## **Session A1L-A: Plenary**

**May 4, 2015 8:15 - 10:15**

**Session Chairs:** Ty McNutt, *APEI*  
Wayne Johnson, *Tennessee Tech University*

|                                                                                                                          |   |
|--------------------------------------------------------------------------------------------------------------------------|---|
| <b>SiC Power Devices Aspects for High Power Density and System Approach for a Successful Market Implementation</b> ..... | 1 |
| Peter Friedrichs, <i>Infineon Technologies AG, Germany</i>                                                               |   |

|                                                                                     |   |
|-------------------------------------------------------------------------------------|---|
| <b>Power Electronics Packaging Challenges for Future Warship Applications</b> ..... | 5 |
| Robert M. Cuzner, <i>University of Wisconsin-Milwaukee, United States</i>           |   |

|                                                                                                           |   |
|-----------------------------------------------------------------------------------------------------------|---|
| <b>A New Package of High-Voltage Cascode Gallium Nitride Device for High-Frequency Applications</b> ..... | 9 |
| Fred C. Lee, <i>CPES/Virginia Tech, United States</i>                                                     |   |
| Wenli Zhang, <i>CPES/Virginia Tech, United States</i>                                                     |   |
| Xiucheng Huang, <i>CPES/Virginia Tech, United States</i>                                                  |   |
| Zhengyang Liu, <i>CPES/Virginia Tech, United States</i>                                                   |   |
| Weijing Du, <i>CPES/Virginia Tech, United States</i>                                                      |   |
| Qiang Li, <i>CPES/Virginia Tech, United States</i>                                                        |   |

|                                                           |     |
|-----------------------------------------------------------|-----|
| <b>Industry Perspective</b> .....                         | n/a |
| Gary Skibinski, <i>Rockwell Automation, United States</i> |     |

## **Session A2L-A: Gate and Base Drives**

**May 4, 2015 10:30 - 12:30**

**Session Chairs:** Ben Blalock, *University of Tennessee*  
Peter Wilson, *University of Southampton*

|                                                                                 |    |
|---------------------------------------------------------------------------------|----|
| <b>Integrated Gate Drivers for e-Mode Very High Power GaN Transistors</b> ..... | 16 |
| John Roberts, <i>GaN Systems Inc., Canada</i>                                   |    |
| Julian Styles, <i>GaN Systems Inc., Canada</i>                                  |    |
| Di Chen, <i>GaN Systems Inc., Canada</i>                                        |    |

|                                                                                                     |    |
|-----------------------------------------------------------------------------------------------------|----|
| <b>Reliability-Oriented Design of Gate Driver for SiC Devices in Voltage Source Converter</b> ..... | 20 |
| Zheyu Zhang, <i>University of Tennessee, United States</i>                                          |    |
| Zhiqiang Wang, <i>University of Tennessee, United States</i>                                        |    |
| Fred Wang, <i>University of Tennessee, United States</i>                                            |    |
| Leon M. Tolbert, <i>University of Tennessee, United States</i>                                      |    |
| Benjamin J. Blalock, <i>University of Tennessee, United States</i>                                  |    |

|                                                          |    |
|----------------------------------------------------------|----|
| <b>SiC MOSFET Gate Drive Design Considerations</b> ..... | 24 |
| Julius Rice, <i>Cree Inc., United States</i>             |    |
| John Mookken, <i>Cree Inc., United States</i>            |    |

|                                                                                                                                                                                                                                                                                                                                |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Advanced Packaging Technologies for Fully Exploiting Attributes of WBG Power Electronics</b> .....                                                                                                                                                                                                                          | 28 |
| Zhenxian Liang, <i>Oak Ridge National Laboratory, United States</i>                                                                                                                                                                                                                                                            |    |
| <br><b>Session A3L-A: Special Session – Application Requirements of Wide Bandgap (WBG) Power Device Modules</b><br><b>May 4, 2015 14:00 - 15:00</b>                                                                                                                                                                            |    |
| <b>Session Chairs:</b> Krishna Shenai, <i>LoPel Corporation</i><br>Denny Stephens, <i>Continental</i>                                                                                                                                                                                                                          |    |
| <b>Wide Bandgap (WBG) Semiconductor Power Device Datasheets and Circuit Models</b> .....                                                                                                                                                                                                                                       | 32 |
| Krishna Shenai, <i>LoPel Corporation, United States</i>                                                                                                                                                                                                                                                                        |    |

| Frederic Voiron, <i>IPDiA, France</i><br>Ludovic Fourneaud, <i>IPDiA, France</i>                                                                                                                                                                                                                                               |    |

**Energy and Power Densities of Capacitors and Dielectrics** ..... 52

Doo-Hyun Choi, *Penn State University, United States*  
Clive Randall, *Penn State University, United States*  
Eugene Furman, *Penn State University, United States*  
Beihai Ma, *Argonne National Lab, United States*  
U. Balu Balachandran, *Argonne National Lab, United States*  
Shihai Zhang, *PolyK, State College, United States*  
Michael Lanagan, *Penn State University, United States*

**Energy Storage Utilizing Advanced CVD Nanodiamond Technology** ..... 56

Stephen E. Minden, *APEI, United States*  
John Fraley, *APEI, United States*  
Lauren Kegley, *APEI, United States*  
Jim Davidson, *International FemtoScience, United States*  
David Kerns, *International FemtoScience, United States*

**Session B2L-A: Power Modules and Semiconductor Devices**

**May 5, 2015 10:00 - 12:00**

**Session Chairs:** Ty McNutt, *APEI*  
Satoshi Tanimoto, *Nissan Motor Company*

**Compact and Optimized Solar Power Converter: Taking Another Step to Augment Solar Energy Efficiency** ..... 60

Yogesh Kumar, *Havells Pvt. Ltd., India*  
Sachin Beniwal, *University of Windsor, Canada*  
Shivender Dahiya, *University of Windsor, Canada*

**6.5 kV Si/SiC Hybrid Power Module: An Ideal Next Step?** ..... 64

Alex Q. Huang, *North Carolina State University, United States*  
Xiaoqing Song, *North Carolina State University, United States*  
Liqi Zhang, *North Carolina State University, United States*

**Influence of Si/SiC Device Selection on Losses and Magnetics Design in an Isolated DC-DC Converter** ..... 68

Minyu Cai, *Purdue University, United States*  
Liyao Wu, *Georgia Institute of Technology, United States*  
Dakshina Murthy-Bellur, *Cummins Power Generation, United States*  
Maryam Saeedifard, *Georgia Institute of Technology, United States*  
Oleg Wasynczuk, *Purdue University, United States*

**Development of Medium Voltage SiC Power Technology for Next Generation Power Electronics** ..... 72

Edward Van Brunt, *Cree, Inc., United States*  
David Grider, *Cree, Inc., United States*  
Vipindas Pala, *Cree, Inc., United States*  
Sei-Hyung Ryu, *Cree, Inc., United States*  
Jeff Casady, *Cree, Inc., United States*  
John Palmour, *Cree, Inc., United States*

## Session B3L-A: Modeling and CAD

May 5, 2015 13:30 - 16:30

Session Chairs: Alan Mantooth, *University of Arkansas*

Jerry Hudgins, *University of Nebraska*

### **A Carrier-Based Discontinuous Space Vector Modulation for Three-Level NPC Inverter** ..... 75

Chengzhu Piao, *Auburn University, United States*

John Y. Hung, *Auburn University, United States*

### **Chip-Level and Package-Level Thermal Constraints in Power Semiconductor Switch Modules** ..... 79

Krishna Shenai, *LoPel Corporation, United States*

### **Electromagnetic Interference Simulations of Power Electronic Modules** ..... 83

Atanu Dutta, *University of Arkansas, United States*

Simon S. Ang, *University of Arkansas, United States*

### **Behavioral Modeling for Stability in Multi-Chip Power Modules** ..... 87

Michael Mazzola, *Mississippi State University, United States*

Maryam Rahmani, *Mississippi State University, United States*

James Gafford, *Mississippi State University, United States*

Andrew Lemmon, *University of Alabama, United States*

Ryan Graves, *University of Alabama, United States*

### **Parasitic Extraction Procedure for Silicon Carbide Power Modules** ..... 91

Andrew Lemmon, *University of Alabama, United States*

Ryan Graves, *University of Alabama, United States*

### **Accurate Characterization of Switching Losses in High-Speed, High-Voltage Power MOSFETs** ..... 95

Alejandro Pozo Arribas, *Illinois Institute of Technology, United States*

Mahesh Krishnamurthy, *Illinois Institute of Technology, United States*

Krishna Shenai, *LoPel Corporation, United States*

## Session C1L-A: Packaging

May 6, 2015 8:00 - 10:30

Session Chairs: Simon Ang, *University of Arkansas*

Reinhold Bayerer, *Infineon*

### **A New Generation of Power Semiconductor Packaging Paves the Way for Higher Efficiency Power Conversion** ..... 99

Alex Lidow, *Efficient Power Conversion Corporation, United States*

David Reusch, *Efficient Power Conversion Corporation, United States*

|                                                                                                                                                       |                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Silver Sintered Double-Sided Cooling Power Package Process for Controlled Si Power Semiconductor Devices with Aluminum Top-Metallization .....</b> | <b>103</b>     |
| M. Barrière, <i>IMS Laboratory, France</i>                                                                                                            |                |
| S. Azzopardi, <i>IMS Laboratory, France</i>                                                                                                           |                |
| R. Roder, <i>IMS Laboratory, France</i>                                                                                                               |                |
| I. Favre, <i>IMS Laboratory, France</i>                                                                                                               |                |
| E. Woirgard, <i>IMS Laboratory, France</i>                                                                                                            |                |
| S. Bontemps, <i>Microsemi, France</i>                                                                                                                 |                |
| F. Le Henaff, <i>Alpha, United States</i>                                                                                                             |                |

**Development of a Board-Level Integrated Silicon Carbide MOSFET Power  
Module for High Temperature Application** ..... 123

Zhiqiang Wang, *The University of Tennessee, United States*  
Xiaojie Shi, *The University of Tennessee, United States*  
Leon M. Tolbert, *The University of Tennessee and Oak Ridge National Lab, United States*  
Fei (Fred) Wang, *The University of Tennessee, United States*  
Zhenxian Liang, *The University of Tennessee and Oak Ridge National Lab, United States*  
Daniel J. Costinett, *The University of Tennessee and Oak Ridge National Lab, United States*  
Benjamin J. Blalock, *The University of Tennessee, United States*

**Compact, High-Temperature, Single-Level Power Modules for 10 to 25 kV DC  
Link Voltages using Silicon Carbide Power Electronics** ..... 127

Chad B. O'Neal, *APEI, United States*  
Zach Cole, *APEI, United States*  
Jennifer Stabach, *APEI, United States*  
Greg Falling, *APEI, United States*  
Peter Killeen, *APEI, United States*  
Brandon Passmore, *APEI, United States*
