**PART 1**

**I. MEASUREMENT OF THE BOLTZMANN CONSTANT**

<b>The IMERAPlus joint research project for determinations of the Boltzmann constant</b> J. Fischer, B. Fellmuth, C. Gaiser, T. Zandt, L. Pitre, S. Briaudeau, F. Sparasci, D. Truong, Y. Hermier, R. M. Gavioso, C. Guianvarc'h, P. A. Giuliano Albo, A. Merlone, F. Moro, M. de Podesta, G. Sutton, R. Underwood, G. Machin, D. del Campo, J. Segovia Puras, D. Vega-Maza, J. Petersen, J. Hald, L. Nielsen, S. Valkiers, B. Darquié, C. Bordé, C. Chardonnet, C. Daussy, L. Gianfrani, A. Castrillo, P. Laporta, and G. Galzerano	1
<b>Fixed-path-length cylindrical cavities for redetermining the Boltzmann constant</b> J. T. Zhang, H. Lin, and X. J. Feng	11
<b>Internal consistency in the determination of the Boltzmann constant using a quasispherical resonator</b> M. de Podesta, R. Underwood, G. Sutton, P. Morantz, and P. Harris	17
<b>Johnson-noise thermometry based on a quantized-voltage noise source at NIST</b> A. Pollarolo, T. Jeong, S. P. Benz, P. D. Dresselhaus, H. Rogalla, and W. L. Tew	23
<b>Development of a quantum-voltage-calibrated noise thermometer at NIM</b> J. Qu, J. T. Zhang, Y. Fu, H. Rogalla, A. Pollarolo, and S. P. Benz	29
<b>Temperature-jump effect for cylindrical resonators with low quality factors</b> X. J. Feng, H. Lin, and J. T. Zhang	34

**II. THERMODYNAMIC TEMPERATURE DETERMINATIONS**

<b>Perturbation measurement of waveguides for acoustic thermometry</b> H. Lin, X. J. Feng, and J. T. Zhang	39
<b>Room temperature acoustic transducers for high-temperature thermometry</b> D. C. Ripple, W. E. Murdock, G. F. Strouse, K. A. Gillis, and M. R. Moldover	44
<b>Improvements to the Johnson noise thermometry system for measurements at 505 - 800 K</b> K. Yamazawa, W. L. Tew, A. Pollarolo, H. Rogalla, P. D. Dresselhaus, and S. P. Benz	50
<b>Thermodynamic temperature measurements of silver freezing point and HTFPs</b> Z. Yuan, X. Lu, X. Hao, W. Dong, T. Wang, Y. Lin, J. Wang, and Y. Duan	56

<b>Comparison of laser-based and monochromator-based thermodynamic temperature measurements</b>	
G. P. Eppeldauer, H. W. Yoon, J. Neira, V. B. Khromchenko, C. E. Gibson, and A. W. Smith	60

<b>Development of a new radiometer for the thermodynamic measurement of high temperature fixed points</b>	
M. R. Dury, T. M. Goodman, D. H. Lowe, G. Machin, and E. R. Woolliams	65

### III. TEMPERATURE SCALES

<b>An evolutionary approach to updating the international temperature scale</b>	
K. D. Hill	71

<b>Some mathematical properties of the ITS-90</b>	
D. R. White	81

<b>Current status and prospects for development of thermometry</b>	
A. I. Pokhodun	89

<b>Analysis of the inconsistency between two interpolations of the water-tin and water-aluminum sub-ranges of the ITS-90</b>	
Z. Kang, J. Lan, C. Liu, U. Noatsi, J. Sun, and S. Chen	94

<b>Analysis of the ITS-90 inconsistency in overlap region of the mercury-gallium and the water-argon sub-ranges</b>	
Z. Kang, J. Lan, Y. Duan, J. T. Zhang, B. Thiele-Krivoi, S. Chen, and H. Zhang	100

<b>Practical limitations of ITS-90 from the mercury triple point to the silver freeze point</b>	
J. P. Tavener, S. J. Tavener, I. F. Tavener, and N. Davies	106

<b>The role of LATU as national metrology institute of Uruguay and its responsibilities</b>	
O. Robatto, E. Quagliata, C. Santo, A. Sica, and M. Sponton	112

### IV. LOW-TEMPERATURE THERMOMETRY

<b>Realizations of the ITS-90 below 24.5561 K at NMIJ/AIST</b>	
O. Tamura, T. Nakano, T. Shimazaki, and S. Takasu	118

<b>Adjustments to the ICVGT scale of INRIM</b>	
P. P. M. Steur and D. Giraudi	124

<b>Use of the finite-element method for a dielectric-constant gas-thermometry experiment</b>	
T. Zandt, C. Gaiser, B. Fellmuth, N. Haft, B. Thiele-Krivoi, and A. Kuhn	130

<b>Low-temperature thermometry below 1 K at PTB</b> J. Engert, D. Heyer, and J. Fischer	136
<b>Investigation of uncertainty components in Coulomb blockade thermometry</b> O. M. Hahtela, M. Meschke, A. Savin, D. Gunnarsson, M. Prunnila, J. S. Penttilä, L. Roschier, M. Heinonen, A. Manninen, and J. P. Pekola	142
<b>Development of the realization of superfluid transition temperature of helium</b> P. Lin and L. Yu	148
<b>Development of an adiabatic calorimeter in the range 54K-273K in frame of a scientific collaboration LNE-NIS</b> M. G. Ahmed and Y. Hermier	153
<b>Application of inverse heat conduction problem on temperature measurement</b> X. Zhang, G. Zhou, B. Dong, Q. Li, and L. Q. Liu	156
<b>Characteristics of a liquid-helium-free calibration apparatus for cryogenic thermometers</b> T. Shimazaki	162
<b>A new capsule platinum resistance thermometer for cryogenic use</b> S. S. Courts and J. K. Krause	168
 <b>V. LOW-TEMPERATURE/WATER FIXED POINTS</b>  	
<b>New protocol for the realization of the triple points of cryogenic gases as temperature fixed points</b> B. Fellmuth	174
<b>Comparison of the triple-point temperatures of <sup>20</sup>Ne, <sup>22</sup>Ne and normal Ne</b> T. Nakano, O. Tamura, and K. Nagao	180
<b>Triple point temperature of neon isotopes: Dependence on nitrogen impurity and sealed-cell model</b> F. Pavese, P. P. M. Steur, and D. Giraudi	186
<b>Dependence of the triple point temperature of neon on isotopic composition and its implications for the ITS-90</b> F. Pavese, P. P. M. Steur, Y. Hermier, K. D. Hill, J. S. Kim, L. Lipiński, K. Nagao, T. Nakano, A. Peruzzi, F. Sparasci, A. Szmyrka-Grzebyk, O. Tamura, W. L. Tew, S. Valkiers, and J. van Geel	192
<b>The triple point of krypton</b> K. D. Hill	198
<b>The <math>\beta</math> - <math>\gamma</math> transition of oxygen as a secondary fixed point of the ITS-90</b> A. Szmyrka-Grzebyk, A. Kowal, L. Lipiński, H. Manuszkiewicz, P. P. M. Steur, and F. Pavese	204

<b>Effects of impurities on the freezing plateau of the triple point of water</b> X. Yan, J. T. Zhang, Y. Duan, W. Wang, and X. Hao	209
<b>Dilution of impurities in water triple point cells</b> A. Peruzzi, M. Dobre, G. F. Strouse, J. van Geel, and C. Davis	215
<b>Thermodynamic analysis and experimental study of the effect of atmospheric pressure on the ice point</b> A. H. Harvey, M. O. McLinden, and W. L. Tew	221
<b>VI. METAL FIXED POINTS</b>	
<b>Investigation of thermal effects on melting curves of mercury</b> M. Kalemci, A. T. Ince, and G. Bonnier	227
<b>Design, construction and test of mercury thermometric cell in CENAMEP AIP</b> R. Ortega-Cortés, E. Méndez-Lango, and A. Araolaza-Rodriguez	232
<b>Automated realization of the gallium melting and triple points</b> X. Yan, Y. Duan, J. T. Zhang, and W. Wang	237
<b>Measurement of the in freezing-point temperature: Effect of the liquid-solid interface structure</b> A. G. Ivanova, M. Yu. Abasov, S. F. Gerasimov, and A. I. Pokhodun	243
<b>Construction of an open tin cell at Inmetro</b> R. da Silva and R. N. Teixeira	249
<b>Thermal analysis on the realization of the tin fixed point</b> S. F. Tsai	255
<b>Tin-filled multi-entrance fixed point</b> D. Zvizdić and D. Šestan	259
<b>Stray thermal influences in zinc fixed-point cells</b> S. Rudtsch, A. Aulich, and C. Monte	265
<b>Electrical effects in measurements at the silver point using high temperature SPRTs</b> J. V. Widiatmo, K. Harada, K. Yamazawa, J. Tamba, and M. Arai	271
<b>Improvements in the realization of the ITS-90 over the temperature range from the melting point of gallium to the freezing point of silver at NIM</b> J. Sun, J. T. Zhang, and Q. Ping	277
<b>Impurity and thermal modelling of SPRT fixed-points</b> J. V. Pearce, R. I. Veltcheva, and M. J. Large	283

<b>A coupled heat and mass transfer model of pure metal freezing using comsol multiphysics™</b> J. V. Pearce	289
<b>Effect of heat removal along the rod on uniformity of the inner interface thickness during the crystallization initiation</b> O. S. Shulgat, M. Yu. Abasov, V. M. Fuksov, and A. I. Pokhodun	295
<b>A new compact fixed-point blackbody furnace</b> K. Hiraka, Y. Yamada, J. Ishii, H. Oikawa, T. Shimizu, S. Kadoya, and T. Kobayashi	300
<b>VII. HIGH TEMPERATURE FIXED POINTS</b>	
<b>Twelve years of high temperature fixed point research: A review</b> G. Machin	305
<b>Progress report for the CCT-WG5 high temperature fixed point research plan</b> G. Machin, K. Anhalt, P. Bloembergen, M. Sadli, Y. Yamada, and E. R. Woolliams	317
<b>Assigning thermodynamic temperatures to high-temperature fixed-points</b> E. R. Woolliams, P. Bloembergen, and G. Machin	323
<b>Measurement of thermodynamic temperature of high temperature fixed points</b> V. R. Gavrilov, B. B. Khlevnoy, D. A. Otryaskin, I. A. Grigorieva, M. L. Samoylov, and V. I. Sapritsky	329
<b>Construction of high-temperature fixed-point cells for thermodynamic temperature assignment</b> Y. Yamada, K. Anhalt, M. Battuello, P. Bloembergen, B. Khlevnoy, G. Machin, M. Matveyev, M. Sadli, and T. Wang	335
<b>Two-front melting analyzed in a one-dimensional representation for the eutectic Pt-C</b> P. Bloembergen, H. Zhang, W. Dong, and T. Wang	340
<b>Traceable Co-C eutectic points for thermocouple calibration</b> F. Jahan and M. J. Ballico	346
<b>A new technique for direct traceability of contact thermometry Co-C eutectic cells to the ITS-90</b> G. Failleau, T. Deuzé, F. Bourson, S. Briauudeau, and M. Sadli	352
<b>Thermal modelling comparing high temperature fixed point measurements by contact and non-contact thermometry</b> P. Castro, G. Machin, and J. V. Pearce	358
<b>Towards the development of high temperature comparison artifacts for radiation thermometry</b> R. N. Teixeira, G. Machin, and A. Orlando	363

<b>Comparison of three Co-C fixed points constructed using different crucible lining materials</b> A. D. W. Todd and D. J. Woods	369
<b>Numerical study of the effect of the shape of the phase diagram on the eutectic freezing temperature</b> M. Ode, N. Sasajima, Y. Yamada, P. Bloembergen, and M. Shimono	374
<b>Determination of the furnace effect of two high-temperature furnaces on metal-carbon eutectic points</b> F. Bourson, S. Briaudeau, B. Rougié, and M. Sadli	380
<b>Optimization of the thermogauge furnace for realizing high temperature fixed points</b> T. Wang, W. Dong, and F. Liu	386
 <b>VIII. RESISTANCE THERMOMETRY</b>  	
<b>Automation of the resistance bridge calibrator</b> D. R. White, H. Edgar, B. E. McLennan, and P. Saunders	392
<b>Optimizing the resolution of resistance bridges</b> D. R. White and H. Edgar	398
<b>Nonlinearity assessment of ASL F900 resistance thermometry bridges</b> W. Joung, K. S. Gam, I. Yang, and Y. G. Kim	404
<b>Characteristics of rhodium-iron resistance thermometers and interpolation properties from 0.65 K to 24.5561 K</b> R. L. Rusby and W. L. Tew	409
<b>Platinum resistance thermometers stable to <math>\pm 0.001^\circ\text{C}</math> per year</b> J. P. Tavener and N. Davies	414
<b>Stability test of industrial platinum resistance thermometers at 450 °C for 1000 hours</b> H. Sato	417
<b>Long term stability and hysteresis effects in Pt100 sensors used in industry</b> S. Ljungblad, M. Holmsten, L.-E. Josefson, and B. Klevedal	421
<b>Temperature-measurement errors with capsule-type resistance thermometers</b> C. Gaiser and B. Fellmuth	427
<b>Strategies for minimising the uncertainty of the SPRT self-heating correction</b> R. I. Veltcheva, J. V. Pearce, R. da Silva, G. Machin, and R. L. Rusby	433
<b>Comparison between classical GUM and Bayesian uncertainty estimation approaches in SPRT calibrations</b> D. del Campo, C. García, and S. Ruiz	439

<b>Hysteresis of thin film IPRTs in the range 100 °C to 600° C</b> D. Zvizdić and D. Šestan	445
<b>Normal and anomalous self-heating in capsule-type resistance thermometers in the range 1 K to 273 K</b> W. L. Tew and C. W. Meyer	451
<b>The residual and temperature-dependent resistance of reference-grade platinum wire below 13.8 K</b> W. L. Tew, W. E. Murdock, M. J. Chojnacky, and D. C. Ripple	457
<b>SPRT immersion profiles in a TPW cell with the use of metal bushings</b> V. Žužek, J. Bojkovski, V. Batagelj, and J. Drnovšek	463
<b>IX. CALIBRATION METHODS AND UNCERTAINTY</b>	
<b>Blackbody comparator for thermocouple calibration</b> M. Ojanen, O. M. Hahtela, and M. Heinonen	468
<b>Design and implementation of a dedicated calorimeter for long stem SPRTs calibrations at the argon and oxygen triple points</b> I. Didi-Alaoui, D. Fiorillo, A. Vergé, F. Sparasci, D. Jouin, and Y. Hermier	474
<b>A low temperature comparator for calibration of industrial thermometers in the range –190 °C to –25 °C</b> R. Bosma, C. K. de Bruin-Barendregt, R. van Breugel, and A. Peruzzi	480
<b>A new calorimeter for the simultaneous calibration of SPRTs and CSPRTs at the triple point of mercury</b> F. Sparasci, I. Didialaoui, A. Vergé, and Y. Hermier	486
<b>A study about the fitting curves for the calibration of the Pt/Rh family thermocouples in fixed points</b> D. del Campo and C. García	492
<b>A robust approach to using of the redundant information in the temperature calibration</b> R. Strnad, L. Kňazovická, M. Šindelář, and J. Kukul	498
<b>Self-calibration of a W/Re thermocouple using a miniature Ru-C (1954 °C) eutectic cell</b> O. Ongrai, J. V. Pearce, G. Machin, and S. J. Sweeney	504
<b>Updated uncertainty budgets for NIST thermocouple calibrations</b> C. W. Meyer and K. M. Garrity	510
<b>Estimation of the extrapolation error in the calibration of type S thermocouples</b> P. Giorgio, K. M. Garrity, M. Jiménez Rebagliati, and J. García Skabar	516

<b>Quantifying the calibration uncertainty attributable to thermocouple inhomogeneity</b> K. D. Hill and D. J. Gee	520
<b>The reliability of calibration for thermocouples in industry at around 1300 °C</b> H. Ogura, H. Numajiri, and T. Kobayashi	526
<b>X. THERMOCOUPLE THERMOMETRY</b>	
<b>Thermoelectric homogeneity and stability of platinum-rhodium alloyed thermoelements of different compositions</b> F. Edler and P. Ederer	532
<b>Thermocouples with improved high-temperature creep property by oxide dispersion strengthening</b> T. Hamada, H. Yamasaki, and T. Kodama	538
<b>Analysis of inhomogeneity in Au/Pt thermocouples to allow intercomparisons at better than 10 millikelvins</b> M. J. Ballico and F. Jahan	544
<b>Pt/Pd thermocouple resilience over 327 operating hours in an industrial calibration laboratory</b> C. J. Elliott, J. V. Pearce, G. Machin, T. Ford, and K. Hicks	549
<b>Drift and inhomogeneity of Pt/Pd thermocouples exposed to around 1500 °C</b> H. Ogura, M. Izuchi, J. Tamba, and M. Arai	554
<b>Type T reference function suitability for low temperature applications</b> D. Dowell	560
<b>The contributions to drift of positive and negative thermoelements in type K bare-wire thermocouples</b> M. Scervini and C. Rae	564
<b>The contributions to drift of positive and negative thermoelements in type K MIMS thermocouples</b> M. Scervini and C. Rae	570
<b>Stability of cable thermocouples at the upper temperature limit of their working range</b> A. A. Ulanovskiy, E. S. Zemba, A. M. Belenkiy, S. I. Chibizova, and A. N. Bursin	576
<b>Oxidation-resisting technology of W-Re thermocouples and their industrial applications</b> K. Wang, M. Dai, J. Dong, L. Wang, and T. Wang	581
<b>Assessment of tungsten/rhenium thermocouples with metal-carbon eutectic fixed points up to 1500°C</b> M. Gotoh	587

<b>Thermoelectric properties of W-Re composite strengthened by nanoparticles of yttrium oxide</b> P. P. Oleynikov, P. A. Zaytsev, V. N. Turchin, A. A. Ulanovskiy, and S. N. Nenashev	591
<b>Self-validating type C thermocouples to 2300 °C using high temperature fixed points</b> J. V. Pearce, C. J. Elliott, G. Machin, and O. Ongrai	595
<b>Best practices for deploying thermocouple instruments</b> A. Demling, D. Ousley, and S. Stelley	601

## PART 2

### XI. RADIATION THERMOMETRY-STANDARDS

<b>Radiometric characterization of a high temperature blackbody in the visible and near infrared</b> R. D. Taubert and J. Hollandt	607
<b>Radiation thermometer size-of-source effect testing using aperture</b> F. Liebmann and T. Kolat	613
<b>Dealing with the size-of-source effect in the calibration of direct-reading radiation thermometer</b> P. Saunders	619
<b>A focus effect in some thermal imaging systems</b> P. Saunders and D. R. White	625
<b>Effective radiance temperature: Concept, measurement and effective wavelength</b> Z. Yuan	631
<b>The size-of-source effect correction under eccentric aiming</b> Z. Yuan and L. Guo	637
<b>An InGaAs detector based radiation thermometer and fixed-point blackbodies for temperature scale realization at NIM</b> X. Hao, Z. Yuan, J. Wang, and X. Lu	643
<b>Lens transmission measurement for an absolute radiation thermometer</b> X. Hao, Z. Yuan, and X. Lu	649
<b>Blackbody radiation sources for the IR spectral range</b> S. A. Ogarev, S. P. Morozova, A. A. Katysheva, B. E. Lisiansky, and M. L. Samoylov	654
<b>High temperature blackbody BB2000/40 for calibration of radiation thermometers and thermocouple</b> S. A. Ogarev, B. B. Khlevnoy, M. L. Samoylov, and A. V. Puzanov	660

<b>Radiation thermometry standards at NMIJ from <math>-30\text{ }^{\circ}\text{C}</math> to <math>2800\text{ }^{\circ}\text{C}</math></b> J. Ishii, Y. Yamada, N. Sasajima, and Y. Shimizu	666
<b>A transfer function approach to studying the size-of-source and distance effects in radiation thermometry</b> E. M. Vuelban and P. R. Dekker	672
<b>A low-temperature blackbody source from <math>-30\text{ }^{\circ}\text{C}</math> to <math>30\text{ }^{\circ}\text{C}</math> for industrial calibration</b> L. Kňazovická and R. Strnad	678
<b>A comparison of absolute calibrations of a radiation thermometer based on a monochromator and a tunable source</b> T. Keawprasert, K. Anhalt, D. R. Taubert, A. Sperling, M. Schuster, and S. Nevas	682
<b>Uncertainty due to non-linearity in radiation thermometers calibrated by multiple fixed points</b> Y. Yamaguchi and Y. Yamada	688
<b>High dynamic range measurement of spectral responsivity and linearity of a radiation thermometer using a super-continuum laser and LEDs</b> Y. S. Yoo, D. H. Lee, C. W. Park, and S. N. Park	693
<b>Radiance temperature scales of KRISS realized by two radiation thermometers using pyroelectric detector and silicon photodiode from 273 K to 2900 K</b> Y. S. Yoo, C. W. Park, B. H. Kim, and S. N. Park	698
<b>XII. RADIATION THERMOMETRY-EMISSIVITY, APPLICATIONS, AND MATERIAL PROPERTIES</b>	
<b>Normal spectral emissivity near 680 nm at melting and in the liquid phase for 18 metallic elements</b> G. Pottlacher, K. Boboridis, C. Cagran, T. Hüpf, A. Seifert, and B. Wilthan	704
<b>Emissivity properties of silicon wafers and their application to radiation thermometry</b> T. Iuchi and T. Seo	710
<b>Sensitivity of blackbody effective emissivity to wavelength and temperature: By genetic algorithm</b> E. K. Ejigu and H. G. Liedberg	716
<b>Radiation thermometry for remote sensing at PTB</b> C. Monte, B. Gutschwager, A. Adibekyan, M. Kehrt, F. Olschewski, and J. Hollandt	722
<b>A comparison of irradiance responsivity and thermodynamic temperature measurement between PTB and NIM</b> X. Lu, K. Anhalt, R. D. Taubert, and Z. Yuan	728
<b>Pyrometry of materials with changing, spectrally-dependent emissivity - Solid and liquid metals</b> R. A. Felice and D. A. Nash	734

<b>A simple method for the measurement of reflective foil emissivity</b> M. J. Ballico and E. W. M. van der Ham	740
<b>Measurements of infrared spectral directional emittance at NIST - A status update</b> B. Wilthan, L. M. Hanssen, and S. Mekhontsev	746
<b>The influence of the spectral emissivity of flat-plate calibrators on the calibration of IR thermometers</b> D. Cárdenas-García and E. Méndez-Lango	752
<b>Comparison of the emissivity uniformity of several blackbody cavities</b> J. Wang, Z. Yuan, and Y. Duan	757
<b>Radiation-thermometric study of isolated hot molten metal spheres by containerless and contactless measurement techniques</b> G. W. Lee, S. Jeon, C. Park, D. H. Kang, B. I. Choi, and S. N. Park	762
<b>Reflectance thermometry in dynamic compression experiments</b> D. H. Dolan, T. Ao, and C. T. Seagle	767
<b>XIII. INTERNATIONAL COMPARISONS</b>	
<b>Comparison of Co-C eutectic fixed-point cells between VNIIM and VNIIOFI</b> Y. Sild, B. Khlevnoy, M. Matveyev, I. A. Grigorieva, and V. M. Fuksov	771
<b>Bilateral comparison of tin fixed point cells between INMETRO and NPL</b> R. da Silva, R. I. Veltcheva, J. Gray, J. V. Pearce, G. Machin, and R. N. Teixeira	777
<b>Comparison of mercury triple point cells assembled by TUBITAK UME and CEM</b> M. Kalemci, C. Tabacaru, and D. del Campo	782
<b>Bilateral ITS-90 comparison at WC-C peritectic fixed point between NIM and NPL</b> W. Dong, D. H. Lowe, X. Lu, G. Machin, Z. Yuan, T. Wang, P. Bloembergen, and C. Xiao	786
<b>Realization of the WC-C peritectic fixed point at NIM and NMIJ</b> T. Wang, N. Sasajima, Y. Yamada, C. Bai, Z. Yuan, W. Dong, C. Ara, and X. Lu	791
<b>Comparison of realizations of Re-C fixed points filled and measured at NPL and NRC</b> A. D. W. Todd, D. H. Lowe, W. Dong, and D. J. Woods	797
<b>International comparison of resistance thermometers between NMIs from Spain, Mexico and Andean countries</b> D. del Campo, V. C. Ruiz, E. Méndez-Lango, L. Córdova, E. von Borries, C. A. Sánchez, A. Arévalo, B. Aguilera, E. Guillén, C. Cabrera, and L. Quintana	802
<b>Bilateral comparison of an IPRT between KRISS and SIC</b> I. Yang and C. A. Sánchez	808

<b>Comparison of the realizations of the ITS-90 over the range from 83.8058 K to 692.677 K</b> J. Bojkovski, N. Arifović, A. K. Doğan, M. Kalemci, O. Petrusova, S. Simić, T. Veliki, D. Zvizdić, and J. Drnovšek	813
---	-----

<b>International comparison of platinum resistance thermometers between Chile and Ecuador</b> M. Araya and D. Almeida	819
--	-----

#### XIV. TEMPERATURE CONTROL

<b>A new cryostat for precise temperature control</b> B. Dong, G. Zhou, L. Q. Liu, X. Zhang, L. Y. Xiong, and Q. Li	825
--	-----

<b>Cesium heat-pipe thermostat</b> F. Wu, D. Song, X. Yi, Z. Yu, K. Sheng, and J. Wu	830
---	-----

<b>NIM gas controlled sodium heat pipe</b> X. Yan, J. T. Zhang, A. Merlone, Y. Duan, and W. Wang	834
---	-----

<b>Improvement in temperature stability of standard resistors using heat pipe technology</b> X. Yan, Y. Duan, J. T. Zhang, W. Wang, L. Wang, and J. Li	840
---	-----

<b>Features of temperature control of fuel element cladding for pressurized water nuclear reactor “WWER-1000” while simulating reactor accidents</b> P. A. Zaytsev, S. V. Priymak, V. B. Usachev, P. P. Oleynikov, and D. M. Soldatkin	845
---	-----

<b>Ultra-high temperature isothermal furnace liners (IFLS) for copper freeze point cells</b> P. M. Dussinger and J. P. Tavener	851
---	-----

<b>Temperature mapping of temperature controlled enclosures (−70 °C to 180 °C): Pitfalls and recommendations</b> M. White and D. Mac Lochlainn	857
---	-----

#### XV. PHOSPHOR THERMOMETRY

<b>Phosphor thermometry signal analysis and interpretation</b> S. W. Allison and G. T. Gillies	863
---	-----

<b>Phosphor thermometry at high repetition rates</b> N. Fuhrmann, J. Brübach, and A. Dreizler	867
--	-----

<b>Temperature sensing above 1000 °C using Cr-doped GdAlO<sub>3</sub> spin-allowed broadband luminescence</b> J. I. Eldridge and M. D. Chambers	873
--	-----

<b>Response regime studies on standard detectors for decay time determination in phosphor thermometry</b>	879
C. Knappe, F. Abou Nada, J. Lindén, M. Richter, and M. Aldén	
<b>Precision and accuracy of luminescence lifetime-based phosphor thermometry: A case study of Eu(III):YSZ</b>	885
B. Heeg and T. P. Jenkins	
<b>Thermal history sensing with thermographic phosphors</b>	891
A. L. Heyes, A. Rabhiou, J. P. Feist, and A. Kempf	
<b>Application of a production line phosphorescence sensor coating system on a jet engine for surface temperature detection</b>	897
P. Y. Sollazzo, J. P. Feist, S. Berthier, B. Charnley, J. Wells, and A. L. Heyes	
<b>Progress toward luminescence-based VAATE turbine blade and vane temperature measurement</b>	903
T. P. Jenkins, J. I. Eldridge, S. W. Allison, R. H. Niska, J. J. Condevaux, D. E. Wolfe, E. H. Jordan, and B. Heeg	
<b>XVI. NOVEL THERMOMETERS AND FIXED POINTS</b>	
<b>Novel developments in rapid thermal processing (RTP) temperature measurement and control</b>	909
B. E. Adams and A. M. Hunter	
<b>Preliminary experiments of photoelectron thermometry</b>	915
I. Kinoshita, E. Kobayashi, and J. Ishii	
<b>A temperature sensor based on a whispering gallery mode resonator</b>	920
L. Yu and V. Fericola	
<b>A speed of sound based feed water temperature sensor</b>	925
P. Klason, M. Holmsten, A. Andersson, P. Lau, and G. J. P. Kok	
<b>Micro string resonators as temperature sensors</b>	931
T. Larsen, S. Schmid, and A. Boisen	
<b>Investigation on the Curie temperature of a ferroelectric material as a temperature fixed-point</b>	937
M. Schalles, T. Fröhlich, H. T. Langhammer, and D. Boguhn	
<b>Practical acoustic thermometry with acoustic waveguides</b>	943
G. Sutton, M. de Podesta, R. I. Veltcheva, P. Gélat, H. D. Minh, and G. Edwards	

## XVII. THERMOMETRY FOR SPECIAL APPLICATIONS

<b>Response time testing of temperature sensors using loop current step response method</b> H. M. Hashemian	949
<b>HiTeMS: A project to solve high temperature measurement problems in industry</b> G. Machin, K. Anhalt, F. Edler, J. V. Pearce, M. Sadli, R. Strnad, and E. M. Vuelban	958
<b>Thermal testing of undersea oil and gas pipeline insulation</b> J. V. Pearce, C. J. Elliott, W. Deeks, and M. Underwood	964
<b>Temperature monitoring options available at the Idaho national laboratory advanced test reactor</b> J. E. Daw, J. L. Rempe, D. L. Knudson, T. C. Unruh, B. M. Chase, K. L. Davis, and A. J. Palmer	970
<b>Blackbody for metrological control of ear thermometers</b> D. Cárdenas-García and E. Méndez-Lango	976
<b>Statistical relationship between human axillary and forehead temperatures</b> Z. Yuan, X. Hao, F. Wang, X. Tu, C. Bai, and L. Ran	981
<b>Temperature measurement in flow pipes: Comparison with single Pt-100 and multisensors</b> P. Klason, M. Holmsten, A. Andersson, P. Lau, and G. J. P. Kok	987
<b>Phase change references for in-flight recalibration of orbital thermometry</b> T. S. Topham, H. Latvakoski, and M. Watson	993
<b>Temperature calibration of cryoscopic solutions used in the milk industry by adiabatic calorimetry</b> E. Méndez-Lango, L. Lira-Cortes, and R. Quiñones-Ibarra	998
<b>MetroFission: New high-temperature references and sensors for the nuclear industry</b> M. Sadli, D. del Campo, M. de Podesta, T. Deuzé, G. Failleau, C. J. Elliott, S. Fourrez, C. García, and J. V. Pearce	1003
<b>Applicability of thermal imaging for assessment of energy efficiency in buildings</b> I. Pušnik	1009
<b>Methods for accurate cold-chain temperature monitoring using digital data-logger thermometers</b> M. J. Chojnacky, W. M. Miller, and G. F. Strouse	1014

## XVIII. GEOPHYSICAL THERMOMETRY

### **The international surface temperature initiative**

P. W. Thorne, J. H. Lawrimore, K. M. Willett, R. Allan, R. E. Chandler, A. Mhanda, M. de Podesta, A. Possolo, J. Revadekar, M. Rusticucci, P. A. Stott, G. F. Strouse, B. Trewin, X. L. Wang, A. Yatagai, C. Merchant, A. Merlone, T. C. Peterson, and E. M. Scott 1020

### **A new challenge for meteorological measurements: The "MeteoMet" project - Metrology for meteorology**

A. Merlone, G. Lopardo, I. Antonsen, S. Bell, R. Benyon, N. Boese, D. del Campo, M. Dobre, J. Drnovšek, A. Elkatmis, E. Georgin, E. Grudniewicz, M. Heinonen, C. Holstein-Rathlou, J. Johansson, P. Klason, R. Knorova, C. Melvad, J. Merrison, K. Migala, M. de Podesta, H. Saathoff, D. Smorgon, F. Sparasci, R. Strnad, A. Szmyrka-Grzebyk, and E. Vuillermoz 1030

### **The international surface temperature initiative's global land surface databank**

J. H. Lawrimore, J. Rennie, W. Gambi de Almeida, J. Christy, M. Flannery, B. Gleason, A. Klein-Tank, A. Mhanda, K. Ishihara, D. Lister, M. J. Menne, V. Razuvaev, M. Renom, M. Rusticucci, J. Tandy, P. W. Thorne, and S. Worley 1036

### **GCOS reference upper air network (GRUAN): Steps towards assuring future climate records**

P. W. Thorne, H. Vömel, G. Bodeker, M. Sommer, A. Apituley, F. Berger, S. Bojinski, G. Braathen, B. Calpini, B. Demoz, H. J. Diamond, J. Dykema, A. Fassò, M. Fujiwara, T. Gardiner, D. Hurst, T. Leblanc, F. Madonna, A. Merlone, A. Mikalsen, C. D. Miller, T. Reale, K. Rannat, C. Richter, D. J. Seidel, M. Shiotani, D. Sisterson, D. G. H. Tan, R. S. Vose, J. Voyles, J. Wang, D. N. Whiteman, and S. Williams 1042

### **Statistical methods for change-point detection in surface temperature records**

A. L. Pintar, A. Possolo, and N. F. Zhang 1048

### **Regional homogenization of surface temperature records using robust statistical methods**

A. L. Pintar, A. Possolo, and N. F. Zhang 1054

### **Benchmarking homogenization algorithms for monthly data**

V. K. C. Venema, O. Mestre, E. Aguilar, I. Auer, J. A. Guijarro, P. Domonkos, G. Vertacnik, T. Szentimrey, P. Stepanek, P. Zahradnicek, J. Viarre, G. Müller-Westermeier, M. Lakatos, C. N. Williams, M. J. Menne, R. Lindau, D. Rasol, E. Rustemeier, K. Kolokythas, T. Marinova, L. Andresen, F. Acquaotta, S. Fratiannil, S. Cheval, M. Klancar, M. Brunetti, C. Gruber, M. Prohom Duran, T. Likso, P. Esteban, T. Brandsma, and K. Willett 1060

### **Sampling and measurement issues in establishing a climate reference upper air network**

T. Gardiner, F. Madonna, J. Wang, D. N. Whiteman, J. Dykema, A. Fassò, P. W. Thorne, and G. Bodeker 1066

### **Benchmarking the performance of pairwise homogenization of surface temperatures in the United States**

M. J. Menne, C. N. Williams, and P. W. Thorne 1072

### **Author Index**

1079
