## RESEARCH TRACKS

### Research Track 1: Services Systems

|                                                                                                                |    |
|----------------------------------------------------------------------------------------------------------------|----|
| SATE--Service Boundary and Abstraction Threshold Estimation for Efficient<br>Services Design .....             | 1  |
| <i>Kalapriya Kanan, Gandhi Sivakumar, and Nanjangud C. Narendra</i>                                            |    |
| Adaptive Request Prioritization in Dynamic Service-Oriented Systems .....                                      | 9  |
| <i>Roman Khazankin, Daniel Schall, and Schahram Dustdar</i>                                                    |    |
| Proactive SLA Negotiation for Service Based Systems: Initial Implementation<br>and Evaluation Experience ..... | 16 |
| <i>Khaled Mahbub and George Spanoudakis</i>                                                                    |    |

### Research Track 2: Cloud Management

|                                                                                                            |    |
|------------------------------------------------------------------------------------------------------------|----|
| Introducing Semantics to Cloud Services Catalogs .....                                                     | 24 |
| <i>Yu Deng, Michael R. Head, Andrzej Kochut, Jonathan Munson, Anca Sailer,<br/>and Hidayatullah Shaikh</i> |    |
| Dynamic Processor Resource Configuration in Virtualized Environments .....                                 | 32 |
| <i>Hai Jin, Li Deng, Song Wu, and Xuanhua Shi</i>                                                          |    |

|                                                                                                             |    |
|-------------------------------------------------------------------------------------------------------------|----|
| Data Augmentation as a Service for Single View Creation .....                                               | 40 |
| <i>Ullas Nambiar, Tanveer A. Faruque, K. Hima Prasad,<br/>L. Venkata Subramaniam, and Mukesh K. Mohania</i> |    |

### **Research Track 3: Service Discovery**

|                                                                                                       |    |
|-------------------------------------------------------------------------------------------------------|----|
| Recommend-As-You-Go: A Novel Approach Supporting Services-Oriented<br>Scientific Workflow Reuse ..... | 48 |
| <i>Jia Zhang, Wei Tan, John Alexander, Ian Foster, and Ravi Madduri</i>                               |    |
| QoS-Based Service Ranking and Selection for Service-Based Systems .....                               | 56 |
| <i>Stephen S. Yau and Yin Yin</i>                                                                     |    |
| Self-Adaptive Fuzzy QoS-Driven Web Service Discovery .....                                            | 64 |
| <i>Romina Torres, Hernán Astudillo, and Rodrigo Salas</i>                                             |    |

### **Research Track 4: Cloud Migration**

|                                                                                                                                              |    |
|----------------------------------------------------------------------------------------------------------------------------------------------|----|
| Improving Performance and Availability of Services Hosted on IaaS Clouds<br>with Structural Constraint-Aware Virtual Machine Placement ..... | 72 |
| <i>Deepal Jayasinghe, Calton Pu, Tamar Eilam, Malgorzata Steinder, Ian Whally,<br/>and Ed Snible</i>                                         |    |
| Migration to Multi-image Cloud Templates .....                                                                                               | 80 |
| <i>Birgit Pfitzmann and Nikolai Joukov</i>                                                                                                   |    |
| Management of SOA-Based Context-Aware Applications Hosted in<br>a Distributed Cloud Subject to Percentile Constraints .....                  | 88 |
| <i>Keerthana Boloor, Rada Chirkova, Tiia Salo, and Yannis Viniotis</i>                                                                       |    |

### **Research Track 5: Service Measurement**

|                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Dynamic Fractal Clustering Technique for SOAP Web Messages .....                                                                                      | 96  |
| <i>Dhiah Al-Shammary and Ibrahim Khalil</i>                                                                                                           |     |
| Enhancing Penetration Testing with Attack Signatures and Interface<br>Monitoring for the Detection of Injection Vulnerabilities in Web Services ..... | 104 |
| <i>Nuno Antunes and Marco Vieira</i>                                                                                                                  |     |
| Provisioning Norm: An Asymmetric Quality Measure for SaaS Resource<br>Allocation .....                                                                | 112 |
| <i>M. Brent Reynolds, Kenneth M. Hopkinson, Mark E. Oxley, and Barry E. Mullins</i>                                                                   |     |

## Research Track 6: Workflow Management

|                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------|-----|
| Automated Attribute Inference in Complex Service Workflows Based<br>on Sharing Analysis .....           | 120 |
| <i>Dragan Ivanović, Manuel Carro, and Manuel Hermenegildo</i>                                           |     |
| Semantic Notions of Weakly Correct AND/XOR Business Workflows Based<br>on Partial Synchronization ..... | 128 |
| <i>Akhil Kumar, Anup K. Sen, Meda H. Sundari, and Amitava Bagchi</i>                                    |     |
| OPQL: A First OPM-Level Query Language for Scientific Workflow<br>Provenance .....                      | 136 |
| <i>Chunhyeok Lim, Shiyong Lu, Artem Chebotko, and Farshad Fotouhi</i>                                   |     |

## Research Track 7: Service Composition

|                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------|-----|
| Top-k Web Service Compositions Using Fuzzy Dominance Relationship .....                                    | 144 |
| <i>Karim Benouaret, Djamel Benslimane, Allel Hadjali, and Mahmoud Barhamgi</i>                             |     |
| Bridging the Gap between Semantic Web Service Composition and Common<br>Implementation Architectures ..... | 152 |
| <i>Fuyuki Ishikawa, Satoshi Katafuchi, Florian Wagner, Yoshiaki Fukazawa,<br/>and Shinichi Honiden</i>     |     |
| Exception Diagnosis for Composite Service Based on Error Propagation<br>Degree .....                       | 160 |
| <i>Yu Dai, Lei Yang, Bin Zhang, and Zhiliang Zhu</i>                                                       |     |

## Research Track 8: Service Quality Modeling

|                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------|-----|
| A Game Theoretic Approach for Analyzing the Efficiency of Web Services<br>in Collaborative Networks ..... | 168 |
| <i>Babak Khosravifar, Mahsa Alishahi, Jamal Bentahar, and Philippe Thiran</i>                             |     |
| A Composed Approach for Automatic Classification of Web Services<br>Robustness .....                      | 176 |
| <i>Rui Oliveira, Nuno Laranjeiro, and Marco Vieira</i>                                                    |     |
| Modeling and Analysis of Dependability Attributes of Service Computing<br>Systems .....                   | 184 |
| <i>Jiwei Huang, Chuang Lin, Xiangzhen Kong, and Yemei Zhu</i>                                             |     |
| Evaluating Feedback Ratings for Measuring Reputation of Web Services .....                                | 192 |
| <i>Shangguang Wang, Zibin Zheng, Qibo Sun, Hua Zou, and Fangchun Yang</i>                                 |     |

## Research Track 9: Workflow Modeling

|                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------|-----|
| Modelling Workflow Executions under Role-Based Authorisation Control .....                                     | 200 |
| <i>Ligang He, Kewei Duan, Xueguang Chen, Deqing Zou, Zongfen Han,<br/>Ali Fadavinia, and Stephen A. Jarvis</i> |     |
| Detecting Concurrency-Related Problematic Activity Arrangement<br>in WS-BPEL Programs .....                    | 209 |
| <i>Yitao Ni, Lu Zhang, Zhongjie Li, Tao Xie, and Hong Mei</i>                                                  |     |
| Precise Mappings between Business Process Models in Versioning Scenarios .....                                 | 218 |
| <i>Christian Gerth, Markus Luckey, Jochen M. Küster, and Gregor Engels</i>                                     |     |

## APPLICATIONS AND EXPERIENCES TRACKS

### Applications and Experiences Track 1: Workflow Management

|                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------|-----|
| How Physical Objects and Business Workflows Can Be Correlated .....                                              | 226 |
| <i>Andreas Wombacher</i>                                                                                         |     |
| Undoing Event-Driven Adaptation of Business Processes .....                                                      | 234 |
| <i>Sébastien Mosser, Gabriel Hermosillo, Anne-Françoise Le Meur,<br/>Lionel Seinturier, and Laurence Duchien</i> |     |
| Reference Models for SaaS Oriented Business Workflow Management<br>Systems .....                                 | 242 |
| <i>Bin Wu, Shuiguang Deng, Ying Li, Jian Wu, and Jianwei Yin</i>                                                 |     |

### Applications and Experiences Track 2: Service Composition and Verification

|                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------|-----|
| Comparison of Bio-inspired Algorithms for Peer Selection in Services<br>Composition .....                     | 250 |
| <i>Jun Shen, Ghassan Beydoun, Shuai Yuan, and Graham Low</i>                                                  |     |
| A Spring Based Framework for Verification of Service Composition .....                                        | 258 |
| <i>Anshuman Mukherjee, Zahir Tari, and Peter Bertok</i>                                                       |     |
| Flexible Ontology-Independent and QOS-Enabled Dynamic Web Services<br>Composition Using Google Distance ..... | 266 |
| <i>R. Ding and D.N. Jutla</i>                                                                                 |     |

## **Applications and Experiences Track 3: Service Composition and Analysis**

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| Towards an Automated Gap Analysis for E-Service Portfolios .....                               | 274 |
| <i>Norman May, Ulrich Scholten, and Robin Fischer</i>                                          |     |
| Adaptive QoS-Aware Service Process Reconfiguration .....                                       | 282 |
| <i>Jing Li, Dianfu Ma, Xiupei Mei, Hailong Sun, and Zibin Zheng</i>                            |     |
| Analyzing Fault-Impact Region of Composite Service for Supporting Fault Handling Process ..... | 290 |
| <i>Azlan Ismail, Jun Yan, and Jun Shen</i>                                                     |     |

## **Applications and Experiences Track 4: Semantic Services**

|                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------|-----|
| Reconciliation of Ontology Mappings to Support Robust Service Interoperability .....                            | 298 |
| <i>Asad Masood Khattak, Zeeshan Pervez, Khalid Latif, A.M. Jehad Sarkar, Sungyoung Lee, and Young-Koo Lee</i>   |     |
| Correlating Business Objectives with Services: An Ontology-Driven Approach .....                                | 306 |
| <i>Lam-Son Lê, Aditya K. Ghose, Muralee Krishnan, Krishnajith M. Krishnankunju, and Konstantin Hoesch-Klohe</i> |     |
| Discovering Linkage Patterns among Web Services Using Business Process Knowledge .....                          | 314 |
| <i>Mohammed AbuJarour and Ahmed Awad</i>                                                                        |     |

## **Applications and Experiences Track 5: Service Selection**

|                                                                          |     |
|--------------------------------------------------------------------------|-----|
| Web Service Selection Based on Similarity Evaluation .....               | 322 |
| <i>Hao Gao, Jun Yan, and Yi Mu</i>                                       |     |
| Reputation-Based Selection of Language Services .....                    | 330 |
| <i>Shinsuke Goto, Yohei Murakami, and Toru Ishida</i>                    |     |
| Preference-Based Discovery of Dynamically Generated Service Offers ..... | 338 |
| <i>Maciej Zaremba, Tomas Vitvar, Sami Bhiri, and Manfred Hauswirth</i>   |     |

## **Applications and Experiences Track 6: Services Composition**

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| Controlled Flexibility in Business Processes Defined for Service Compositions ..... | 346 |
| <i>Malinda Kapuruge, Jun Han, and Alan Colman</i>                                   |     |
| CBBCM: Clustering Based Automatic Service Composition .....                         | 354 |
| <i>Ying Ma, Liang Chen, Jian Hui, and Jian Wu</i>                                   |     |
| QoS-Driven Service Composition with Multiple Flow Structures .....                  | 362 |
| <i>Wen-jun Li, Xi Li, Xiao-jun Liang, and Xiao-cong Zhou</i>                        |     |

## **Applications and Experiences Track 7: Service Pricing**

|                                                                                        |     |
|----------------------------------------------------------------------------------------|-----|
| Towards Pay-As-You-Consume Cloud Computing .....                                       | 370 |
| <i>Shadi Ibrahim, Bingsheng He, and Hai Jin</i>                                        |     |
| Price Heuristics for Highly Efficient Profit Optimization of Service Composition ..... | 378 |
| <i>Xianzhi Wang, Zhongjie Wang, and Xiaofei Xu</i>                                     |     |
| Differentiated Service Pricing on Social Networks Using Stochastic Optimization .....  | 386 |
| <i>Alexei A. Gaivoronski and Denis Becker</i>                                          |     |

## **Applications and Experiences Track 8: Evolutionary Service Composition**

|                                                                                        |     |
|----------------------------------------------------------------------------------------|-----|
| Client Update: A Solution for Service Evolution .....                                  | 394 |
| <i>Meriem Ouederni, Gwen Salaün, and Ernesto Pimentel</i>                              |     |
| Cultural Language Service: A Discovery, Composition and Organization .....             | 402 |
| <i>Arif Bramantoro and Toru Ishida</i>                                                 |     |
| A Granular Concurrency Control for Collaborative Scientific Workflow Composition ..... | 410 |
| <i>Xubo Fei, Shiyong Lu, and Jia Zhang</i>                                             |     |

## **Applications and Experiences Track 9: Service Monitoring and Testing**

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| Magnifier: Online Detection of Performance Problems in Large-Scale Cloud Computing Systems ..... | 418 |
| <i>Haibo Mi, Huaimin Wang, Gang Yin, Hua Cai, Qi Zhou, Tingtao Sun, and Yangfan Zhou</i>         |     |
| Building a Service-Oriented Monitoring Framework with REST and Nagios .....                      | 426 |
| <i>Gregory Katsaros, Roland Kübert, and Georgina Gallizo</i>                                     |     |
| Model-Based Testing of Service-Oriented Applications via State Models .....                      | 432 |
| <i>Andre Takeshi Endo and Adenilso Simao</i>                                                     |     |

## **Applications and Experiences Track 10: Service Applications**

|                                                                          |     |
|--------------------------------------------------------------------------|-----|
| IRTG: A Grid Middleware for Bioinformatics .....                         | 440 |
| <i>Kamal Taha and Ramez Elmasri</i>                                      |     |
| OdinTools--Model-Driven Development of Intelligent Mobile Services ..... | 448 |
| <i>Andrew Meads and Ian Warren</i>                                       |     |

## **Applications and Experiences Track 11: Service Quality Control**

|                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------|-----|
| Fine-Grained Modeling of Web Services for Test-Based Security Certification .....                      | 456 |
| <i>Marco Anisetti, Claudio A. Ardagna, and Ernesto Damiani</i>                                         |     |
| Optimizing DaaS Web Service Based Data Mashups .....                                                   | 464 |
| <i>Mahmoud Barhamgi, Chirine Ghedira, Djamal Benslimane, Salah-Eddine Tbahrati, and Michael Mrissa</i> |     |
| A New Approach for Quality Enforcement in Communities of Web Services .....                            | 472 |
| <i>Abdelghani Benharref, M. Adel Serhani, Salah Bouktif, and Jamal Bentahar</i>                        |     |

## **Applications and Experiences Track 12: Service Models**

|                                                                                                              |     |
|--------------------------------------------------------------------------------------------------------------|-----|
| A Dependency-Aware Hierarchical Service Model for SaaS and Cloud Services .....                              | 480 |
| <i>Rui Wang, Yong Zhang, Shijun Liu, Lei Wu, and Xiangxu Meng</i>                                            |     |
| A Clustering Based Schema Matching Scheme for Improving Matching Correctness of Web Service Interfaces ..... | 488 |
| <i>Byoungoh Kim, Ho Namkoong, Dongman Lee, and Soon J. Hyun</i>                                              |     |

## **Applications and Experiences Track 13: Quality Measurement**

|                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| A Petri-Net Model for the Publish-Subscribe Paradigm and Its Application for the Verification of the BonjourGrid Middleware ..... | 496 |
| <i>Leila Abidi, Christophe Cérin, and Sami Evangelista</i>                                                                        |     |
| Measuring the Conceptual Coupling of Services Using Latent Semantic Indexing .....                                                | 504 |
| <i>Ali Kazemi, Ali Nasirzadeh Azizkandi, Ali Rostampour, Hassan Haghighi, Pooyan Jamshidi, and Fereidoon Shams</i>                |     |
| A Metrics Framework for Evaluating SOA Service Granularity .....                                                                  | 512 |
| <i>Saad Alahmari, Ed Zaluska, and David C. De Roure</i>                                                                           |     |

## **Applications and Experiences Track 14: Service Allocation**

|                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------|-----|
| Jerrymouse: A Tool for a Flexible and Dynamic Distribution of Web Service Requests .....                               | 520 |
| <i>Paulo S.L. de Souza, Bruno S. Faiçal, Marcos J. Santana, Regina H.C. Santana, Jonathan de Matos, and Ed Zaluska</i> |     |
| On-Line Real-Time Service Allocation and Scheduling for Distributed Data Centers .....                                 | 528 |
| <i>Shuo Liu, Gang Quan, and Shangping Ren</i>                                                                          |     |

|                                                                       |     |
|-----------------------------------------------------------------------|-----|
| An Enhanced PROMETHEE Model for QoS-Based Web Service Selection ..... | 536 |
| <i>Raed Karim, Chen Ding, and Chi-Hung Chi</i>                        |     |

## INDUSTRY TRACKS

### Industry Track 1: Enterprise Management

|                                                                           |     |
|---------------------------------------------------------------------------|-----|
| Towards a Service-Oriented Component Model for Autonomic Management ..... | 544 |
| <i>Yoann Maurel, Philippe Lalanda, and Ada Diaconescu</i>                 |     |
| Managing Enterprise IT Systems Using Online Communities .....             | 552 |
| <i>Maja Vukovic and Vijay K. Naik</i>                                     |     |
| Managing Software Assets in a Global Enterprise .....                     | 560 |
| <i>Matthew A. McCarthy and Lorraine M. Herger</i>                         |     |

### Industry Track 2: Services Applications

|                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------|-----|
| Intelligent Scheduling Algorithm and Application in Modernizing Manufacturing<br>Services .....         | 568 |
| <i>Yaojun Chen, Liang-Jie Zhang, and Qian Wang</i>                                                      |     |
| Application Framework for Efficient Development of Sensor as a Service<br>for Home Network System ..... | 576 |
| <i>Masahide Nakamura, Shuhei Matsuo, Shinsuke Matsumoto,<br/>Hiroyuki Sakamoto, and Hiroshi Igaki</i>   |     |

### Industry Track 3: Services Development Frameworks

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| Leveraging Cloud Platform for Custom Application Development .....                                                                   | 584 |
| <i>Nianjun Zhou, Da Peng An, Liang-Jie Zhang, and Chih-Hong Wong</i>                                                                 |     |
| Capability Diagnostics of Enterprise Service Architectures Using a Dedicated<br>Software Architecture Reference Model .....          | 592 |
| <i>Alfred Zimmermann, Helge Buckow, Hans-Jürgen Groß, Oliver F. Nandico,<br/>Gunther Piller, and Karl Prott</i>                      |     |
| REFINTO: An Ontology-Based Requirements Engineering Framework<br>for Business-IT Alignment in Financial Services Organizations ..... | 600 |
| <i>Emem Umoh, Pedro R. Falcone Sampaio, and Babis Theodoulidis</i>                                                                   |     |

### Industry Track 4: Services Selection and Composition

|                                                                                 |     |
|---------------------------------------------------------------------------------|-----|
| Providing Map and GPS Assistance to Service Composition in Bioinformatics ..... | 608 |
| <i>Wei Tan, Jia Zhang, Ravi Madduri, Ian Foster, and David De Roure</i>         |     |

|                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------|-----|
| Building FCA-Based Decision Trees for the Selection of Heterogeneous Services .....                             | 616 |
| <i>Stéphanie Chollet, Vincent Lestideau, Philippe Lalanda, Yoann Maurel, Pierre Colomb, and Olivier Raynaud</i> |     |
| Composition Context Matching for Web Service Recommendation .....                                               | 624 |
| <i>Nguyen Ngoc Chan, Walid Gaaloul, and Samir Tata</i>                                                          |     |
| ServiceMap: Providing Map and GPS Assistance to Service Composition in Bioinformatics .....                     | 632 |
| <i>Wei Tan, Jia Zhang, Ravi Madduri, Ian Foster, David De Roure, and Carole Goble</i>                           |     |

## Industry Track 5: Services Testing

|                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------|-----|
| An Event-Driven Approach for Runtime Verification of Inter-organizational Choreographies .....           | 640 |
| <i>Aymen Baouab, Olivier Perrin, and Claude Godart</i>                                                   |     |
| Verify Enterprise System Implementation through Business Process Model-Based Test Suite Generation ..... | 648 |
| <i>Bing Shao, Qinhua Wang, Changrui Ren, Miao He, and Jin Dong</i>                                       |     |
| A Novel Test and Evaluation Scheme for WS-Management Protocol and Its Implementation .....               | 655 |
| <i>ZhiHui Lu, XiaoHong Gao, and Jie Wu</i>                                                               |     |

## Industry Track 6: Services Monitoring

|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| A Real-Time Risk Assessment and Mitigation Engine Based on Dynamic Context .....          | 663 |
| <i>Sinem Güven and Catalin Mihai Barbu</i>                                                |     |
| A Business Centric Monitoring Approach for Heterogeneous Service Composites .....         | 671 |
| <i>Geetika T. Lakshmanan, Paul T. Keyser, Aleksander Slominski, and Francisco Curbera</i> |     |
| Sustainable Service Level Agreements .....                                                | 679 |
| <i>Thiago Barroero, Gianmario Motta, and Marco Durante</i>                                |     |

## Industry Track 7: Business Process Management

|                                                                                    |     |
|------------------------------------------------------------------------------------|-----|
| Towards a Constraint-Based Framework for Dynamic Business Process Adaptation ..... | 685 |
| <i>Zan Xiao, Donggang Cao, Chao You, and Hong Mei</i>                              |     |
| Uniform Modeling of Resources and Business Processes Using Business Entities ..... | 693 |
| <i>Rong Liu, Anil Nigam, Zhe Shan, and Frederick Wu</i>                            |     |

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| LiSEP: A Lightweight and Extensible Tool for Complex Event Processing ..... | 701 |
| <i>Ivan Zappia, David Parlanti, and Federica Paganelli</i>                  |     |

## Industry Track 8: Case Studies

|                                                                               |     |
|-------------------------------------------------------------------------------|-----|
| SOMP: Service-Oriented Multi Processors .....                                 | 709 |
| <i>Chao Wang, Junneng Zhang, Xuehai Zhou, Xiaojing Feng, and Xiaoning Nie</i> |     |
| Sensor Service Selection through Switch Options .....                         | 717 |
| <i>Sahin Cem Geyik, Boleslaw Szymanski, Petros Zefos, and Abbe Mowshowitz</i> |     |

## WORK-IN-PROGRESS TRACKS

### Work-in-Progress Track 1: Services Discovery

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| QoS-Based Distributed Service Selection in Large-Scale Web Services .....           | 725 |
| <i>Limin Pan, Liang Chen, Jian Hui, and Jian Wu</i>                                 |     |
| An Enhanced QoS Prediction Approach for Service Selection .....                     | 727 |
| <i>Liang Chen, Yipeng Feng, Jian Wu, and Zibin Zheng</i>                            |     |
| A Clustering Method for Web Service Discovery .....                                 | 729 |
| <i>Jian-xiao Liu, Ke-qing He, Jian Wang, and Da Ning</i>                            |     |
| Using 3-Way Satisfaction for Web Service Selection: Preliminary Investigation ..... | 731 |
| <i>Erbin Lim, Philippe Thiran, Zakaria Maamar, and Jamal Bentahar</i>               |     |
| Discovering Service Similarity by Testing .....                                     | 733 |
| <i>Joshua Church and Amihai Motro</i>                                               |     |
| A Multi-dimensional Social Tagging Method for Semantic Web Services .....           | 735 |
| <i>Da Ning, Ke-qing He, Rong Peng, and Jian-xiao Liu</i>                            |     |

### Work-in-Progress Track 2: SOA

|                                                                                          |     |
|------------------------------------------------------------------------------------------|-----|
| An Architecture for Managing and Delivering Trustworthy Context-Dependent Services ..... | 737 |
| <i>Naseem Ibrahim, Mubarak Mohammad, and Vangalur Alagar</i>                             |     |
| On-Demand Service-Oriented Architecture and Standardization .....                        | 739 |
