## TABLE OF CONTENTS

CRUDE/VACUUM DISTILLATION & COKING .....	6
Introduction.....	6
Safety .....	9
Question 54: What methods and technologies are you using to monitor vapor pressure and H <sub>2</sub> S levels in the vapor space in crude railcars and trucks? What engineering controls are being used by the rail and trucking companies to insure that the vapor pressure and H <sub>2</sub> S are being met?.....	9
Question 54: Answer Book Response.....	14
Question 55: What operating procedures and designs are you using to increase the safety of drilling coke drums? .....	15
Question 55: Answer Book Response.....	22
Coker.....	26
Question 56: The EPA recently announced the requirement to depressure coke drums to below 2 psig (pound per square inch gauge) prior to venting to atmosphere regulations. How will this new regulation impact your coker operation and design?.....	26
Question 56: Answer Book Responses .....	32
Question 57: If vacuum tower bottom feed to the coker unit drops below unit minimum charge rate, what are your available operating options?.....	36
Question 57: Answer Book Responses .....	40
Question 58: What are you using for velocity medium in coker heaters? Are you using boiler feed water (BFW)? .....	44
Question 58: Answer Book Responses .....	48
Crude Handling .....	50
Question 59: What is your experience processing a crude oil that has been treated with a pour point depressant and/or wax dispersant agent?.....	50
Question 59: Answer Book Response.....	51
Question 60: How does the mercury in crude distribute in your refinery; e.g., what units are affected? What operating procedures or technology are you using to mitigate this issue? ..	51
Question 60: Answer Book Response.....	58
Question 61: What measurement and/or predictive methods are you using to determine crude oil blend compatibility? .....	58
Question 61: Answer Book Responses .....	60
Crude Units .....	62

Question 62: What are the advantages and disadvantages to constructing “modular” refining process units versus traditional “stick-built” units? What are the issues with each construction approach? .....	62
Question 62: Answer Book Response.....	72
Unit Operations .....	73
Question 63: For the operating company panel members, what are your crude unit typical run-lengths between shutdowns? What factors do you consider when setting this run cycle? .....	73
Question 63: Answer Book Response.....	76
Desalting .....	77
Question 64: Some crudes appear to have chlorides that are not readily removed in the desalter. What are sources for these undesalted chlorides? How do you detect and mitigate the various undesalted chlorides? .....	77
Question 64: Answer Book Responses .....	84
Question 65: What are the advantages and issues with different desalter washwater sources in a refinery? What issues do you experience by combining washwater from multiple sources?.....	85
Question 65: Answer Book Responses .....	89
Question 66: What desalter instrumentation issues do you experience when switching from a light-gravity feed to a heavy-gravity feed? .....	90
Question 66: Answer Book Responses .....	93
Wastewater.....	94
Question 67: What is your experience with toxicity issues at the water treatment plant (WTP) as related to naphthenic acid content in desalter brine water? What strategies are you employing employed to mitigate this issue?.....	94
Question 67: Answer Book Response.....	96
Fouling .....	97
Question 68: What is your experience with toxicity issues at the water treatment plant as related to naphthenic acid content in desalter brine water? What strategies are you employing to mitigate this issue?.....	97
Question 68: Answer Book Responses .....	105
Furnace.....	108
Question 69: What is your experience with using thermal scans or other methods to monitor tube wall temperature furnaces? .....	108
Question 69: Answer Book Responses .....	111
Desalting .....	113
Question 70: Please discuss the merits and detriments of using low base strength or high base strength neutralizers for corrosion control in atmospheric column overhead. ....	113

Question 70: Answer Book Responses .....	118
Question 71: What is your Best Practice for responding to a ruptured heater tube in the crude unit?.....	119
Question 71: Answer Book Response.....	121
Question 72: What discrepancies do you see between simulation predictions and actual crude and vacuum operational data?.....	122
Question 72: Answer Book Responses .....	133
Question 73: There is increasing economic incentive to operate crude units to yield maximum middle distillate volume. What targets are you using to quantify the degree of separation between naphtha and kerosene and between diesel and gas oil? What amount of distillation curve overlap do you consider good practice? What guidance can you give for achieving the target separation?.....	137
Question 73: Answer Book Responses .....	143
Vacuum Tower.....	143
Question 74: What are the main causes of vacuum jet ejector poor performance? What methods have you used to mitigate these issues? .....	143
Question 74: Answer Book Responses .....	148
Question 75: Do you draw liquid hydrocarbon from the overhead system in the vacuum tower after the precondenser? What is the operating temperature of the tower overhead? What issues do you observe? .....	149
Question 75: Answer Book Responses .....	150
Question 76: What is considered industry Best Practices with respect to the control of thermal cracking in vacuum tower bottoms? If quench is not available, what other parameters do you monitor and control? How do you establish the target control points? .....	151
Question 76: Answer Book Responses .....	154
Question 77: What operating procedures do you use to mitigate/prevent coking issues in the vacuum tower from loss of wash oil pumps?.....	155
Question 77: Answer Book Responses .....	156
Question 78: What economic issues do you consider when deciding how deep to cut heavy vacuum gas oil?.....	157
Question 78: Answer Book Response.....	159
Question 79: What is your experience with respect to the use of trough distributors in vacuum wash zone service? Please address installation, reliability, and performance. ....	160
Question 79: Answer Book Response.....	167
Closing Remarks .....	167
Answer Book Only 1: On your CDUs that employ 300 series stainless steel metallurgy in the vacuum transfer line, do you experience any issue with PTASCC (polythionic acid stress corrosion cracking)? This area is very difficult to passivate with, say, soda ash per	

recommended NACE procedures, and we would like to know of any such PTASCC  
experience. .... 168

Answer Book Only 2: SRU sulfur production is being changed significantly as some plants  
operate in batch operations between heavy and tight oil crude runs. What modifications do  
you make to accommodate the SRU turndown to ensure high reliability?..... 168
