

2015 International School on Nonsinusoidal Currents and Compensation

(ISNCC 2015)

**Lagow, Poland
15-18 June 2015**

**IEEE Catalog Number: CFP1509E-POD
ISBN: 978-1-4799-8417-6**

Table of contents

No.	Author(s)	Title	File
1.	Jovan Č. Mikulović, Tomislav B. Šekara,	A New Reactive Power Definition Based on the Minimization of the Load Non-Reactive Currents	ID10/pg. 1
2.	S. Czapp, D. Swisulski,	Computer System for Evaluation of Shock Hazard in Circuits with Non-sinusoidal Earth Currents	ID11/pg. 7
3.	R. Kowalak, R. Malkowski, S. Czapp, J. Klucznik, Z. Lubosny, K. Dobrzynski,	Influence of Shunt Compensation with SVC Devices on Resonance Risk in Power Systems	ID13/pg. 12
4.	D. Borkowski, A. Wetula, J. Kowalski,	Uncertainty Estimation in Noninvasive Measurement of Harmonic Impedance – Laboratory Studies	ID14/pg. 17
5.	G. Kaatz, F. Grumm, M. Jordan, D. Schulz,	Influence of grid-connected solar inverters and mains monitoring systems on the spectral grid impedance	ID15/pg. 21
6.	D. Borkowski, J. Nabielec, A. Wetula,	Experimental verification of the voltage divider with auto-calibration	ID16/pg. 27
7.	Y. Beck, N. Calamero, L. Katzir, D. Shmilovitz,	Features Generation by Means of Currents' Physical Components for Load Identification	ID17/pg. 32
8.	Y. Loewenstern, L. Katzir, D. Shmilovitz,	The Effect of System Characteristics on Very-Short-Term Load Forecasting	ID18/pg. 37
9.	J. Foulquier,	Selective Compensation of Harmonics of Unidentified Nonlinear Loads as Ancillary Function of Grid Inverters	ID19/pg. 43
10.	S. Barcentewicz, D. Borkowski,	Synchrophasor based Islanding Detection method	ID20/pg. 48
11.	S. Sakar, S. H. E. Abdel Aleem, M. E. Balci, A. F. Zobaa,	A Filter Design Approach to Maximize Ampacity of Cables in Nonsinusoidal Power Systems	ID21/pg. 52
12.	Krzysztof Piątek, Andrzej Firlit, Daniel Wojciechowski,	Field experience with Statcom in application to wind farms	ID22/pg. 56
13.	M. Dempc, P. J. Chrzan,	Voltage and frequency regulation of a standalone induction generator by reduced-rating power electronic compensators - comparative evaluation	ID24/pg. 61
14.	Chamberlin Stéphane Azebaze Mboving, Zbigniew Hanzelka,	Different approaches for designing the passive power filters	ID25/pg. 66
15.	Dimitri Jeltsema,	Budeanu's Concept of Reactive and Distortion Power Revisited	ID26/pg. 72
16.	Leszek S. Czarnecki, Tracy N. Touns,	Working and Reflected Active Powers of Three-Phase Loads	ID30/pg. 78
17.	Adam Ruszczyk, Krzysztof Kóska, Konrad Janisz,	Solid-state switch for capacitors bank used in reactive power compensation	ID31/pg. 83
18.	M. Jordan, F. Grumm, H. Langkowski, T. Do Thanh, D. Schulz,	Online Network Impedance Identification with Wave-Package and Inter-Harmonic Signals	ID32/pg. 88
19.	Z. Fedyczak, P. Szcześniak, J. Kaniewski,	Modelling of voltage transfer function of the three-phase hybrid transformers with voltage or current source matrix converter	ID33/pg. 94
20.	Adrian Pana, Alexandru Baloi, Florin Molnar-Matei,	Numerical evaluation of the effects of phase admittances asymmetry at HVAC overhead lines	ID34/pg. 100
21.	F. Martell, A. Izaguirre and M. Macias,	CPC Power Theory for Analysis of Arc Furnaces	ID35/pg. 106
22.	Zbigniew Sadowski,	Comparison of PLC-PRIME and PLC-G3 protocols	ID36/pg. 112
23.	Gianfranco Chicco, Angela Russo, Filippo Spertino,	Supraharmonics: Concepts and Experimental Results on Photovoltaic Systems	ID37/pg. 118
24.	A.C. Moreira, S. M. Deckmann, F.P. Marafão, L.C.P. da Silva, H.K.M. Paredes,	Methodology for Defining Effective Power Factor Compensation in Three-phase Systems	ID38/pg. 124
25.	Paul Haley,	Limitations of Cross Vector Generalized p-q Theory	ID40/pg. 130
26.	L.I. Kovernikova,	Analysis of active powers of non-linear loads connected to the high voltage network	ID42/pg. 135
27.	Selcuk Sakar, Aslan Deniz Karaoglan, Murat Erhan Balci, Shady H. E. Abdel Aleem, Ahmed F. Zobaa,	Optimal Design of Single-Tuned Passive Filters Using Response Surface Methodology	ID43/pg. 139
28.	A.R. Izaguirre, M.E. Macias, F. Martell,	Accurate CPC Power Analysis under Extreme EAF's Distortion Conditions.	ID44/pg. 145
29.	A. Cichowski, W. Sleszynski, J. Nieznanski,	Comprehensive compensation of grid current distortion by shunt active power filters	ID45/pg. 151

30. Leszek S. Czarnecki, Prashanna D. Bhattarai, Reactive Compensation of LTI Loads in Three-Wire Systems at Asymmetrical Voltage ID46/pg. 157
31. Leszek S. Czarnecki, Critical Comments on the Conservative Power Theory (CPT) ID47/pg. 162
32. A. Markowski, E. Michta, R. Szulim, Communication structures and time dependency analysis in Buildings Energy Management Systems ID48/pg. 169
33. M. Michalski, G. Wiczyński, Estimation of parameters for obnoxious load which does not increase amplitude of voltage fluctuations ID49/pg. 174
34. Piotr Powroźnik, Emil Michta, Elastic Model of Energy Management in Micro Smart Grid ID50/pg. 180
35. V. Staudt, M. Kleine Jäger, D. Meyer, R. Bartelt, C. Heising, Reaction of grid-connected converters to unbalanced grid voltages with focus on modular multilevel converters ID52/pg. 186
36. V. Staudt, A. Rothstein, M. Kleine Jäger Blanking-time effects in the context of modular multilevel converters ID53/pg. 191
37. Hanoch Lev-Ari, Aleksandar M. Stanković, A Sparse Sampling Approach to Dynamic Sub-Cycle Decomposition of Apparent Power in General Polyphase Networks T1/pg. 196
38. T. Sikorski, Power Quality in Low-Voltage Distribution Network with Distributed Generation T2/pg. 203
39. J. Kaniewski, Z. Fedyczak, P. Szcześniak, AC voltage transforming circuits in power systems T3/pg. 212
40. Leszek S. Czarnecki, Currents' Physical Components (CPC) in systems with semi-periodic voltages and currents T4/pg. 222
