INTERNATIONAL SOCIETY FOR COMPUTERS AND THEIR APPLICATIONS

Seventh International Conference on Parallel and Distributed Computing Systems

October 6-8, 1994 Las Vegas, Nevada USA

TECHNICAL PAPER INDEX

Session I: Parallel Processing

1. ***Performing Abstract Interpretation in Parallel***
   L-L. Chen and W. Harrison III (University of Illinois at Urbana-Champaign) 1
2. ***Improving Performance of Direct-Mapped Caches for Symbolic Applications in Micro-Parallel Processors***
   C-L. Su, C-C. Teng and A. Despain (University of Southern California) 8
3. ***Architectural Scaling and Analytical Performance Prediction***
   M. Clement and M. Quinn (Oregon State University) 16
4. ***Partitioning the Recirculating Shuffle-Exchange Network***
   J-D. Lee and K. Batcher (Kent State University) 22

Session 2: Parallel Databases I

1. ***Parallelization by the Divide-and-Conquer Method in Database Systems***
   Q. Yang (University of Illinois at Chicago), C. Liu (Depaul University) and W. Meng (SUNY at Binghamton) 28
2. ***A Parallel Execution Model for Updating Temporal Databases***
   A. Gal and O. Etzion (Technion Israel Institute of Technology) 34
3. ***Performance Analysis of the Relational Project Operation for Parallel Database Systems***
   E. Schikuta and P. Kirkovits (University of Vienna) 40
4. ***Exploiting Shared-Memory Parallel Computers to Parallelize Main Memory Databases***
   P. Manzoni and S. Reghizzi (Politecnico di Milano) 46

Session 3: Applications

1. ***A Formal Framework Supporting the Merger of Tasks***
   A. Mitschele-Thiel (Univ. Erlangen-Nürnberg) 52
2. ***Ensuring Process Persistence: Specification, Implementation and Performability Measure***
   N. Budhiraja and P. M. Gopal (IBM T. J. Watson Research Center) 57
3. ***Implementing Lock-Free Queues***
   J. Valois (Rensselaer Polytechnic Institute) 64
4. ***Security and Privacy for Partial Order Time***
   S. Smith and J. Tygar (Carnegie Mellon University) 70

Session 4: Distributed Computing and Systems

1. **A Simple Graph Algorithm for Message-optimized Distributed Computing**
   D. Kadamuddi and J. Tsai (University of Illinois at Chicago) 80
2. **On the Design and the Proof of Correctness of a Distributed Hardware Barrier Synchronization Protocol**
   M. Buddhikot, R. Jenevein and B. Womack (University of Texas at Austin) 86
3. **A Distributed Execution Replay Facility for CHORUS**
   F. Ruget (Chorus Systèmes) 93
4. **Distributing Reactive Systems**
   P. Caspi (VERIMAG), A. Girault (Merlin Gerin) and D. Pilaud (VERILOG) 101

Session 5: Task Scheduling I

1. **An Experimental Evaluation of Task Scheduling on Reconfigurable Multicomputer Architectures**
   W. A. Woods, H. D. Moser, O. Frieder (George Mason University) and P. Kantor (Rutgers University) 108
2. **Combining Self-Scheduling and Data-Distribution Schemes for Parallel Computations**
   V. Saletore (Oregon State University) and J. Liu (Western Oregon State College) 118
3. **Incorporating Job Scheduling for Processor Allocation on Two-Dimensional Mesh-Connected Systems**
   Y-K. Chu, I-L. Yen and D. Rover (Michigan State University) 124

Session 6: Mesh Topology

1. **Election on Square Meshes with Link Failures**
   B. Yi (Georgia Institute of Technology) and G. Peterson (Spelman College) 130
2. **Multicast Trees to Provide Message Ordering in Mesh Networks**
   J. Córdova (University of Puerto Rico at Arecibo) and Y-H. Lee (University of Florida) 140
3. **Solving the Shortest-Paths Problem on Bipartite Permutation Graphs Efficiently**
   L. Chen (Fundamental Research Laboratory) 146

Session 7: Parallel Programming

1. **Logic Based and Imperative Coordination Languages**
   A. Forst, E. Kühn, H. Pohlai and K. Schwarz (University of Technology Vienna) 152
2. **Geometric Techniques for Parallelizing and Scheduling Do-Loops**
   D. Tang and G. Gupta (New Mexico State University) 160
3. **Handling a Serial Number Field on Hot Spot**
   J. Lee (Queensland University of Technology) 168

Session 8: Hypercube I

1. **Optimal Hypercube Algorithms for Triangulating Classes of Polygons and Related Problems**
   D. Z. Chen (University of Notre Dame) 174
2. **A Restricted Subcube Management Scheme for Hypercube Multicomputers**
   Y-L. Chen and J-C. Liu (Texas A&M University) 180

3. **Identifying Maximal Incomplete Subcubes in Faulty Hypercubes**
N-F. Tzeng and G. Lin (University of Southwestern Louisiana) 186

Session 9: Interconnection Networks

1. **Performance Prediction of Communication Protocols Using Deterministic Analysis**
R. E. Miller and Z. U. Choudhry (University of Maryland) 194

2. **Optimal Communication Algorithms for Manhattan Street Networks**
E. Varvarigos (University of California - Santa Barbara) 200

3. **How Much Adaptivity is Required for Bursty Traffic?**
L. Cherkasova (Hewlett-Packard Laboratories), A. Davis (University of Utah), V. Kotov, I. Robinson and T. Rokicki (Hewlett-Packard Laboratories) 208

4. **Prioritized Conflict Resolution on a Multiple Access Broadcast Channel Using Control Mini-Slots**
W. Moh, Y-J. Chien (San Jose State University), T-S. Moh (Silicon Valley Research, Inc.) and C. Martel (University of California - Davis) 214

Session 10: Task Scheduling II

1. **The Effect of Operating System Scheduling on High Performance Message Passing Systems**
R. Mraz (IBM T. J. Watson Research Center) 222

2. **A Brief Examination of Distributed Scheduling Support in the Presence of Autonomy**
S. Chapin (Kent State University) 225

3. **Task Relocation for Two-Dimensional Meshes**
H. Youn, S-M. Yoo and B. Shirazi (The University of Texas at Arlington) 230

4. **A Split Graph Based Heuristic for Task Allocation in Distributed Systems**
H. Ali, H. El-Rewini, and Y. Huang (University of Nebraska at Omaha) 236

Session 11: Parallel Architectures

1. **Shared-Resource Multistreaming Processor Architecture and Performance Analysis**
T. Killeen and M. Celenk (Ohio University) 243

2. **The Impact of Program Structure on the Performance of Scheduling Policies in Multiprocessor Systems**
S-L. Au and S. Dandamudi (Carleton University) 249

3. **Comparison of Arbitration Policies for Cascaded Crossbar Interconnected Multiprocessors**
C. Évéquoz (École Polytechnique de Montréal) 259

4. **Parallel Discrete Event Simulation on Multiprocessors**
R. Neogi (Motorola, Inc.) and M. Wagh (Lehigh University) 268

Session 12: Parallel and Distributed GIS

1. **Distributed Geographical Databases: Some Specific Problems and Solutions**
R. Laurini, F. Milleret-Raffort (Université Claude Bernard Lyon I) 276

2. **Effective Parallel Programming for Spatial Analysis: An Experience Using a Network Based Approach**
G. Brunetti (Interaktive Sys.), A. Clematis, B. Falcidieno, A. Sanguineti, M. Spagnuolo (National Research Council) 284

3. **Distributing Computations Among GIS Servers**
M. Gennert, N. Hachem, N. Serrao, A. Bansal (Worcester Polytechnic Institute) 294

4. **Load Balancing for Neural-Network Classification of Remote Sensing Data in an Heterogeneous Network of Workstations**
J. Favela, J. Torres, H. Hidalgo, R. Granillo (CICESE Research Center) 302

Poster Session

1. **An Abstract Model of the Parallel Virtual Machine (PVM)**
E. Borger (Università di Pisa) and U. Glässer (Universität-GH Paderborn) 308

2. **Authenticated Communication without Relying on Authorities**
N. Fujinami (Sony Computer Science Laboratory, Inc.) 310

3. **Design of a SliM Image Processor for a SIMD Parallel Architecture**
M. H. Sunwoo, B. Ahn, S. Ong (Ajou University) and S. Lee (Postech) 312

4. **Entice - A Cell Characterization System Using Parallel Computing**
M. G. Wloka, B. George, S. Tyler (Motorola, Inc.) 314

5. **Distributed Contract-Based Negotiation using Formal Specifications**
R. Gamble and S. Sen (University of Tulsa) 316

6. **An Architecture for Homogenizing Federated Databases**
K. Karlapalem, Q. Li and C-D. Shum (University of Science and Technology) 318

7. **A Parallel Scheduler for a Shared Memory (Tightly-Coupled) Multiprocessor System**
G. Sharma (Amdahl Corporation) and B. Gupta (Southern Illinois University) 320

8. **Optimisation Methods for Risc Machines "In Pursuit of Lost Time"**
P. Taillebois (Université de Paris XI) and B. Khaldi (SUPELEC) 322

9. **Deadlock-Free Adaptive Routing in Dual-channel Hypercube**
Q. Li and J-C. Liu (Santa Clara University) 324

10. **Evaluation of Load Sharing Strategies in Soft Real-Time Systems**
A. Budihardjo (STF Technologies, Inc.) and V. L. Wallace (University of Kansas) 326

11. **Load Balancing Analysis for Farming Transputer Implementations: A Case Study**
I. Dancea (Université du Québec à Hull) 328

Session 13: Parallel Algorithms I

1. **On the Performance Prediction of Parallel Algorithms**
K. Lalgudi, D. Bhattacharya (Yale University) and P. Agrawal (AT&T Bell Laboratories) 330

2. **On Parallel Divide-and-Conquer**
L. Acker (IBM Corporation), R. Browning and D. Miranker (University of Texas) 336

3. **Performance of Parallel Synchronous Branch-and-Bound for 0-1 Integer Programming on Two Parallel Systems**
R. Wiegers (Delft University of Technology) 344

4. **Parallel Implementation of Sparse Simplex Algorithms**
W. Shu (SUNY at Buffalo) 350

5. **Some Complexity Results for Rings of Petri Nets**
H-C. Yen, B-Y. Wang, M-S. Yang (National Taiwan University) 354

Session 14: Hypercube II

1. **Task Migration in Hypercubes Using all Disjoint Paths**
   H-L. Chen (National Taiwan Institute of Technology), and N-F. Tzeng (University of Southwestern Louisiana) 358

2. **Parallel and Pipelined Parallel Consecutive Sums on a Hypercube with Application to Ray Casting**
   J. Song and R. Shu (National University of Singapore) 364

Session 15: Parallel Architectures

1. **A New Approach to Network Latency Reduction of Multiprocessors by Data Migration in the Absence of Cache Coherence Mechanism**
   S. Ray, H. Jiang (University of Nebraska - Lincoln) and Q. Yang (University of Rhode Island) 370

2. **Time Cost Analysis of Back-Propagation ANNs over a Transputer Network**
   R. Tan and V. Narasimhan (The University of Queensland) 376

3. **Evaluating Cache Performance for Vector Processing**
   T. Sun and Q. Yang (University of Rhode Island) 382

4. **Design Methodology for a Parallel Event-Driven Circuit Simulator**
   A. Kamal, H. Soliman, W. Bradley and A. Elmaghraby (University of Louisville) 388

5. **Median-Based Normalizer on a CM-200**
   W. Bernecky and J. Muñoz (Naval Undersea Warfare Center Detachment) 392

Session 16: Distributed Databases: Cooperative Environments & Techniques

1. **Middleware Support for Heterogeneous Distributed Information**
   M. Papazoglou, A. Delis (Queensland University of Technology), and B. Krämer (Fern Universität Hagen) 396

2. **Active Database Rules in Distributed Database Systems: A Dynamic Approach to Solving Structural and Semantic Conflicts in Distributed Database Systems**
   N. Pissinou and K. Vanapipat (University of Southwestern Louisiana) 404

3. **Information Repository for Supporting Distributed Information Management Systems**
   J. Hong and M. Bauer (University of Western Ontario) 411

4. **Localized Decision Making and the Value of Information in Decentralized Control**
   E. Billard (University of Aizu) and J. Pasquale (University of California San Deigo) 417

Session 17: Interconnection Networks

1. **Effectiveness of Message Strip-Mining for Regular and Irregular Communication**
   A. Wakatani (Matsushita Electrical Industrial) and M. Wolfe (Oregon Graduate Institute) 426

2. **Analysis of a Serial Link Interconnection Network Architecture**
   H. Sharif and B. Hickman (University of Nebraska) 434

3. **Feasible Flows in a Recursive Class of Interconnection Networks**
   E. Elmallah (University of Alberta) 438

Session 18: Parallel Algorithms II

1. **On the Multicast Routing in Bit-Serial Sorting Networks**
   M. Al-Hajery and K. Batcher (Kent State University) 446
2. **On the Bisection Width of the Transposition Network**
   K. Kalpakis and Y. Yesha (University of Maryland Baltimore County) 454
3. **On the Synchronization-Computation and Dependence-Architecture Trade-offs of Asynchronous Parallel Iterative Algorithms**
   L. Lin (National Yunlin Institute of Technology) 460

Session 19: Parallel Databases II

1. **Scheduling and Parallelism for Extended SQL Query Optimization**
   A. Hameurlain, F. Morvan (Université Paul Sabatier) 466
2. **ASPECT - Specifying Consistency Requirements for Replicated Data**
   R. Lenz, T. Kirsche (University of Erlangen-Nuremberg) and B. Reinwald (IBM Almaden Research Center) 472
3. **Parallel Off-Line Consistency Constraint Checking**
   D. Gadbois and D. Miranker (The University of Texas at Austin) 478

Session 20: Fault Tolerance and Recovery

1. **TBFT: A Task-Based Fault Tolerance Scheme for Distributed Systems**
   S. Yajnik, S. Srinivasan, N. Jha (Princeton University) 483
2. **Distributed Algorithms for the Reconfiguration of Fault-Tolerant Multicomputers**
   R. Libeskind-Hadas (Harvey Mudd College) 490
3. **Domino-Effect Free Checkpointing Recovery in Distributed Systems**
   T. Park and J. Kim (Texas A&M University) 497

Session 21: Reliability and Recovery

1. **Improvement of Reliability in Hypercubes Using a Fast Reconfiguration Algorithm**
   D. Avresky and K. Al-Tawil (Texas A&M University) 503
2. **A Heuristic File Assignment Algorithm to Maximize Reliability in a Distributed Computing System**
   D-J. Chen, R-S. Chen and W. Hol (National Chiao Tung University) 509
3. **Distributed Computing with a Spreadsheet**
   W. Korthage (Polytechnic University) 515
4. **A Checkpointing Scheme for Multiprocessors with Superscalar Processors**
   M. Yousif (Louisiana Tech University) 519

Session 22: Distributed Algorithms/Mutual Exclusion

1. **An Efficient Fault-Tolerant Mutual Exclusion Algorithm for Distributed Systems**
   D. Manivannan and M. Singhal (The Ohio State University) 525
2. **Efficient Deadlock Detection in Distributed Systems**
   S. Chen, Y. Deng, C. Orji and W. Sun (Florida International University) 531

3. **Fault-Tolerant Distributed Mutual Exclusion**
M. Neilsen (Oklahoma State University) 539

4. **A Phase-Based Mutual Exclusion Algorithm for Computer Networks**
R. Baldoni (IRISA) and B. Ciciani (Università di Romma "La Sapienza") 543

5. **Coping with Different Retrieval Methods in Next Generation Networks**
D. Flater and Y. Yesha (University of Maryland Baltimore County and NIST) 549

Session 23: Parallel Languages

1. **Efficient Allocation of Program Modules on Multicomputers**
H. Barada and N. Adar (Lehigh University) 556

2. **How Many Times Should a Loop Be Unrolled?**
H. El-Rewini and H. Ali (University of Nebraska at Omaha) 561

3. **Comparing CM Fortran and Message-Passing Fortran Programming Modes on the CM-5**
R. Ganesan, K. Govindarajan, W. Shu, M-Y. Wu (State University of New York) 567

Session 24: Networks

1. **High Order Head-of-Line Blocking in Multistage Interconnection Networks**
M. Jurczyk and T. Schwederski (Institute for Microelectronics Stuttgart) 571

2. **Scalable Interconnection Networks Based on the Petersen Graph**
S. Öhring and S. Das (University of North Texas) and D. Hohndel (AIB Software Corporation) 581

3. **Broadcasting Trees in Hamming Cubes**
S. Das and A. Mao (University of North Texas) 587

4. **Optimal Asynchronous Agreement Algorithm for Complete Networks with Byzantine Links**
H. Sayeed, M. Abu-Amara, and H. Abu-Amara (Texas A&M University) 593

Session 25: Routing

1. **Improving the Performance of Lee's Maze Routing Algorithm on Parallel Computers**
Y-Y. Fang, I-L. Yen (Michigan State University) and R. Dubash, F. B. Bastani (University of Houston) 597

2. **Improving Internet Routing Information Protocol**
T. Wang and W. Peng (Southwest Texas State University) 603

3. **Performance of Multicast Wormhole Routine Algorithms in Fault-Tolerant 2D Meshes**
F. Sibai (The University of Akron) and S. Kulkarni (Voicetel Enterprises) 610

4. **Efficient Algorithms for Non-blocking Wormhole Routing and Circuit Switching on Linear Array Multiprocessors**
H. Jiang, J. Leung, P. Luo, S. Shende (University of Nebraska) 614

Session 26: Neural Networks/VLSI Based Architectures

1. **ANN Processing on SIMD Hypercubes**
Q. Malluhi, M. Bayoumi, T. Rao (University of Southwestern Louisiana) 620

2. **VLSI Residue Systolic Implementations for Artificial Neural Networks**
C. Zhang, M. Wang (University of Regina) and C. Tseng (National Chiao-Tung University) 628

3. **A Scaleable Architecture for a Distributed ATM Switch**
P. Shipley, D. Seidel and M. Bayoumi (University of Southwestern Louisiana) 634

4. **Data Mapping for Parallel Programs with Changing Size Windows**
T. Li, S. Klasa and Y. Tang (Concordia University) 640

Session 27: Performance Evaluation and Modeling

1. **Performance-Based Quality Measures for Parallel Structures Design**
R. Todd, R. Ammar and H. Sholl (University of Connecticut) 644

2. **Modeling and Design Considerations for Handling Inter-Processor Interrupts**
S-H. Yoon, S-M. Moh (Electrical & Telecommunications Research Institute) and D-J. Kim (Korea University) 651

3. **Architectural Design of Distributed Performance Monitoring Systems: A Hierarchical Approach**
J. Cao (University of Adelaide) and O. de Vel, L. Shi (James Cook University) 658

4. **A Genetic Algorithm Approach for Performance Based Reliability Enhancement of Distributed Systems**
S. Ahuja (SUNY at Oneonta) and A. Kumar (University of Louisville) 664

5. **The Multigraph Modeling Tool**
C. Childers, A. Apon (Vanderbilt University), W. Hooper (Belmont University), K. Gordon, L. Dowdy (Vanderbilt University) 670

Session 28: Heterogeneous and Multidatabase Systems

1. **Concurrency Control in Federated Database Systems: A Performance Study**
J. Huang (Honeywell Technology Center), S-Y. Hwang (Industrial Technology Research Institute) and J. Srivastava (University of Minnesota) 676

2. **Addressing Shared Access and Communication in Distributed Databases Using an Object Environment**
S. Damodaran-Kamal and N. Pissinou (University of Southwestern Louisiana) 686

3. **Atomic Accesses to a Single Replicated File in Distributed Systems**
X. Jia (University of Queensland) and K. Shimizu, M. Maekawa (University of Electro-Communications) 693

4. **Atomic Commitment in Multidatabase Systems**
H-D. Yoo and M. Kim (Korea Advanced Institute of Science & Technology) 700

Session 29: Parallel Architectures

1. **An Optimal Mapping Algorithm for HIN-Based Multiprocessors**
L. Samaratunga, R. Srinivasan, V. Chaudhary and S. Mahmud (Wayne State University) 706

2. **A Data Parallel Dynamics Toolkit for the Bioblock Modeling System**
E. Cosillo and M. Wainer (Southern Illinois University at Carbondale) 712

Session 30: Real-Time and Distributed Systems

1. **A Nodal Processing Model for Distributed Real-Time Performance Estimation**
J. Moriarty, H. Sholl and J. Chen (University of Connecticut) 716

2. **Recursive Network Topologies for Distributed Systems**
W-J. Hsu (Nanyang Technological University) and M. Chung (Michigan State University) 723

3. **A Priority Ordering-Based Protocol for Concurrency Control in Distributed Real-Time Database Systems**
J. Kim and H. Shin (Seoul National University) 729

Session 31: Visualization Tools, Languages and Techniques

1. **A Visualization Tool for Display and Interpretation of SISAL Programs**
   H-B. Chen, B. Shirazi, J. Yeh, H. Youn and S. Thrane (The University of Texas at Arlington) 734
2. **Performance Visualisation of Message Passing Programs Using Relational Approach**
   S. Lei and K. Zhang (Macquarie University) 740
3. **Visual Occam with Petri Net Semantics**
   M. Al-Mulhem and S. Ali (KFUPM) 746

Session 32: Interconnection Networks

1. **Multitriangle: A New Interconnection Network**
   H. Qian and J. Wu (Florida Atlantic University) 755
2. **Locating Switching Faults in General Synchronous Fiber-Optic Networks**
   M. Abu-Amara and H. Abu-Amara (Texas A&M University) 761
3. **A New Generalized Star Graph Network: Com-Star**
   B. Cong (South Dakota State University) 767

Session 33: Distributed Systems and Load Balancing

1. **Load Distribution Using Name Sharing for Locally Distributed Systems**
   J. Fausey (Online Computer Library Center) and S. Chung (Wright State University) 771
2. **Spectral Analysis of Instability in Decentralized Load Balancing**
   E. Billard and A. Riedmiller (University of Aizu) 777
3. **Partitioning Graphs into Hamiltonian Ones**
   L. Chen (Fundamental Research Laboratory) 783
4. **On Unboundedness in Reduced Reachability Analysis**
   H. Mountassir (Laboratoire d'Informatique) 787

Session 34: Memory Systems

1. **Coherency Protocol and Algorithm of The DICE Distributed Shared Memory**
   C-J. Jou, H. AlKhatib, Q. Li and A. Chen (Santa Clara University) 796
2. **Modelling Accesses to Stationary Data in a Shared Memory Multiprocessor**
   M. Brorsson and P. Stenstrom (Lund University) 802
3. **Bandwidth Analysis of Multistage Interconnection Networks for General Memory Reference Model**
   S-M. Yuan and H-K. Chang (National Chiao Tung University) 808
4. **Solving Block Bidiagonal Systems on Distributed Memory Computers**
   P. Amodio and T. Politi (Università di Bari) and M. Paprzycki (University of Texas of the Permian Basin) 812

Session 35: Parallel Programming Languages, Compilers, and Packages

1. **The Arc Consistency Problem: A Cast Study in Parallell Programming with Shared Objects**
   I. Athanasiu (Polytechnical Institute of Bucharest) and H. Bal (Vrije Universiteit) 816
2. **A Distributed System of Constraint Logic Programming Interpreters**
   W. Day and W. Carlisle (Auburn University) 822

3. **A New Approach to Implement Mutual Control in Ada**
H-C. Chu and B-H. Yuan (National Defense Management College) 827

4. **Solving Nonlinear Systems on a Vector Supercomputer**
C. Hu, J. Sheldon (University of Houston-DT), B. Kearfott (University of SW Louisiana), and Q. Yang (University of Rhode Island) 832

Session 36: Parallel Algorithms and Scheduling

1. **New Algorithms for Matrix Operations with Applications to a Reconfigurable Parallel Architecture**
Y-D. Lyuu and E. Schenfeld (NEC Research Institute) 836

2. **Transitive Closure and Related Algorithms on a Modified PARBS Architecture**
R. Grove (Indiana University Southeast) and J. Graham (University of Louisville) 842

3. **Scalability of a Parallel Hashing Algorithm on a SIMD Architecture**
Z. Khan (Bloomsburg University) and E. Kwatny (Temple University) 846

4. **Microprocesses: An Implementation of Threads Based on Kernel/User Cooperation**
S. Ōkasaka, K. Shimizu and H. Ashihara (The University of Electro-Communications) 850

5. **Processor Scheduling in Virtual Computer Systems**
B. Ozden, A. Goldberg and A. Silberschatz (AT&T Bell Laboratories) 856

6. **New Dynamic Paritioning Strategy for Hypercube Computers**
A. Bellaachia (The University of Qatar) and A. Youssef (The George Washington University) 863
