**Table of Contents**

<b>Preface: Powders and Grains 2013</b> Aibing Yu	1
<b>INVITED PAPERS</b>	
<b>From nanoscale cohesion to macroscale entanglement: Opportunities for designing granular aggregate behavior by tailoring grain shape and interactions</b> Heinrich M. Jaeger, Marc Z. Miskin, and Scott R. Waitukaitis	3
<b>From customized multiscale modeling to general mesoscience – <i>The principle of compromise</i></b> Jinghai Li	7
<b>Jamming and shear for granular materials</b> R. P. Behringer, Joshua Dijksman, Jie Ren, Jie Zhang, Trushant Majmudar, Bulbul Chakraborty, Daipeng Bi, and Antoinette Tordesillas	12
<b>Establishing predictive capabilities of DEM – Verification and validation for complex granular processes</b> Jin Y. Ooi	20
<b>The glass and jamming transitions in dense granular matter</b> Corentin Coulais, Raphaël Candelier, and Olivier Dauchot	25
<b>Granular friction in a wide range of shear rates</b> Osamu Kuwano, Ryosuke Ando, and Takahiro Hatano	32
<b>10,000 – A reason to study granular heat convection</b> I. Einav, P. Rognon, Y. Gan, T. Miller, and D. Griffani	38
<b>Quasistatic behaviour of granular materials: Some things we learned from DEM studies</b> Jean-Noël Roux	46
<b>Rheometry of dense granular materials: The crucial effects of gravity and confining walls</b> V. Shravan Kumar, Tejas Murthy, and Prabhu R. Nott	49
<b>Stress- and rate-controlled granular rheology</b> Yimin Jiang and Mario Liu	52
<b>Identifying and following particle-to-particle contacts in real granular media: An experimental challenge</b> Gioacchino Viggiani, Edward Andò, Clara Jaquet, and Hugues Talbot	60

<b>A hierarchy of particle-size segregation models: From polydisperse mixtures to depth-averaged theories</b>	66
J. M.N.T. Gray	
<b>1. CONTEMPORARY ISSUES</b>	
<b>1.1. Nano, Micro, and Irregular Particles</b>	
<b>Shear alignment and orientational order of macroscopic rodlike grains</b>	74
R. Stannarius, S. Wegner, B. Szabó, and T. Börzsönyi	
<b>Stability determination of steric-stabilized nanoparticles – Numerical and experimental analysis</b>	78
Olakunle Olatunji and Jürgen Tomas	
<b>Multidimensionality in fluidized nanopowder agglomerates</b>	82
Lilian de Martín, Wim G. Bouwman, and J. Ruud van Ommen	
<b>Shear-induced failure in jammed nanoparticle assemblies</b>	86
Ishan Srivastava, Kyle C. Smith, and Timothy S. Fisher	
<b>Tribo-electric charging particle in a shaker</b>	90
Masayuki Imba, Toshiko Kanazawa, Junichi Ida, Hideo Yamamoto, Mojtaba Ghadiri, and Tatsuhsi Matsuyama	
<b>Experimental and theoretical study of a micro-fluidized bed</b>	93
V. Zivkovic, M. N. Kashani, and M. J. Biggs	
<b>Two-phase nc-TiN/a-(C,CN<sub>x</sub>) nanocomposite films: A HRTEM and MC simulation study</b>	97
J. Guo, Y. H. Lu, X. J. Hu, and Y. G. Shen	
<b>A DEM model for contact electrification of irregular shaped particles</b>	101
Chunlei Pei, Chuan-Yu Wu, Michael Adams, David England, Stephen Byard, and Harald Berchtold	
<b>Axial segregation of horizontally vibrated binary granular mixtures in an offset-Christmas tree channel</b>	105
Ashish Bhateja, Ishan Sharma, and Jayant K. Singh	
<b>Diffusion of light in two-dimensional granular materials</b>	109
Zeinab Sadjadi and MirFaez Miri	
<b>Synergistic combination dry powders for inhaled antimicrobial therapy</b>	113
Desmond Heng, Sie Huey Lee, Jeanette Teo, Wai Kiong Ng, Hak-Kim Chan, and Reginald B. H. Tan	
<b>Electrostatics effects in granular materials</b>	117
Saurabh Sarkar and Bodhisattwa Chaudhuri	

<b>The characterizations and electrochemical properties of lignosulfonate templates based mesoporous NiO</b>	121
Feng Chen, Hongfei Yao, Ping Fan, Jintao Yang, and Mingqiang Zhong	
<b>Influence of sintering additives and TiC on properties of TiC/Si<sub>3</sub>N<sub>4</sub> ceramics</b>	125
Yong Jiang, Laner Wu, and Wenzhou Sun	
<b>Fabrication and characterisation of patterned magnetorheological elastomers</b>	129
Weihua Li, Xianzhou Zhang, Tongfei Tian, and Weijia Wen	
<b>Study of shear-stiffened elastomers</b>	133
Tongfei Tian, Weihua Li, Jie Ding, Gursel Alici, and Haiping Du	
<b>Preparation of <math>\gamma</math>-AlON transparent ceramics by one-step method with high-activity Al<sub>2</sub>O<sub>3</sub> powders</b>	137
Wenzhou Sun, Yuhong Chen, Laner Wu, and Yong Jiang	
<b>Agglomerating fluidization of nanoparticles in the vibration or magnetic field</b>	141
Tao Zhou, Hao Duan, Hui Wang, Feng Zhang, Hiroyuki Kage, and Yoshihide Mawatari	
<b>1.2. Modelling and Simulation Techniques</b>	
<b>Understanding multi-scale structural evolution in granular systems through gMEMS</b>	145
David M. Walker and Antoinette Tordesillas	
<b>Event-driven DEM of soft spheres</b>	149
Thorsten Pöschel and Patric Müller	
<b>Multi-scale simulation of discrete systems with multi-scale supercomputer</b>	153
Wei Ge and Jinghai Li	
<b>Scaling laws in granular flow and pedestrian flow</b>	157
Shumiao Chen, Fernando Alonso-Marroquin, Jonathan Busch, Raúl Cruz Hidalgo, Charmila Sathianandan, Álvaro Ramírez-Gómez, and Peter Mora	
<b>Multiscale modelling of pharmaceutical powders: Macroscopic behaviour prediction</b>	161
Jonathan Loh, William Ketterhagen, and James Elliott	
<b>A parallel version of the contact dynamics method</b>	165
Z. Shojaaee, M. R. Shaebani, L. Brendel, J. Török, and D. E. Wolf	
<b>On the use of graphics processing units (GPUs) for molecular dynamics simulation of spherical particles</b>	169
R. C. Hidalgo, T. Kanzaki, F. Alonso-Marroquin, and S. Luding	
<b>A nonlinear dynamical systems modelling approach unveils chaotic dynamics in simulations of large strain behaviour of a granular material under biaxial compression</b>	173
Michael Small, David Walker, and Antoinette Tordesillas	

<b>Particle-based simulation of hydraulic fracture and fluid/heat flow in geothermal reservoirs</b> Peter Mora, Yucang Wang, and Fernando Alonso-Marroquin	177
<b>Uncertainty quantification and granular thermodynamics</b> Jeffrey D. Picka	181
<b>DEM simulation of particles of complex shapes using the multisphere method: Application for additive manufacturing</b> Eric J. R. Parteli	185
<b>Numerical simulation of suffusion phenomena through granular media</b> Francesco Federico, Andrea Montanaro, and Mauro Scienza	189
<b>2. GEOMATERIALS AND CONSTRUCTIONS:</b>	
<b>2.1. Theoretical</b>	
<b>Directional plastic flow and fabric dependencies in granular materials</b> Barthélémy Harthong and Richard G. Wan	193
<b>Granular mechanics of the critical state of coarse soils</b> Calixtro Yanqui	197
<b>The influence of void ratio on small strain shear modulus of granular materials: A micromechanical perspective</b> Xiaomin Xu, Yipik Cheng, and Dongsheng Ling	201
<b>Mesh size effect in the simulation of powder geo-material</b> L. C Huang, C. Y. Zhou, Y. Cheng, and W. K. Li	205
<b>Simulation on particle crushing of tailings material under high pressure</b> Hai-ming Liu, Yi-ming Liu, Chun-he Yang, and Jing Cao	209
<b>Distinct element analyses of collapsible behaviour of structured loess under one-dimensional compression</b> M. J. Jiang, T. Li, and H. J. Hu	213
<b>Numerical simulation of rock failure process using improved rigid body spring method</b> Chi Yao, Qinghui Jiang, Jianfu Shao, and Chuangbing Zhou	217
<b>2.2. Numerical</b>	
<b>Dynamic and impact contact mechanics of geologic materials: Grain-scale experiments and modeling</b> David M. Cole, Mark A. Hopkins, and Stephen A. Ketcham	221
<b>DEM modeling of penetration test in static and dynamic conditions</b> Quoc Anh Tran, Bastien Chevalier, and Pierre Breul	225

<b>A new definition on critical state of granular media accounting for fabric anisotropy</b> Jidong Zhao and Ning Guo	229
<b>Wave propagation in assemblies of cemented spheres</b> T. Matthew Evans and Zhangwei Ning	233
<b>Distinct element analyses of inclined cone penetration test in granular ground</b> Mingjing Jiang, Yongsheng Dai, Zhifu Shen, and Ning Zhang	237
<b>Penetration strength of coarse granular materials from DEM simulations</b> Juan Carlos Quezada, Gilles Saussine, Pierre Breul, and Farhang Radjai	241
<b>Modelling desiccation cracking in thin clay layer using three-dimensional discrete element method</b> Jun Sima, Mingjing Jiang, and Chuangbing Zhou	245
<b>Effects of granular soil micro-mechanics on the pressure-sinkage relationship</b> Liang Cui and Savvas Avramidis	249
<b>Characterizing inclined loading capacity of a pile embedded in methane-hydrate-bearing marine sediments</b> Fang Liu, Mingjing Jiang, Fangyuan Zhu, and Yu Xiao	253
<b>On the physical meaning of equivalent skeleton void ratio for granular soil with fines</b> Bei-Bing Dai and Jun Yang	257
<b>PFC2D simulation of thermally induced cracks in concrete specimens</b> Xinghong Liu, Xiaolin Chang, Wei Zhou, and Shuirong Li	261
<b>Micro-characteristics of monodisperse and best-packing mixture samples under one dimensional compression</b> N. H. Minh and Y. P. Cheng	265
<b>Mechanical behavior modeling of sand-rubber chips mixtures using discrete element method (DEM)</b> Danial Rezaazadeh Eidgahee and Ehsan Seyedi Hosseininia	269
<b>Strength and fabric evolution of unsaturated granular materials by 3D DEM analyses</b> Mingjing Jiang and Zhifu Shen	273
<b>Challenges of simulating undrained tests using the constant volume method in DEM</b> Kevin J. Hanley, Xin Huang, Catherine O'Sullivan, and Fiona Kwok	277
<b>Effect of inter-particle rolling resistance on passive earth pressure against a translating rigid retaining wall</b> Mingjing Jiang, Jie He, Fang Liu, and Huaning Wang	281

<b>Feasible use of particle-flow virtual test for the mechanical properties mixed soil</b> Zhang Jia-ming, Ren Yong-qiang, Shao Xiao-quan, and Wang Gang	285
---	-----

### 2.3. Experimental

<b>Multi-phase mechanics and multi-scale interactions among soil-water-gas in tsunami disaster</b> Tatsuya Imase, Kenichi Maeda, Yoshimi Ito, and Mai Goto	289
---	-----

<b>Quantification of time-dependent microstructural change of a silty sand under load</b> M. Yusa and E. T. Bowman	293
---	-----

<b>Postmortem analysis of sand grain crushing from pile interface using X-ray tomography</b> I. Matías Silva, Gaël Combe, Pierre Foray, Frédéric Flin, and Bernard Lesaffre	297
--	-----

<b>Physical and mechanical properties of cement-treated granular soils with respect to geotechnical application</b> Kimitoshi Hayano, Phan Huy Dong, and Yoshiyuki Morikawa	301
--	-----

<b>Optimum mixture design of granular materials reinforced by short fiber</b> Shigeaki Nozoe, Kenji Kaneko, and Yutaka Hashizume	305
---	-----

<b>CPT-based estimation of bearing and deformation indexes for TJ-1 lunar soil simulant ground</b> Mingjing Jiang, Ning Zhang, Zhifu Shen, and Xiaofeng Wu	309
---	-----

<b>DEM simulation of footpads quasi-statically penetrating into granular ground</b> Chao Sun, Fang Liu, Mingjing Jiang, and Huaning Wang	313
---	-----

## 3. GRANULAR SOLIDS

### 3.1. Packing, Jamming and Related Properties

<b>Dynamical systems model and discrete element simulations of a tapped granular column</b> A. D. Rosato, D. Blackmore, X. M. Tricoche, K. Urban, and L. Zuo	317
---	-----

<b>Confined packings of frictionless spheres and polyhedra</b> Jean-François Camenen, Yannick Descantes, and Patrick Richard	321
---	-----

<b>Microstructural characteristics of planar granular solids</b> Takashi Matsushima and Raphael Blumenfeld	325
---	-----

<b>Statistical mechanics of dry granular materials: Between fragile solid (jamming) and dry fluid (rheology)</b> Nicolas Rivier and Jean-Yves Fortin	329
---	-----

<b>Settlement statistics of a granular layer composed of polyhedral particles</b> Juan Carlos Quezada, Gilles Saussine, Pierre Breul, and Farhang Radjai	333
---	-----

<b>DEM simulation of experimental dense granular packing</b> Maryam Hanifpour, Nicolas Francois, Mehdi Vaez Allaei, and Mohammad Saadatfar	337
---	-----

<b>The theory of granular packings for coarse soils</b> Calixtro Yanqui	341
<b>Analysis of the behavior of granular materials at a meso-scale</b> Ngoc-Son Nguyen, H�el�ene Magoariec, and Bernard Cambou	345
<b>Minkowski tensors and local structure metrics: Amorphous and crystalline sphere packings</b> G. E. Schr�oder-Turk, R. Schielein, S. C. Kapfer, F. M. Schaller, G. W. Delaney, T. Senden, M. Saadatfar, T. Aste, and K. Mecke	349
<b>Analysis of Voronoi clusters in the packing of uniform spheres</b> C. C. Wang, K. J. Dong, and A. B. Yu	353
<b>Discrete modelling of the packing of ellipsoidal particles</b> Zongyan Zhou, Ruiping Zou, David Pinson, and Aibing Yu	357
<b>The role of inter-grain friction in determining the mechanical and structural properties of superellipsoid packings</b> Gary W. Delaney, James E. Hilton, Paul W. Cleary, and Claire Miller	361
<b>Fast synchrotron X-ray tomography study of the rod packing structures</b> Xiaodan Zhang, Chengjie Xia, Haohua Sun, and Yujie Wang	365
<b>Crystallisation in a granular material</b> N. Francois, M. Saadatfar, M. Hanifpour, R. Cruikshank, and A. Sheppard	369
<b>A method for structural analysis of disordered particle systems</b> Z. A. Tian, K. J. Dong, and A. B. Yu	373
<b>Tomographic analysis of jammed ellipsoid packings</b> Fabian M. Schaller, Max Neudecker, Mohammad Saadatfar, Gary Delaney, Klaus Mecke, Gerd E. Schr�oder-Turk, and Matthias Schr�oter	377
<b>Non-Gaussian behavior in jamming / unjamming transition in dense granular materials</b> A. P. F. Atman, E. Kolb, G. Combe, H. A. Paiva, and G. H. B. Martins	381
<b>Granular jamming transitions for a robotic mechanism</b> Allen Jiang, Tomaso Aste, Prokar Dasgupta, Kaspar Althoefel, and Thrishantha Nanayakkara	385

### 3.2. Forces

<b>Dynamic cone penetration tests in granular media: Determination of the tip's dynamic load-penetration curve</b> E. Escobar, M. Benz, R. Gourv�es, and P. Breul	389
<b>Critical-like features of a granular intruder</b> Benjamin D. Elwood and Leonardo E. Silbert	393

<b>Force-chain identification in quasi-2D granular systems</b> Ling Zhang, Jun-Qi Wu, and Jie Zhang	397
<b>Granular matter: A special buffer for impact load</b> Shunying Ji, Xiaodong Chen, Pengfei Li, and Ying Yan	401
<b>Cushioning effect in highly polydisperse granular media</b> Charles Voivret	405
<b>Experimental evidence and structural mechanics analysis of force chain buckling at the microscale in a 2D polymeric granular layer</b> Andrew B. Croll, Antoinette Tordesillas, David Carey, and Bekele Gurmessa	409
<b>Force distribution/transmission in amorphous and crystalline packings of spheres</b> Xizhong An and Fei Huang	413
<b>A mechanistic analysis of bulk powder caking</b> G. Calvert, N. Curcic, and M. Ghadiri	417
<b>Anisotropy of microstructure and force chains in granular materials</b> Xihua Chu, Lunlun Zhou, and Yuanjie Xu	421
<b>Experimental investigations of micro-structural phenomena inside strain localisation in granular materials</b> Danuta Lesniewska and Magdalena Pietrzak	425
<b>An attempt in assessing contact forces from a kinematic field</b> Vincent Richefeu, Gaël Combe, and Raphaël Maurin	429
<b>Local elastic fields in granular solids</b> J. Boberski, L. Brendel, and D. E. Wolf	433
<b>Cooperative dynamics of a group of intruders subsiding in granular media: A DEM study</b> Cher Hui Goey and Chuan-Yu Wu	437
<b>Non-contact measurement of the stress within granular materials via neutron diffraction</b> C. M. Wensrich, E. H. Kisi, V. Luzin, and O. Kirstein	441
<b>Granular impact dynamics: Fluctuations at short time-scales</b> Abram H. Clark, Lou Kondic, and R. P. Behringer	445
<b>3.3. Shear tests and analysis</b>	
<i>3.3.1. Experimental</i>	
<b>Dilation, compression, and convection in granular shear experiments</b> Nathan Beasley, Jacob Jantzi, Ryan Kinser, and Jeffrey S. Olafsen	449

<b>Experimental evidence of "Granulence"</b> G. Combe, V. Richefeu, G. Viggiani, S. A. Hall, A. Tengattini, and A. P. F. Atman	453
<b>Imaging soft sphere packings in a novel triaxial shear setup</b> Joshua A. Dijksman, Hu Zheng, and Robert P. Behringer	457
<b>TRACKER: A particle image tracking (PIT) technique dedicated to nonsmooth motions involved in granular packings</b> Gaël Combe and Vincent Richefeu	461
<b>Novel experimental apparatus for granular experiments on basal friction</b> Hu Zheng, Joshua A. Dijksman, and Robert P. Behringer	465
<b>Measuring creep and stick-slip behavior in 2-dimensional photoelastic granular medium</b> N. Sepúlveda and R. P. Behringer	469
<b>Experimental investigation of the Rowe's dilatancy law on an atypical granular medium from a municipal solid waste incineration bottom ash</b> Frédéric Becquart and Nor Edine Abriak	471
<b>Experimental studies of precursors to failure in granular material</b> Antoine Le Bouil, Axelle Amon, and Jérôme Crassous	475
<b>Development of a biaxial compression test apparatus for granular materials</b> Lian-Wei Zhang and Jian-Min Zhang	479
<b>The stadium shear device: A novel apparatus for studying dense granular flows</b> Tom Müller, Pierre Rognon, and Itai Einav	483
<i>3.3.2. Numerical</i>	
<b>Prediction of bulk particle breakage due to naturally formed shear bands</b> Colin Hare and Mojtaba Ghadiri	487
<b>Granular shear flows of flexible rod-like particles</b> Y. Guo, J. Curtis, C. Wassgren, W. Ketterhagen, and B. Hancock	491
<b>Study of some micro-structural phenomena in granular shear zones</b> Jan Kozicki, Jacek Tejchman, and Danuta Leśniewska	495
<b>On liquid migration in sheared granular matter</b> R. Mani, D. Kadau, D. Or, and H. J. Herrmann	499
<b>Constitutive relations of jammed frictionless granular materials under oscillatory shear</b> Michio Otsuki and Hisao Hayakawa	503

<b>Minimum cut and shear bands</b> Antoinette Tordesillas, Andrew Cramer, and David M. Walker	507
<b>Shear strength, force distributions and friction mobilization in sheared packings composed of angular particles</b> Emilien Azéma, Nicolas Estrada, and Farhang Radjai	511
<b>Simulation of sheared, caking powder</b> A. Weuster, L. Brendel, and D. E. Wolf	515
<b>Shear strength and microstructure of 3D assemblies of platy particles</b> Mauricio Boton, Emilien Azéma, Nicolas Estrada, Farhang Radjai, and Arcesio Lizcano	519
<b>Evolution of the contact distribution in sheared 2D granular packings</b> Jens Boberski, M. Reza Shaebani, and Dietrich E. Wolf	523
<b>Homogeneity and packing structure of a 2D sheared granular system</b> Jie Ren, Joshua Dijkstra, and Robert P. Behringer	527
<b>Numerical investigation of granular flow in a shear cell</b> X. Wang, H. P. Zhu, A. B. Yu, and S. Luding	531
<b>3.4. Transportation, Propagation and Conduction</b>	
<b>Mass–disorder effects on the frequency filtering in one–dimensional discrete particle systems</b> Brian P. Lawney and Stefan Luding	535
<b>Thermal conduction in particle packs via finite elements</b> Jeremy B. Lechman, Cole Yarrington, William Erikson, and David R. Noble	539
<b>Forming and breaking of contacts in jammed granular media by nonlinear acoustic waves</b> S. Wildenberg, Y. Yang, M. van Hecke, and X. Jia	543
<b>Constrained optimisation in granular network flows: Games with a loaded dice</b> Qun Lin and Antoinette Tordesillas	547
<b>Transport pathways within percolating pore space networks of granular materials</b> Kevin Vo, David M. Walker, and Antoinette Tordesillas	551
<b>Study on small-strain behaviours of methane hydrate sandy sediments using discrete element method</b> Yanxin Yu, Xiaomin Xu, Yi Pik Cheng, and Kenichi Soga	555
<b>Dispersive behavior and acoustic scaling in granular rocks</b> Santos Carlos, Urdaneta Vanessa, Medina Ernesto, and García Xavier	559
<b>Global Markov modelling and analysis of the dynamics of granular deformation and flow</b> Gary Froyland, Antoinette Tordesillas, and David M. Walker	563

<b>Granular acoustics of polyhedral particles</b> Wei Shen Cheng, Jian Chen, and Hans-Georg Matuttis	567
<b>Grain-based characterisation and acoustic wave propagation in a sand packing subject to triaxial compression</b> Mohammad Saadatfar, Nicolas Francois, Alon Arad, Mahyar Madadi, Adrian Sheppard, Tim Senden, and Mark Knackstedt	571
<b>The role of Rayleigh waves in granular solids</b> Alessandro Spadoni and Bart Van Damme	575
<b>Energy transmission through grain-to-grain contacts: The role of bulk and Rayleigh waves</b> Bart Van Damme, Emil Shaykhilislamov, and Alessandro Spadoni	577
<b>Hydraulic and acoustic investigation of sintered glass beads</b> Ibrahim Gueven, Stefan Luding, and Holger Steeb	581
<b>3.5. Compaction</b>	
<b>A multiscale description of failure in granular materials</b> Nejib Hadda, François Nicot, Luc Sibille, Farhang Radjai, Antoinette Tordesillas, and Félix Darve	585
<b>Statistical mechanics description of an isotropic compression and its relationship to micromechanics</b> W. F. Oquendo and J. D. Muñoz	589
<b>Simulation of current-activated pressure-assisted densification</b> Sebastian Angst, Gabi Schierning, and Dietrich E. Wolf	593
<b>Distinguishing and predicting granular failure via multiscale evolution of contact cycle topologies</b> Sebastian Pucilowski, David M. Walker, and Antoinette Tordesillas	597
<b>Force correlations, anisotropy, and friction mobilization in granular assemblies under uniaxial deformation</b> O. I. Imole, M. Wojtkowski, V. Magnanimo, and S. Luding	601
<b>Length scales from elastic buckling of a force chain under confined axial compression</b> Antoinette Tordesillas, David Carey, and Jingyu Shi	605
<b>Modeling of compressible self-organized granular media under static load</b> Mikhail N. Skachkov	609
<b>Effect of fabric on the strength of granular materials in biaxial compression</b> Homayoun Shaverdi, Mohd Raihan Taha, and Farzin Kalantary	613

**4. GRANULAR LIQUIDS**  
**4.1. Unconfined and Surface Flows**  
*4.1.1. Theoretical*

<b>Granular force on objects and correlation length: Drag coefficient enhancement in low Froude number flow regimes</b> Thierry Faug	617
<b>Numerical analysis of impact processes of granular jets</b> Tomohiko G. Sano and Hisao Hayakawa	622
<b>Inclined granular flows on collisional shear layers</b> James T. Jenkins and Diego Berzi	626
<b>An energy-based splash function for the impact of particles with granular beds</b> Chuan-Yu Wu	630
<b>Impaction of particle streams on a granular bed</b> Sida Liu, Zongyan Zhou, Kejun Dong, Aibing Yu, John Tsalapatis, and David Pinson	634
<b>Dissipative discrete element model applied to rock avalanches</b> G. Mollon, V. Richefeu, P. Villard, and D. Daudon	638
<b>Jumps and bores in bulky frictional granular flows</b> Thierry Faug	642
<b>Effect of cohesive force on the formation of a sandpile</b> K. J. Dong, R. P. Zou, K. W. Chu, R. Y. Yang, A. B. Yu, and D. S. Hu	646
<i>4.1.2. Experimental</i>	
<b>Identification of avalanche precursors by acoustic probing in the bulk of tilted granular layers</b> M. Duranteau, V. Tournat, V. Zaitsev, R. Delannay, and P. Richard	650
<b>Study of solids contact shearing and collisions in granular debris flows</b> Gordon G. D. Zhou, Q. C. Sun, and M. L. Fei	654
<b>Design of protection structures: The role of the grain size distribution</b> Benjy Marks, Aurelio Valaula, Alexander Puzrin, and Itai Einav	658
<b>Tumbling sandpiles in a fluid</b> Farhang Radjai, Vincent Topin, Frédéric Perales, and Yann Monerie	662
<b>Experimental investigation on failure mode of fine-grain rainfall-induced debris flow</b> Zhao Cheng, Zhou Jian, Li Yexun, and Tian Jiashen	666

## 4.2. Confined flow

<b>Mode-coupling theory for sheared granular liquids</b> Koshiro Suzuki and Hisao Hayakawa	670
<b>Velocity and density scaling at the outlet of a silo and its role in the expression of the mass flow rate</b> D. Maza, A. Janda, S. M. Rubio-Largo, I. Zuriguel, and R. C. Hidalgo	674
<b>Prediction of silo-vibrations using a modified lambda-meter</b> Stefan Jäckel, Ralf Schünemann, Thomas Mütze, and Urs A. Peuker	678
<b>Effect of friction and cohesion on anisotropy in quasi-static granular materials under shear</b> A. Singh, V. Magnanimo, and S. Luding	682
<b>Avoiding clogs: The shape of arches and their stability against vibrations</b> Angel Garcimartín, Celia Lozano, Geoffroy Lumay, and Iker Zuriguel	686
<b>The influence of particle shape on granular Hopper flow</b> G. Mollon and J. Zhao	690
<b>Microscopic analysis of Hopper flow with ellipsoidal particles</b> Sida Liu, Zongyan Zhou, Ruiping Zou, David Pinson, and Aibing Yu	694
<b>Silo clogging reduction by placing an obstacle above the outlet</b> C. Lozano, I. Zuriguel, A. Janda, A. Garcimartín, R. Arévalo, and D. Maza	698
<b>Dynamics of rotating spirals in agitated wet granular matter</b> Kai Huang, Lorenz Butzhammer, and Ingo Rehberg	702
<b>Visualising shear stress distribution inside flow geometries containing pharmaceutical powder excipients using photo stress analysis tomography and DEM simulations</b> Saeed Albaraki, S. Joseph. Antony, and C. Babatunde Arowosola	706
<b>Pipe transport in underground mining: An experimental approach</b> A. Janda, I. Zuriguel, J. Bienzobas, A. Garcimartín, and D. Maza	710

## 4.3. Mixing and Segregation

### 4.3.1. Theoretical and Numerical

<b>Size separation of binary mixture under vibration</b> Chuanping Liu, Lige Tong, Shaowu Yin, Peikun Zhang, and Li Wang	714
<b>Segregation in dense, dry, inclined flows of binary mixtures of grains</b> Michele Larcher and James T. Jenkins	718

<b>Influence of rotation on BN separation in binary particle system</b> Ping Wu, Shuang Wang, Ziang Xie, Yuming Huang, Lige Tong, Peikun Zhang, Shaowu Yin, Chuanping Liu, and Li Wang	722
<b>DEM simulation of particle mixing for optimizing the overcoating drum in HTR fuel fabrication</b> Malin Liu, Zhenming Lu, Bing Liu, and Youlin Shao	726
<b>Mixing behaviour of cohesive and non-cohesive particle mixtures in a ribbon mixer</b> H. Musha, K. Dong, G. R. Chandratilleke, J. Bridgwater, and A. B. Yu	731
<b>Simulations on the flow segregation problem in bidimensional piles</b> Jessica Benito, Rodolfo Uñac, Ana María Vidales, and Irene Ippolito	735
<b>Effects of size and density differences on mixing of binary mixtures of particles</b> H. Musha, G. R. Chandratilleke, S. L. I. Chan, J. Bridgwater, and A. B. Yu	739
<b>Radial segregation driven by axial migration</b> Xiaoxing Liu, Wei Ge, and Jinghai Li	743
<b>Formation of ordered structure and its effect on particle percolation in a vibrated bed</b> A. H. Esfandiary, K. J. Dong, and A. B. Yu	747
<b>Numerical analysis of separation and mixing dynamics in multiphase granular systems</b> Tracy Rushmer, Antoinette Tordesillas, David M. Walker, and Nick Petford	751
<i>4.3.2. Experimental</i>	
<b>Granular segregation in quasi-2d rectangular bin</b> Sandip H. Gharat and D. V. Khakhar	755
<b>The formation of polygon-shaped patterns in vibrated, cylindrical granular beds</b> G. Lu, J. R. Third, M. H. Köhl, and C. R. Müller	759
<b>Pattern formation in a flat rotating box</b> Frank Rietz and Ralf Stannarius	763
<b>Segregation of binary mixtures of spheres and ellipsoids</b> Changxing Li, Zongyan Zhou, Ruiping Zou, David Pinson, and Aibing Yu	767
<b>Segregation and convection rolls in two-dimensional packings</b> Frank Rietz	771
<b>Patterns and velocity field in vertically vibrated granular materials</b> Istafaul H. Ansari and Meheboob Alam	775
<b>Dry coating in a high shear mixer: Comparison of experimental results with DEM analysis of particle motions</b> E. Serris, A. Sato, A. Chamayou, L. Galet, M. Baron, P. Grosseau, and G. Thomas	779

## 5. GRANULAR GASES

### 5.1. Theoretical

- Evidence for a new force in dissipative system derived from Boltzmann equation: Consequence for the mechanics of the material point, experimental evidences and possible applications**  
Pierre Evesque 783
- Scaling of the normal coefficient of restitution for wet impacts**  
Thomas Müller, Frank Gollwitzer, Christof A. Krülle, Ingo Rehberg, and Kai Huang 787
- Asymmetric velocity distribution in boundary-heating granular gas and a hydrodynamic description**  
Yanpei Chen, Meiyong Hou, Pierre Evesque, Yimin Jiang, and Mario Liu 791
- Shearbanding and inhomogeneous states in granular fluid**  
Meheboob Alam and Priyanka Shukla 795
- Characteristics of Casimir-like forces in fluidized granular media**  
M. Reza Shaebani, Jalal Sarabadani, and Dietrich E. Wolf 799

### 5.2. Numerical and Experimental

- Can one "Hear" the aggregation state of a granular system?**  
Christof A. Kruelle and Almudena García Sánchez 803
- Microgravity experiments on a granular gas of elongated grains**  
K. Harth, T. Trittel, U. Kornek, S. Höme, K. Will, U. Strachauer, and R. Stannarius 807
- Collective granular dynamics in a shaken container at low gravity conditions**  
J. E. Kollmer, A. Sack, M. Heckel, F. Zimmer, P. Mueller, M. N. Bannerman, and T. Pöschel 811
- Experimental study of a granular gas homogeneously driven by particle rotations**  
E. Falcon, J.-C. Bacri, and C. Laroche 815
- Pattern dynamics of cohesive granular particles under plane shear**  
Satoshi Takada and Hisao Hayakawa 819
- Effect of gravity on particle dispersion in a horizontally vibrating bed**  
Kejun Dong, Kunio Shinohara, and Aibing Yu 823

## 6. PARTICLE PROPERTIES

### 6.1. Interparticle Interactions

- Rolling resistance effect for sheared granular materials in the inertial regime**  
Hayley H. Shen 827

<b>A new contact model for modelling of elastic-plastic-adhesive spheres in distinct element method</b> Massih Pasha, Selasi Dogbe, Colin Hare, Ali Hassanpour, and Mojtaba Ghadiri	831
<b>Wear particles: Influence on local stress and dynamical instabilities</b> Viet-Hung Nhu, Mathieu Renouf, Francesco Massi, and Aurélien Saulot	835
<b>From particle to powder properties – A mesoscopic approach combining micro-scale experiments and X-ray microtomography</b> S. Strege, H. Zetzener, and A. Kwade	839
<b>Unitary stick-slip motion in granular beds</b> J. E. Hilton, P. W. Cleary, and A. Tordesillas	843
<b>Finite element analysis of the contact forces between viscoelastic particles</b> Q. J. Zheng, H. P. Zhu, and A. B. Yu	847
<b>Calibration and validation of DEM rolling and sliding friction coefficients in angle of repose and shear measurements</b> Piotr Frankowski and Martin Morgeneyer	851
<b>Numerical simulation of interaction between two PM<sub>2.5</sub> particles under acoustic travelling wave conditions</b> Fengxian Fan, Mingjun Zhang, and Chang Nyung Kim	855
<b>An experiment investigation on electrification by collision between chemically identical glass particles</b> L. Xie, Y. Jiang, N. Bao, K. Han, and J. Zhou	859
<b>Rebound characteristics for ash particles impacting a planar surface</b> Ming Dong, Sufen Li, Jian Han, and Jun Xie	863
<b>Damping of rotating beams with particle dampers: Discrete element method analysis</b> D. N. J. Els	867
<b>Identification of micro parameters for discrete element simulation of agglomerates</b> Stefan Palis, Sergiy Antonyuk, Maksym Dosta, and Stefan Heinrich	871
<b>6.2. Size and Shape Effects</b>	
<b>Effect of size polydispersity on micromechanical properties of static granular materials</b> M. R. Shaebani, M. Madadi, S. Luding, and D. E. Wolf	875
<b>Slow dynamics for elliptical particles under continuous shear and cyclic compression</b> Somayeh Farhadi, Robert P. Behringer, and Alex Zihao Zhu	879

<b>A benchmark for particle shape dependence</b> Gaël Combe, Cécile Nouguier-Lehon, Émilien Azéma, Krzysztof Szarf, Baptiste Saint-Cyr, Marie Chaze, Farhang Radjai, Pascal Villard, Jean-Yves Delenne, Vincent Richefeu, Philippe Sornay, Charles Voivret, and CEGEO Group	883
<b>The influence of aspect ratio and roughness on flowability</b> Colin Hare and Mojtaba Ghadiri	887
<b>Comparison of the effects of rolling resistance and angularity in sheared granular media</b> Nicolas Estrada, Emilien Azéma, Farhang Radjai, and Alfredo Taboada	891
<b>Influence of the feeding rate on the packing properties of faceted particles</b> R. C. Hidalgo, M. Acevedo, I. Zuriguel, I. Pagonabarra, and D. Maza	895
<b>6.3. Size Reduction</b>	
<b>Estimation of new surface generation and energy analysis during particle fracture</b> Manoj Khanal and Jürgen Tomas	899
<b>A probabilistic approach of confined comminution in polydisperse granular materials</b> Carlos Ovalle, Charles Voivret, Christophe Dano, and Pierre-Yves Hicher	903
<b>Impact of numerical models on fragmentation processes</b> Mathieu Renouf, Belien Gezahengn, Micheline Abbas, and Florent Bourgeois	907
<b>Radical edge crack problem of a circular disk under circumference load</b> W. S. Xiao and H. P. Zhu	911
<b>A study on the effect of particle shape and fragmentation on the mechanical behavior of granular materials using discrete element method</b> Ali Aminzadeh and Ehsan Seyedi Hosseininia	915
<b>Experimental studies on the kinematics of cutting in granular materials</b> T. G. Murthy, C. Saldana, S. Yadav, and F. Du	919
<b>Evolution of sand crushability and its effect on particle-scale energy allocation</b> Bo Zhou, Runqiu Huang, and Jianfeng Wang	923
<b>Numerical simulation study of quasistatic grinding process on a model granular material</b> V. P. B. Esnault and J.-N. Roux	927
<b>Analysis of seed processing by the distinct element method</b> Mehrdad Pasha, Colin Hare, Mojtaba Ghadiri, Patrick M. Piccione, and Scott Taylor	931
<b>Numerical analysis of impact events in a centrifugal impact pin mill</b> C. Labra, J. Y. Ooi, J. F. Chen, and J. Sun	935

## 7. COHESION

### 7.1. Theoretical and Numerical

<b>Micromechanical properties of colloidal structures</b>	
A. Kwade, C. Schilde, C. Burmeister, M. Roth, P. Lellig, and G. Auernhammer	939
<b>Electrically-enhanced deposition of fine particles on a fiber: A numerical study using DEM</b>	
Mengmeng Yang, Shuiqing Li, Guanqing Liu, and Qiang Yao	943
<b>DEM study on the interaction between wet cohesive granular materials and tools</b>	
Takuya Tsuji, Yu Matsui, Yuta Nakagawa, Yuuichi Kadono, and Toshitsugu Tanaka	947
<b>Numerical estimation of the restitution coefficient for dry and wet agglomerates</b>	
Sergiy Antonyuk, Maksym Dosta, and Stefan Heinrich	951
<b>Granular cohesion and fast rotators in the NEA population</b>	
Paul Sánchez and Daniel J. Scheeres	955
<b>Assessing flowability of small quantities of cohesive powder using distinct element modelling</b>	
Massih Pasha, Colin Hare, Ali Hassanpour, and Mojtaba Ghadiri	959
<b>Particle scale investigation of flow and mixing of wet particles in rotating drums</b>	
P. Y. Liu, R. Y. Yang, and A. B. Yu	963
<b>DEM analysis of effects of particle properties and mixing conditions on particle attachment processes</b>	
Jiecheng Yang, Chuan-Yu Wu, and Michael Adams	967
<b>Flow of dry and wet granular materials: Numerical simulation results</b>	
Saeed Khamseh, Jean-Noël Roux, and François Chevoir	971
<b>7.2. Experimental</b>	
<b>Erosion rate and instability of a wet/dry granular interface</b>	
Gautier Lefebvre and Pierre Jop	975
<b>Effect of cohesion on granular-fluid flows in spouted beds: PIV measurement and DEM simulations</b>	
Runru Zhu, Shuiqing LI, and Qiang Yao	979
<b>Behavior of cohesive powder in rotating drums</b>	
M. Wojtkowski, O. I. Imole, M. Ramaioli, E. Chávez Montes, and S. Luding	983
<b>Experimental studies on the mechanics of cohesive frictional granular media</b>	
R. K. Kandasami and T. G. Murthy	987
<b>Analysis of behavior of small agglomerated particles on two-dimensional vibrating plate</b>	
Murino Kobayakawa, Shuji Matsusaka, and Shuji Matsusaka	991

<b>Influence of cohesive forces on the macroscopic properties of granular assemblies</b> Geoffroy Lumay, Jorge Fiscina, Francois Ludewig, and Nicolas Vandewalle	995
<b>Incipient flow properties of two-component fine powder mixtures: Changing the flowability of smaller particles</b> Takehiro Kojima and James A. Elliott	999
<b>Visualizing powder de-agglomeration upon impact with simultaneous flowing charge behaviour</b> Jin Wang Kwek, Desmond Heng, Sie Huey Lee, Wai Kiong Ng, Hak-Kim Chan, Jerry Heng, and Reginald Tan	1003
<b>Internal structure and fragmentation kinetics of silica granules</b> P. Grosseau, T. Dumas, O. Bonnefoy, L. Barriquand, L. Guy, and G. Thomas	1007
<b>Influence of the pan pelletizer rotational velocity and the particles size on the agglomeration of alumina oxide granules</b> Zheni Radeva, Peter Müller, and Juergen Tomas	1011
 <b>8. FLUID AND PARTICLES</b> <b>8.1. Particle-fluid Interactions</b>  	
<b>FEM-DEM simulation of two-way fluid-solid interaction in fibrous porous media</b> K. Yazdchi, S. Srivastava, and S. Luding	1015
<b>Characterization of fluid-particle interactions in poly-disperse systems</b> Francesco P. Di Maio and Alberto Di Renzo	1019
<b>Capillary states of granular materials in the funicular state</b> Jean-Yves Delenne, Vincent Richefeu, and Farhang Radjai	1023
<b>Preparation and characterisation of user-friendly PMMA microcapsules for consumer care</b> Xuemiao Pan, Ruben Mercade-prieto, David York, Jon A. Preece, and Zhibing Zhang	1027
<b>Squeeze flow of a bi-viscosity fluid between two rigid spheres</b> Xu Chun-Hui, Zhang Mi, and Xu Yong	1031
<b>A parametric study on the leakage-soil interaction due to a leaking pipe using the coupled DEM-LBM technique</b> X. Cui, J. Li, A. H. C. Chan, and D. N. Chapman	1035
<b>Water retention in discrete element method</b> Yixiang Gan, Federico Maggi, and Itai Einav	1039
<b>Free running droplets on packed powder beds</b> Catherine P. Whitby, Xun Bian, and Rossen Sedev	1043

## 8.2. Suspension, Sedimentation, Saltation, and Dust Emission

<b>Where to dig for gold? – Density segregation inside migrating dunes</b> Christopher Groh, Ingo Rehberg, and Christof A. Kruehle	1047
<b>Simulation of aeolian saltation</b> M. V. Carneiro and H. J. Herrmann	1051
<b>Dust emission modelling around a stockpile by using computational fluid dynamics and discrete element method</b> S. M. Derakhshani, D. L. Schott, and G. Lodewijks	1055
<b>Scaling laws in aeolian sand transport: Erodible versus non-erodible bed</b> A. Valance, T. D. Ho, A. Ould El Moctar, and P. Dupont	1059
<b>DEM-PFV analysis of solid-fluid transition in granular sediments under the action of waves</b> E. Catalano, B. Chareyre, and E. Barthélemy	1063
<b>Coulombic wall slip of concentrated soft-particle suspensions</b> Michael Adams, Wei Liu, Zhibing Zhang, and Peter Fryer	1067
<b>Effect of shear-induced diffusion on the transfer of heat across a sheared suspension</b> Ouamar Rahli, Xiaolong Yin, and Bloen Metzger	1071
<b>Pattern formation during capillary rising of a fluid front into a granular media</b> A. P. F. Atman, G. Combe, Thaysa R. M. Ferreira, and Jéssica A. A. Barros	1075
<b>Grain sedimentation with SPH-DEM and its validation</b> Martin Robinson, Stefan Luding, and Marco Marco Ramaioli	1079
<b>2D DEM model of sand transport with wind interaction</b> L. Oger and A. Valance	1083
<b>Wind tunnel studies on the vertical emission of sand grains from surface</b> L. Guo and N. Huang	1087
<b>Rheology of dense suspensions: Insights from soft dynamics simulations</b> P. Rognon, C. Gay, and I. Einav	1090
<b>Effect of ground granulated blast furnace slag particle size distribution on paste rheology: A preliminary model</b> Alireza Kashani, John L. Provis, and Jannie S. J. van Deventer	1094

## 8.3. Gas Fluidisation

<b>Particle dynamics in the fluidized bed: Magnetic particle tracking and discrete particle modelling</b> Johannes Neuwirth, Sergiy Antonyuk, and Stefan Heinrich	1098
--	------

<b>Transitional behavior in gas-fluidized beds</b> Colin Thornton, Fang Yang, and Jonathan Seville	1102
<b>Contact analysis of different flow regimes in gas fluidization</b> Q. F. Hou, Z. Y. Zhou, and A. B. Yu	1106
<b>Identification of flow regime in a slurry bubble column by Hilbert-Huang transform analysis</b> Weiling Li, Wenqi Zhong, Baosheng Jin, and Rui Xiao	1110
<b>Computational study of heat transfer in gas fluidization</b> Q. F. Hou, Z. Y. Zhou, and A. B. Yu	1114
<b>Discrete particle simulation of heat transfer in pressurized fluidized bed with immersed cylinders</b> Hadi Wahyudi, Kaiwei Chu, and Aibing Yu	1118
<b>SPH-DEM simulations of grain dispersion by liquid injection</b> Martin Robinson, Stefan Luding, and Marco Ramaioli	1122
<b>Novel multiscale simulation environment for modeling of fluidized bed granulation</b> Maksym Dosta and Stefan Heinrich	1126
<b>Discrete element modeling of gas fluidization of fine ellipsoidal particles</b> Jieqing Gan, Zongyan Zhou, Ruiping Zou, and Aibing Yu	1130
<b>8.4. Other Particle-fluid Flows</b>	
<b>Fluid coupling in DEM simulation using Darcy's law: Formulation, and verification</b> M. Goodarzi, C. Y. Kwok, L. G. Tham, and F. Chen	1134
<b>Polygonal particles in fluids</b> Shi Han Ng and Hans-Georg Matuttis	1138
<b>Fibrous random materials: From microstructure to macroscopic properties</b> K. Yazdchi and S. Luding	1142
<b>CFD analysis of the aerosolization of carrier-based dry powder inhaler formulations</b> Qi (Tony) Zhou, Zhenbo Tong, Patricia Tang, Runyu Yang, and Hak-Kim Chan	1146
<b>Continuous particle manipulation and separation in a hurdle-combined curved microchannel using DC dielectrophoresis</b> Ming Li, Shunbo Li, Weihua Li, Weijia Wen, and Gursel Alici	1150
<b>Numerical study of vertical pneumatic conveying: Effect of friction coefficient</b> K. Li, S. B. Kuang, R. P. Zou, R. H. Pan, and A. B. Yu	1154
<b>Study of raceway in COREX melter gasifier by using three progressive methods</b> Jun-jie Sun, Zhi-guo Luo, Zhan-xia Di, Chong-lin Liu, Zong-shu Zou, and Yan-Song Shen	1158

<b>Numerical study of jet-induced cratering of a granular bed: Effect of gravity</b> S. B. Kuang, C. Q. LaMarche, J. S. Curtis, and A. B. Yu	1162
<b>Magnetic resonance imaging (MRI) study of jet height hysteresis in packed beds</b> Maximilian H. Köhl, Guang Lu, James R. Third, Klaas P. Prüssmann, and Christoph R. Müller	1166
<b>Sensitivity to damping in sand production DEM-CFD coupled simulations</b> Natalia Climent, Marcos Arroyo, Catherine O'Sullivan, and Antonio Gens	1170
<b>Air effects on subharmonic bifurcations of impact in vertically vibrated granular beds</b> Z. H. Jiang, H. Han, R. Zhang, and X. R. Li	1174
<b>Numerical simulation of rip-raps with the distinct element method</b> Livia Mittelbach	1178
<b>Particle scale modelling of the multiphase flow in a dense medium cyclone: Effect of medium-to-coal ratio</b> Kaiwei Chu, Jiang Chen, Aibing Yu, and Andrew Vince	1182
<b>9. CONTINUUM MODELLING AND SIMULATION</b>	
<b>9.1. Granular Rheology</b>	
<b>Granular statistical mechanics: Volume-stress phase space, equipartition and equations of state</b> Raphael Blumenfeld, Joe F. Jordan, and Sam F. Edwards	1186
<b>Non-linear deformation behavior of granular media by elliptic microstructure based model</b> Kenichi Maeda and Kinya Miura	1190
<b>Modeling of a cohesive granular materials by a multi-scale approach</b> T. K. Nguyen, G. Combe, D. Caillerie, and J. Desrues	1194
<b>Dense annular flows of granular media</b> Alain de Ryck and Olivier Louisnard	1198
<b>From discrete particles to continuum fields in mixtures</b> T. Weinhart, S. Luding, and A. R. Thornton	1202
<b>Mechanisms of energy dissipation in saturated granular mass flows</b> Francesco Federico	1206
<b>Subdiffusive behavior in a two-dimensional granular assembly under shear</b> J. M. Salazar	1210
<b>Micromechanics of deformation non-coaxiality in granular materials</b> Xia Li and Hai-Sui Yu	1214

<b>Continuum stress characteristics inside shear bands</b> Antoinette Tordesillas, John F. Peters, and Jingyu Shi	1218
<b>A hierarchical model for cross-scale simulation of granular media</b> Ning Guo and Jidong Zhao	1222
<b>2D cyclic pure shear of granular materials, simulations and model</b> D. Krijgsman and S. Luding	1226
<b>Eddies, mixing and heat transfer in dense granular flows</b> P. Rognon, T. Miller, and I. Einav	1230
<b>A micromechanical numerical analysis for a triaxial compression of granular materials</b> V. Magnanimo and L. La Ragione	1234
<b>Evolution of the effective moduli for anisotropic granular materials during pure shear</b> N. Kumar, O. I. Imole, V. Magnanimo, and S. Luding	1238
<b>Modeling of time-dependent distributions of impact and kinetic energies of particulate systems</b> Javan D. Tjakra, Nicolas Hudon, Jie Bao, and Runyu Yang	1242
<b>9.2. Process Modelling and Analysis</b>	
<b>Modelling of the mechanical behaviour of two pure PTFE powders during their compaction at room temperature</b> Carole Frédy, Rodrigo B. Canto, Nicolas Schmitt, Stéphane Roux, and René Billardon	1246
<b>Multi-scale modelling of granular avalanches</b> Krishna Kumar, Kenichi Soga, and Jean-Yves Delenne	1250
<b>A brief investigation into ejection times from a conical mass flow Hopper - Coulomb and conical model difference</b> L. A. Fullard and C. E. Davies	1254
<b>Spatial and temporal coarse-graining for DEM analysis</b> C. Labra, J. Y. Ooi, and J. Sun	1258
<b>Energy dissipation of debris flow through pile group obstructions</b> Minglong Fei, Qicheng Sun, Deyu Zhong, and Gordon G. D. Zhou	1262
<b>Determining key variables of the kinetic theory of granular flow using DWS</b> V. Zivkovic, K. Berry, D. H. Glass, and M. J. Biggs	1266
<b>Numerical investigation of solid mixing in a fluidized bed coating process</b> Venkatakrishna Kenche, Yuqing Feng, Danyang Ying, Chris Solnordal, Seng Lim, and Peter J. Witt	1270

<b>Modelling ironmaking blast furnace: Solid flow and thermochemical behaviours</b> Yansong Shen, Baoyu Guo, Aibing Yu, Sheng Chew, and Peter Austin	1274
<b>Technological pretreatment of the synchysite non-oxidized ore</b> B. Munkhtsetseg and G. Burmaa	1278
<b>Dusting control of magnesium slag produced by Pidgeon process</b> Laner Wu, Qixing Yang, Fenglan Han, and Chun Du	1282
<b>Numerical simulations of solid-liquid stirred tank with an improved Intermig impeller</b> Hongliang Zhao, Ting'an Zhang, Yan Liu, Zimu Zhang, and Chao Zhang	1286
<b>Discharge of a granular silo as a visco-plastic flow</b> L. Staron, P.-Y. Lagrée, and S. Popinet	1290
<b>Effect of particle fineness on the finely disseminated iron ore for beneficiation</b> T. S. Qiu, W. X. Zhang, X. H. Fang, and G. K. Gao	1294
<b>Comparison of two methods to study the gas-liquid flows in a continuous slab casting mold</b> Zhiguo Luo, Chonglin Liu, Tao Zhang, Junjie Sun, Zongshu Zou, and Yansong Shen	1296
<b>Numerical simulations of gas-liquid flow in the gas injection process with mechanical stirring</b> Pin Shao, Ting'an Zhang, Yan Liu, Zimu Zhang, and Dongxing Wang	1300
<b>Experimental study of bottom blown oxygen copper smelting process for water model</b> Dongxing Wang, Yan Liu, Zimu Zhang, Pin Shao, and Ting'an Zhang	1304
<b>Particle scale modelling of the multiphase flow in a dense medium cyclone: Effect of near gravity material</b> J. Chen, K. W. Chu, A. B. Yu, A. Vince, G. D. Barnett, and P. J. Barnett	1308
