

2015 5th International Electric Drives Production Conference (EDPC 2015)

**Nuremberg, Germany
15 – 16 September 2015**

**IEEE Catalog Number: CFP1585P-POD
ISBN: 978-1-4673-7513-9**

Table of contents

1.	New Direct Winding Technologies	
1.1	Winding of Litz Wire on Single Teeth Rey D., Von Roll Schweiz AG, Breitenbach (CH)	N/A
1.2	Impact of the Needle Winding Technology on the Operational Behavior of an Asynchronous Machine Stenzel P., AUDI AG, Ingolstadt (DE).....	1
1.3	NeW - MARSILLI Needle Winding Platform: A Flexible and Configurable Solution for Low Volume, High Mix or Mass Production Kiefer D., Marsilli & Co. S.p.A., Castelleone(IT)	N/A
2.	Connection Processes of Electric Machines	
2.1	Evaluation of the Influence of Varying Electrode Materials Within the Thermo-Crimping Process Spreng S., University of Erlangen-Nuremberg (DE).....	9
2.2	Load-Adapted Design of Laser Welded Copper-Aluminum Connections for Power Electronics Hofmann K., Bayerisches Laserzentrum GmbH, Erlangen (DE).....	N/A
2.3	Developments in High Speed, High Quality, Precision Laser Stripping of Enamel Wire for Coil Winding Manufacturing Applications Dr. Dickinson P., Spectrum Technologies Plc, Bridgend (GB).....	N/A
3.	Quality Control in Electric Drives Production	
3.1	New Method of Quality Assurance for Laminated Cores Schneider M., University of Erlangen-Nuremberg (DE).....	15
3.2	Fully Automated Rotor Inspection Apparatus With High Flexibility for Permanent Magnet Synchronous Motors Using an Improved Hall Sensor Line Array Heyder A., University of Erlangen-Nuremberg (DE)	21
3.3	Electrical Testing of Rotors and Stators of Small Electrical Motors Scheer K., GDG Gerätebau, Sasbach (DE).....	N/A
4.	Innovative Winding Technologies	
4.1	Innovative Winding Method for Electric Motors for High Production Volumes of Electric Vehicles Stoeck M., ETH Zurich (CH).....	N/A
4.2	Hardware Guide Winding Zerbe J., Technische Universitaet Berlin (DE).....	26
4.3	Implementation of the Needle Winding Technique for Diamond Coils Bickel B., University of Erlangen-Nuremberg (DE).....	32

5.	Energy-Efficient Insulation Technologies	
5.1	Electrical Insulations System for Modern Power Trains Kuschnerus M., ELANTAS Beck GmbH, Hamburg (DE)	N/A
5.2	A Universal Analysis Tool for Process- and Energy-Optimization of Insulation Processes within the Production of Electric Drives Hofmann B., University of Erlangen-Nuremberg (DE).....	41
5.3	Impregnation of Hybrid and Electric Motors Induction Heating & Trickling: It is now Ready Technology Motta C., bdtronic GmbH, Weikersheim (DE).....	N/A
6.	Magnet Measurement Technologies	
6.1	New FPGA-Based and Inline-Capable Measuring Method for Identification of Magnetic Losses in Electrical Steel Veigel M., Karlsruhe Institute of Technology (DE).....	46
6.2	100% Inline Measurement of Permanent Magnets and PM Rotors Buettner U., Innovent e.V., Jena (DE).....	N/A
6.3	6D Magnetic Field Distribution Measurements of Permanent Magnets With Magnetic Field Camera Scanner Dr. Vervaeke K., Magcam NV, Leuven (BE).....	52
7.	Analysis of the Winding and Production Process	
7.1	Simulation of Orthocyclic Windings Using the Linear Winding Technique Boenig J., University of Erlangen-Nuremberg (DE)	56
7.2	Analysis of Wire Tension Control Principles and Algorithms for Highly Dynamic Applications Blanc F., Karlsruhe Institute of Technology (DE).....	62
7.3	Parameter Identification for Fault Analysis of Permanent Magnet Synchronous Motors Based on Transient Processes Wu C., Robert Bosch GmbH, Stuttgart (DE).....	N/A
8.	Insulation Technologies for Electric Drives	
8.1	Composite Materials in High Efficient Sleeve Applications of Electric Machines Dr. Funck R., CirComp GmbH, Kaiserslautern (DE).....	N/A
8.2	Benefits of Advanced Insulation Systems for High Performance Rotating Electrical Machines Bonnett J., Victrex Plc, Thornton Cleveleys (GB).....	N/A
8.3	New Thermosetting Resin Systems as Encapsulants for High Temperature Resistant, Robust and Cost Efficient Power Electronics and E-Drive Applications Dr. Hollstein W., Huntsman Advanced Materials GmbH, Basel (CH).....	N/A

9.	Optimized Magnet Assembly Processes	
9.1	Optimized Magnet Assembly Algorithms for Reduced Rotor Unbalance Peter M., Karlsruhe Institute of Technology (DE).....	70
9.2	Selective Assembly of Permanent Magnets for the Optimization of PMSM Meyer A., University of Erlangen-Nuremberg (DE).....	N/A
9.3	Challenging Aspects of Magnet Assemblies van der Linden H., Bakker Magnetics, Son (NL).....	N/A
10.	Validation of Packaging Technologies	
10.1	Influence of Punching Edges on the Self-Sensing Capabilities of Permanent Magnet Synchronous Machines with Different Rotor Topologies Quattrone F., Leibniz Universitaet Hannover (DE).....	75
10.2	Investigation of the Influence of Global Stresses and Strains on the Magnetic Properties of Electrical Steels with Varying Alloying Content and Grain Size Naumoski H., Daimler AG, Ulm (DE).....	79
10.3	Investigation on the Mechanical and Electromagnetical Performance of a Squirrel Cage Induction Machine with Radially Laser Welded End Ring Connections Wolf M., Wieland Werke AG, Ulm (DE).....	N/A
11.	Power Electronics and Control Methods	
11.1	Design and Implementation of a Novel Model Predictive Control Algorithm for Permanent Magnet Synchronous Machines Dr. Serpi A., University of Cagliari (IT).....	87
11.2	PWM Strategy for Common-Mode Voltage Reduction in Three-Phase Variable-Speed Drives with Active Front-End Dr. Videt A., University of Lille (FR).....	96
11.3	Pattern Recognition in Load Profiles of Electric Drives in Manufacturing Plants Reger A., Fraunhofer IPA, Bayreuth (DE).....	103
12.	Design of Electric Drives Production Systems	
12.1	Return on Engineering – Design to Cost for Electric Engine Production Kleine Buening M., RWTH Aachen University (DE).....	113
12.2	Worker Information Systems Using the Simulation Results of Physical Behavior for High-Voltage Harness Cables Fischer C., University of Erlangen-Nuremberg (DE).....	119
12.3	Economical Evaluation of a Modular Production System for Electric Traction Motors Sachs C., Fraunhofer Institute for Industrial Engineering IAO, Stuttgart (DE).....	126

13.	Properties and Processing of Electric Steel	
13.1	Rotary Cutting as an Alternative Method in the Processing of Electrical Steel Strip Hackert J., Vipem Hackert GmbH, Grünbach (DE).....	132
13.2	Different Topologies for Linear Switched Reluctance Motor With Segmental Translator Dr. Ganji B., University of Kashan (IR).....	N/A
13.3	Examination of Magnetic Properties of Non-Oriented Electrical Steels Using Ring-type Specimens Dr. Lee S., POSCO Technical Research Laboratories, Pohang (KR).....	N/A
14.	Computer Integrated Machine Designs	
14.1	The Value and Necessity of Using Environmental Direct Comparisons as a Simplified Life Cycle Assessment Method in Industrial Planning Processes Drechsel M., Audi Planung GmbH, Ingolstadt (DE).....	N/A
14.2	Numerical 2D Methodology for Synchronous Reluctance Motor Rotor Design Armentia S., Mondragon University (ES).....	137
14.3	Design of High Performance Induction Motor through Multi Objective and Multi Domain Optimization Ghosh S., Kirloskar Brothers Limited, Pune (IN).....	141
15.	Planning of Electric Drives Production Systems	
15.1	Influence of Production Uncertainties and Operational Conditions on Torque Characteristic of an Induction Machine von Pfingsten G., RWTH Aachen University (DE).....	N/A
15.2	Optimization of a Servo Motor Manufacturing by Use of „Industrie 4.0“ Abersfelder S., Bosch Rexroth GmbH, Lohr (DE).....	147
15.3	Industry 4.0 – Science Fiction or State of the Art ? Examples of Existing Machine Communication in Electronics Manufacturing Services Muegge M., Viscom AG, Hannover (DE).....	N/A
16.	German Research Funding Focus on Drives Production	
16.1	Effects of Twisted Windings on the Impedance of E-Traction Drives Vogt S., Technische Universitaet Muenchen (DE).....	152
16.2	Introducing ESKAM - Electrically Scalable Axle Module Braeunlich H., Fraunhofer IWU, Chemnitz (DE).....	N/A
16.3	Analysis of Wear Behavior of Stamping Tools in the Production of Electrical Steel Sheets Kraemer A., Karlsruhe Institute of Technology (DE).....	159

17.	Innovative Reluctance Machines	
17.1	A Comprehensive Survey on Thermal Analysis of Switched Reluctance Motors Ramesh R., SSN College of Engineering, Tamil Nadu (IN).....	N/A
17.2	Comparative Study Between Induction Motor and Synchronous Reluctance Motor for Electrical Railway Traction Applications Martínez de Pancorbo S., Mondragon University (ES).....	166
17.3	Synchronous Reluctance Motors With and Without Permanent Magnets for High Performance Low Cost Electrical Drives Dr. Serna Calvo E., Siemens AG, Bad Neustadt a.d. Saale (DE).....	171
18.	Control Methods and Design of Electric Machines	
18.1	Bonding Copper Terminals Onto DBC Substrates of Power Modules by Resistance Projection Welding Waltrich U., Fraunhofer IISB, Nuremberg (DE).....	N/A
18.2	Modeling and Power Flow Analysis of Cascaded Doubly-Fed Induction Machines Loehdefink P., Technische Hochschule Nuernberg (DE).....	178
18.3	Benchmark Test of a Compact and Low Cost Axial Flux Machine Using Soft Magnetic Composite and Hard Ferrite Sandner C., MiBa Sinter Austria GmbH, Vorchdorf (AT).....	N/A
19.	E-MOTIVE	
19.1	Innovations of Electromobility	
19.1.1.	Compact Machine Design of an Integrated Multiphase VPMSM Grosse T., RWTH Aachen University (DE).....	184
19.1.2.	The Societal Acceptance of Electro Mobility in Germany Prof. Muehlbaeck K., International School of Management, Munich (DE).....	190
19.1.3.	Gearless Electric Traction Systems for Commercial Vehicles and City Busses Dr. Klett S., Ziehl-Abegg Automotive, Kupferzell (DE).....	N/A
19.2	New Electric Traction Motor Concepts	
19.3.1	Integration of Electronic Power Components for Electromobility Groß S., Conti Temic microelectronic GmbH, Nuremberg (DE).....	197
19.3.2	Electrical Machine Design with Directly Cooled Laminated Fractional Pitch Windings Dr. Reinap A., Lund University (SE).....	N/A
19.3.3	Special Design and Manufacture Features for the Development of a Wound-Filed Synchronous Motor for Traction Applications Stuckmann C., MACCON GmbH, Munich (DE).....	N/A

20. E/TEV

20.1 Dynamic Power Transfer Applications

- 20.1.1. A Wireless EV / PHEV Charger With a New High Power Density Coil Design
Dr. Turki F., Vahle GmbH & Co.KG, Kamen (DE).....N/A
- 20.1.2. Design of a Beamed Power Transfer System for Feeding Electrical Vehicles
Prof. Takano T., Nihon University (JP).....N/A
- 20.1.3. Compact 7KW Inductive Charging System With Circular Coil Design
Dr. Schumann P., Robert Bosch GmbH, Stuttgart (DE).....202

20.2 Electronics for Wireless Power Transfer

- 20.2.1. The Energy-Pack APU-Replacement for Catenary Free Operation of Overhead Wired Busses
Prof. Haerri V., Lucerne University of Applied Sciences and Arts (CH)... N/A
- 20.2.2. Comparison of Magnetic Couplers for Inductive Electric Vehicle Charging Using Accurate Numerical Simulation and Statistical Methods
Knaisch K., Karlsruhe Institute of Technology (DE).....207

20.3 Broader Considerations for Wireless Power Transfer

- 20.3.1. Energy Transfer for Electric Traffic
Kurzveil T., TU Braunschweig (DE) 217

21. Postersession

- 21.1 A Novel Interior Permanent Synchronous Motor for a High End Ebike Drive Chain
Prof. Haerri V., Lucerne University of Applied Sciences and Arts (CH)...222
- 21.2 Torque Ripple Minimization of Reluctance Synchronous Machines by Continuous and Discrete Rotor Skewing
Hubert T., Technische Hochschule Nuernberg (DE)..... 228
- 21.3 Design of an Innovative Backlash Free Drive System for Rotation Tables
Koval L., Zentrum für Angewandte Forschung Ingolstadt (DE)..... 235
- 21.4 Innovative Developments for Automated Assembly and Fixation of Integrated Permanent Magnets in Rotors of Synchronous Machines
Mahr A., University of Erlangen-Nuremberg (DE).....239
