Tatsuo Izumi</i>	
The Next Generation of High-Range Water-Reducers for Self-Consolidating Concrete Applications	169
<i>Joseph A. Daczko</i>	
Development of Advanced Superplasticizer for Self-Consolidating 100-150MPa High Strength Concrete and Application to High Rise Buildings	175
<i>Kenro Mitsui, Masaro Kojima, and Mitsuo Kinoshita</i>	
Effect of Comb-Type Copolymer with Different Side Chain Lengths on the Rheological Performance of Cement-Active Mineral Admixture	183
<i>Wang Dongmin, Xiong Weifeng, Wu Zengli, Zuo Yanfeng, and Wang Zhenghua</i>	
Re-Use of GRP Industrial By-Product as Filler for SCC	190
<i>Francesca Tittarelli and Giacomo Moriconi</i>	
Study of Fresh Properties of High Strength SCC Using Chemical Admixture with Different Molecule Structures	196
<i>Kaname Saitoh, Hiromi Fujiwara, Masanori Maruoka, and Yasuto Yamanash</i>	
Effect of the Cement Admixture Interaction on the Workability Retention from the Aqueous and Solid Phase Study	203
<i>M. Sánchez, M.C. Alonso, B. Manzanedo, and A. Pacios</i>	
Section 4: Durability	
A Rapid Method for Determination of Chloride Migration Coefficient of Concrete Using Electrical Field	211
<i>C.C. Yang and S.C. Chiang</i>	
Applicability of Durability Requirements of the European Standard EN 206-1 to Self-Compacting Concrete	217
<i>Katrien Audenaert and Geert De Schutter</i>	
Influence of Wet Curing Period on Salt Frost Scaling Resistance of SCC with Limestone Filler	223
<i>Violeta Bokan Bosiljkov, David Duh, and Roko Žarnić</i>	
Durability of Self-Consolidating Concrete Exposed To Aggressive Natural Atmospheres	228
<i>M. Sánchez, M.C. Alonso, and B. Barragán</i>	
Influence of Alkali Sulfate on Superplasticizer Performance in Cement Paste	234
<i>Saksit Plang-ngern and Wanjana Wannaphahoun</i>	

Section 5: Emerging Technologies

Influence of Cement Composition and Admixture Dosage on Properties of Rapid-Setting SCC for Repair Applications – Lessons Learned	243
<i>Prashant V. Ram and Jan Olek</i>	
Curling of Self-Leveling Screeds	250
<i>Jean Ambroise, Tina Le Bihan, Jean-François Georquin, and Jean Péra</i>	
SCC for Concrete Pavement Repair	257
<i>Sherif Yehia, Osama Abudayyeh, Ammar Zalt, and Joseph Barbera</i>	
Superlightweight Self Compacting Concrete	263
<i>Rudolf Hela and Michala Hubertova</i>	
Comparison of Workability and Mechanical Properties of Normal and Lightweight SCCs with and without Steel Fibers	269
<i>M.A. Tasdemir, H.N. Atahan, I. Gokalp, and M. Yerlikaya</i>	
Aggregate Collision and Particle-Fluid Model for Highly Flowable Mortar	275
<i>Gang Lu and Kejin Wang</i>	
Self-Consolidating Pervious Concrete	282
<i>John T. Kevern, Kejin Wang, and Vernon R. Schaefer</i>	
FHWA's Perspective on the Progress of SCC Applications	288
<i>M. Myint Lwin</i>	

Section 6: Formwork Pressure

Modeling Formwork Pressure of SCC	295
<i>David A. Lange, Benjamin Birch, Jacob Henschen, Yi-Shi Liu, Fernando Tejeda-Dominguez, and Leslie J. Struble</i>	
The Influence of Workability Loss and Thixotropy on Formwork Pressure in Self-Compacting Concrete Containing Stabilizers	301
<i>Sonja Oesterheld, Florian V. Mueller, and Olafur H. Wallevik</i>	
Test Methods to Evaluate Form Pressure of SCC	308
<i>K.H. Khayat, A. Omran, S. Neji, T.P. Billberg, and A. Yahia</i>	
Prediction Model for SCC Formwork Pressure	315
<i>Seung Hee Kwon and Surendra P. Shah</i>	
Fresh Concrete Pressure of Self-Compacting Concrete on a Vertical Formwork	324
<i>Marc Beitzel, Harald Beitzel, and Harald S. Müller</i>	
Residential Construction Based on Integral Formworks	330
<i>Pere Borralleras Mas</i>	
The Use of Methylcellulose-Based Viscosity Modifying Agents for Self-Compacting Concrete	335
<i>Andreas Leemann, Cathleen Hoffmann, Frank Winnefeld, Marc Schmitz, and Roland Bayer</i>	

Section 7: Fiber-Reinforced SCC

Effect of Fine to Coarse Aggregate Ratio on Workability and Fracture Properties of Steel Fiber Reinforced Self Consolidating Concrete	343
<i>Mert Yucel Yardimcia, Bulent Baradana, and Mehmet Ali Tasdemir</i>	
Fiber Reinforced Self-Compacting Concrete with High Wear Resistance	349
<i>Guido Krage and Ólafur H. Wallevik</i>	
Fiber Reinforced Self-Compacting Concrete for Structural Applications	354
<i>A. Gregori, R. Marino, C. Pistolesi, M. Bovassi, and A. Lolli</i>	
Effect of Fiber Type on Workability and Mechanical Properties of SCC	361
<i>K.H. Khayat, P. Ghoddousi, and F. Kassimi</i>	
Effect of Polypropylene and Steel Fibers on Properties of Self-Compacting Concrete	367
<i>H. Yildirim, B. Sertbas, V. Berbergil, and A. Naaman</i>	
Shrinkage Cracking of Steel Fibre Reinforced SCC Overlays	373
<i>Jonas Carlswärd and Mats Emborg</i>	

Section 8: Hydration

Hydration, Microstructure, Transport Properties and Durability of Self-Compacting Concrete	381
<i>Geert De Schutter</i>	
Impact of Aluminate Ions on the Properties of Saltstone Grout Mixes	387
<i>J.R. Harbour, T.B. Edwards, E.K. Hansen, and V.J. Williams</i>	
Effect of Nano Particles in New Generation of Concretes, SCC	392
<i>Ali Akbar Maghsoudi, Mohammad Jalal Soheil, and Abbas Darbhenzi</i>	
DR-FTIR Method for the Study of Early Hydration of Cement	399
<i>Rikard Ylmén, Kristian Larsson, Ulf Jäglid, Itai Panas, and Britt-Marie Steenari</i>	
Nano Scale Characterization of Self-Consolidating Concrete	406
<i>A.K. Reinhardt, M. Tehrani, M. Al-Haik, and M.M. Reda Taha</i>	
Impact of Calcium Carbonate Morphology on Self-Compacting Concrete Performance	412
<i>A.H. Asbridge and C. Paynter</i>

Contents

Section 9: Mechanical Properties — Modeling

Use of Different Prediction Models to Compare the Mechanical Properties of Self Compacting Concrete and Conventional Concrete	421
<i>Ana Carolina Marques, Luciana Tiemi Kataoka, Marcelo Augusto da Silva Machado, André Luiz Nonato Ferraz, Mônica Pinto Barbosa, and Túlio Nogueira Bittencourt</i>	
Post-Peak Response of Confined SCC	427
<i>Bernardino Chiaia, Alessandro P. Fantilli, and Paolo Vallini</i>	
Bond Strength of Reinforcing Bars in Self-Compacting Concrete: Experimental Determination	433
<i>Pieter Desnerck, Geert De Schutter, and Luc Taerwe</i>	
Aligning Fibers Along the Flow Direction for High Mechanical Performance of Self Consolidating SFRC	439
<i>Liberato Ferrara, Marco di Prisco, and Rabinder S. Khurana</i>	
Mechanical Properties of Self-Compacting Concrete at High Temperature and After Cooling	445
<i>Patrick Bamonte, Roberto Felicetti, and Pietro G. Gambarova</i>	
Bond Strength of Self Consolidating Concrete	451
<i>Sherif Yehia, Osama Abudayyeh, Mike Maurovich, and Ammar Zalt</i>	
Influence of Elevated Temperatures on the Mechanical Properties of Self-Consolidating Concrete (SCC) Containing Pozzolanic Materials	457
<i>Ali Akbar Ramezaniapour and Reza Esmaili</i>	

Section 10: Mix Design

Rheology of Fiber Reinforced Cementitious Materials: Classification and Prediction	465
<i>Laetitia Martinie, Pierre Rossi, and Nicolas Roussel</i>	
Mix-Design Optimization of Steel Fiber Reinforced SCC	470
<i>Liberato Ferrara and Nilufer Ozyurt</i>	
Evaluation of SCC Mix Design for Moderately- and Heavily-Reinforced Members Using West Virginia Aggregates	476
<i>Joseph G. Sweet and Roger H.L. Chen</i>	
Effect of Aggregate Type on Modulus of Elasticity of High Strength Self Consolidating Concretes	482
<i>H. Yildirim, A. Karadag, and H.N. Atahan</i>	
Influence of Silt Content of Fine Aggregate on the Properties of Concrete	488
<i>S.W. Cho and W.C. Liu</i>	

Wet Particle Packing Analysed with the Krieger-Dougherty Equation 494
Klaartje De Weerd

Mix Design of Self-Compacting Concrete – From the Laboratory to the Concrete Plant 500
Andreas Leemann

Performance of SCC Obtained with Different Mortar Contents 505
Paulo Jorge M. Manuel, Angela Masuero, and Denise Dal Molin

Section 11: Rheology

Self-Compactability of Fresh Concrete in Terms of Dispersion and
 Coagulation of Particles of Cement Subject to Pumping 513
Masahiro Ouchi and Jiro Sakue

Impact of Fine Aggregate Volume on Rheology of Mortar for
 Self Compacting Concrete (SCC) 518
Subrato Chowdhury

Production Related Aspects of Self-Compacting Concrete 523
B. Barragán, R. Zerbino, T. García, L. Agulló, and R. Gettu

Influence of Hauling Time on Fresh Performance of Self Consolidating Concretes 529
Nader Ghafouri and Hamidou Diawara

A Novel Field Instrument to Measure Rheological Properties of Self-Compacting Concrete 534
Olafur H. Wallevik and Bjorn Hjartarson

Sensitivity of SCC Mortar Mixtures to Cement Variations 540
Sandra Nunes, Paula Milheiro Oliveira, Joana Sousa Coutinho, and Joaquim Figueiras

Effect of the Temperature and Waiting Conditions on the
 Rheological Parameters of Self-Compacting Concrete 546
Joana Roncero, Bryan Barragán, and Raúl Zerbino

Section 12: Rheology and Workability

Determination of Rheological Parameters of Self-Consolidating Concrete
 Using Computational Fluid Dynamics 555
Stephan Uebachs and Wolfgang Brameshuber

Particulate Reference Materials for Rheometers 561
Chiara F. Ferraris, Min-Hong Zhang, Huaning Zhu, and Nicos Martys

Use of Viscosity-Modifying Admixtures to Enhance Robustness of SCC 566
Peter Billberg and Kamal H. Khayat

How to Obtain a Self Compacting Concrete with No Filler Addition
 by Studying Paste Rheology 572
Faber Fabbris

Particle Dependency of Self-Compacting Concrete Rheological Properties on the Aggregate Volume Fraction: A Change of Scale Approach	578
<i>X. Chateau and K.L. Trung</i>	
Influence of Cement Composition on Concrete Rheology	584
<i>Hedda Vikan and Knut O. Kjellsen</i>	
Method of Retrieving the Herschel-Bulkley Parameters When Using the (Wide-Gap) Coaxial Cylinders Viscometer	590
<i>Jon E. Wallevik</i>	
Tuning Properties of Paste Layers	596
<i>Mario R. de Rooij and Alex L.A. Fraaij</i>	
Smart Dynamic Concrete: New Approach for the Ready-Mixed Industry	602
<i>Joana Roncero, Mario Corradi, Rabinder S. Khurana, Roberta Magarotto, and Sandro Moro</i>	
Rheological Evaluation of Soy Methyl-Ester Polystyrene (SME-PS) Blends in Cement Pastes	608
<i>Kevin C. Coates, Marika C. Santagata, Samia Mohtar, Bernard Y. Tao, and Jason Weiss</i>	
Effects of Solids Packing Density on Rheology of SCC-Equivalent Mortar	614
<i>Wilson W. S. Fung, Ivan Y. T. Ng, Henry H. C. Wong, and Albert K. H. Kwan</i>	
Effect of Coarse Particle Volume Fraction on the Yield Stress and Thixotropy of SCC	620
<i>F. Mahaut, S. Mokéddem, X. Chateau, N. Roussel, and G. Ovarlez</i>	
Self-Consolidating Concrete for Floor Slab and Screed Applications	626
<i>Stephan Uebachs and Wolfgang Brameshuber</i>	
Full Scale Pumping Tests on SCC: Test Description and Results	631
<i>Dimitri Feys, Ronny Verhoeven, and Geert De Schutter</i>	
Full Scale Pumping Tests on SCC: Application of the Modified Hattori-Izumi Theory	637
<i>Dimitri Feys, Ronny Verhoeven, and Geert De Schutter</i>	
Cement-Admixture Interaction – The Effect of Different Cement Deliveries on Rheology, Workability and Hydration of Mortar and SCC	642
<i>Stefan Kubens and Olafur H. Wallevik</i>	
Evaluation of the Pressure-Loss-Causing Mechanism of Self-Compacting Concrete	648
<i>Masanori Maruoka, Hiromi Fujiwara, Erika Ogura, and Yasuto Yamanashi</i>	
The Thixometer: A Simple Test Allowing for the Measurement of the Thixotropic Behavior of SCC	653
<i>Jean Lett, Guillaume Ovarlez, and Nicolas Roussel</i>	
Effects of Coarse Aggregate Grading on Performance of Self-Consolidating Concrete	658
<i>Ivan Y. T. Ng, Wilson W. S. Fung, and Albert K. H. Kwan</i>	

Section 12: Rheology and Workability (continued)

Rheological Description of Optimized Paste for SCC	664
<i>Steffen Grünewald and Joost C. Walraven</i>	
Influence of Demoulding Oil on the Rheological Properties of Fresh SCC	670
<i>Dimitri Feys, Ronny Verhoeven, and Geert De Schutter</i>	
Research on Flocculation of Cement Particles in Water	675
<i>Yanfeng Zuo and Dongmin Wang</i>	

Section 13: Segregation

Modeling Segregation of SCC	685
<i>Lin Shen, Leslie Struble, and David Lange</i>	
Development of Test Method to Evaluate Dynamic Segregation Resistance of Self-Compacting Concrete	691
<i>Zhuguo Li and Minoru Iidaka</i>	
Static and Dynamic Yield Stress Measurements of SCC	698
<i>Eric P. Koehler and David W. Fowler</i>	
A Rapid Evaluation of Stability of Self-Consolidating Concrete	704
<i>Van Bui and Emmanuel Attiogbe</i>	
Measuring Dynamic Segregation of SCC	710
<i>Lin Shen, Leslie Struble, and David Lange</i>	
Predictive Analysis of Components to Obtain an Oriented Robustness	714
<i>Marco Francini</i>	

Section 14: Structural Behavior

The Transfer of Shear Forces on the Surface of Self-Compacting Concrete	723
<i>Steffen Grünewald and Wim Bensenk</i>	
Experimental and F.E Modelling of Prestressed SCC-T-Beams	729
<i>A. A. Maghsoudi and M. Farahbakhsh</i>	
Bond Strength in Limestone Self-Compacting Concrete	736
<i>Sara Cattaneo, Giovanni Muciaccia, and Gianpaolo Rosati</i>	
Behavior of Self-Compacting R.C. Beams	742
<i>Luigi Biolzi, Sara Cattaneo, and Franco Mola</i>	
Structural Behavior of SCC Prestressed Girders	749
<i>Young Hoon Kim, Mary Beth D. Hueste, and David Trejo</i>	
Research into Properties of Self-Compacting Concrete Beams under Combined Actions	755
<i>Yu Zhiwu, Liu Xiaojie, and Chen Xuewen</i>	

Section 15: Sustainability and Green SCC

Eco-Efficiency Analysis of Self-Consolidating Concrete (SCC): How to Make SCC Greener	763
<i>Andreas Tselebidis and Mark A. Bury</i>	
Development of Sustainable Fiber Reinforced Self Compacting Concrete Using Recycled Aggregate	769
<i>M.L.V. Prasad and P. Rathish Kumar</i>	
Benefits of Filler Materials on Rheology in Eco-SCC	777
<i>Florian V. Müller and Olafur H. Wallevik</i>	
Effect of the Cement Kiln Dust as Filler in SCC	783
<i>G. Rodríguez de Sensale, D. Miguez, S. Sabalsagaray, C. Romay, and C. Benavidez</i>	
Taiwan Experience of Green Design and Performance of SCC	789
<i>C.L. Hwang, S.L. Hsieh, C. T. Chen, and Y.Y. Chen</i>	
SCC with Secondary Raw Materials	795
<i>Rudolf Hela and Lenka Bodnarova</i>	

Section 16: Time-Dependent Properties

Creep Behavior of Self-Consolidating Concrete	803
<i>Bryan P. Kavanaugh, Anton K. Schindler, and Robert W. Barnes</i>	
Evaluation of Time Dependent Properties of a SCC Mix	809
<i>Sherif Yehia, Osama Abudayyeh, Ammar Zalt, and Joseph Barbera</i>	
Total and Basic Creep and Shrinkage of Self-Consolidating Concrete	815
<i>A.K. Reinhardt, I.A. Adam, and M.M. Reda Taha</i>	
Influence of Aggregate Grading and Cement Paste Volume on Drying Shrinkage of Self Consolidating Concrete	821
<i>P. Ghoddousi and A. Monir Abbasi</i>	
Evaluation of the Eurocode EC-2 and ACI 209-92 Shrinkage Estimating Model Applied to Self Consolidating Concrete	827
<i>Galit Agranati Landsberger and Jaime Fernandez-Gomez</i>	
Comparison Between Long Term Properties of Self Compacting Concretes with Different Strength	833
<i>Claudio Mazzotti and Claudio Ceccoli</i>	
Shrinkage of Medium Strength Self-Consolidating Concrete	839
<i>Xie You-jun, Yu Zhi-wu, and Long Guang-cheng</i>
