

# **2016 13th International Conference on Remote Engineering and Virtual Instrumentation (REV 2016)**

**Madrid, Spain  
24-26 February 2016**

**IEEE Catalog Number: CFP1649T-POD  
ISBN: 978-1-4673-8247-2**

## 2016 13th International Conference on Remote Engineering and Virtual Instrumentation (REV)

### Table of Contents

Title	Page range
Open Educational Resources and Competences related with Practices and Laboratories	1–2
New Experiences and Strategies in Remote Laboratories and apps for Electronics	3–3
The TATU Lab & Smart Education	4–4
Special Session: Reusable solutions for Remote Laboratories	5–6
An Inclined Plane Remote Lab	7–9
A PLC as an Industry 4.0 component	10–15
Key Aspects of Integrating Augmented Reality Tools into Peer-to-Peer Remote Laboratory User Interfaces	16–23
An FPGA-based Remote Laboratory: Implementing Semi-Automatic Experiments in the Hybrid Cloud	24–29
Extensive and repeatable experimentation in mobile communications with programmable instruments	30–36
The Remote Lab Cloud “goldi-labs.net”	37–42
Additional Specialty of a Technical Teacher for Engineers Acquired in Continuing Education at Tallinn University of Technology	43–47
Evolution of teaching tools and the learning process: from traditional teaching to edX courses	48–55
Overview of architectures with Arduino boards as building blocks for data acquisition and control systems	56–63
Flexible Technologies for Smart Campus	64–68
Deploying a novel Web-based Laboratory Using HTML5	69–73
Remote Experiments For Embedded Systems Reliability Studies	74–77
Automated Experiments on EjsS Laboratories	78–85
A new approach to conduct remote experimentation over embedded technologies	86–92
The Pupils' Academy of Serious Gaming: Strengthening Study Skills with ERPsim	93–102
Laboratories as a Service integrated into Learning Management Systems	103–108
Competency-based learning management systems Practices using remote laboratories to improve the use of the subjects and get required competences	109–111
Remote Laboratories for Electronics and New Steps in Learning Process Integration	112–117
Improving of positioning for measurements to control the operation and management of earth-moving and construction machinery	118–121
Development of a Cupping Test in Remote Laboratories for Engineering Education	122–126
A PROPOSED FRAMEWORK FOR AN ADAPTIVE LEARNING OF MASSIVE OPEN ONLINE COURSES(MOOCs)	127–132
The Evaluation of Remote Laboratories - Development and application of a holistic model for the evaluation of online remote laboratories in manufacturing	133–142
A new Model for a Remote Connection with Hardware Devices using Javascript	143–144

## 2016 13th International Conference on Remote Engineering and Virtual Instrumentation (REV)

### Table of Contents

Title	Page range
A Wireless Robotic Educational Platform approach	145–152
CS4VRU: remote monitoring and warning system for Vulnerable Road Users	153–158
WebLab-Deusto Microscope	159–162
Mobile Devices and Applications Enhancing Engineering Education in ESP	163–167
Cloud-based Remote Virtual Prototyping Environment for Embedded Control Applications	168–175
A Remote Lab for Teaching Mechanics	176–182
A distributed laboratory architecture for game-based learning in cybersecurity and critical infrastructures	183–185
Improving Mobile Communications Research and Education with UXM Wireless Test Set	186–189
Remote control and instrumentation of Android devices	190–195
An advanced Go-Lab scenario for the GUI-based analysis of large samples of particle physics data	196–201
An architecture for new models of Online Laboratories: educative multi-user gamified hybrid laboratories based on Virtual Environments	202–203
THE REMOTE EXPERIMENT COMPATIBILITY WITH INTERNET OF THINGS	204–207
Online Lab Infrastructure as a Service: A new Paradigm to Simplify the Development and Deployment of Online Labs	208–214
Augmented Reality Environment for Engineering Distance Learner in Acquiring Practical Skill	215–223
Classifying online laboratories: reality, simulation, user perception and potential overlaps	224–230
A customizable platform for remotely teaching & learning LVDTs The relevance of using the IEEE1451.0 Std. to facilitate its design and access	231–237
REMLABNET III – federated remote laboratory management system for university and secondary schools	238–241
Remote diagnostics of remote laboratory – on example of Joule’s experiment as a probe into microworld	242–245
MOOLs for MOOCs, a first edX scalable implementation	246–251
Using Augmented Reality Smart Glasses to Design Games for Cognitive Training	252–253
Prototype of the modern hands-on smart lab for automation engineering	254–259
Easy Creation and Deployment of Javascript Remote Labs with EjsS and Moodle	260–261
E-Learning Model for Teaching Programming Language for Secondary School Students in Indonesia	262–266
Use of Virtual and Pocket Labs in Education	267–268
ViPLab - an Online Programming Laboratory - Demo session	269–270
Virtual labs: a new tool in the Education	271–272
“Virtual” Algorithm Experimentation with Optimality	273–280

## 2016 13th International Conference on Remote Engineering and Virtual Instrumentation (REV)

### Table of Contents

Title	Page range
Remotely Analyze Spine Angle in Rehabilitation After Spine Surgery using Acceleration and Gyro Sensors	281–282
GOLDi – Grid of Online Lab Devices Ilmenau	283–284
Remote System for Measuring Geometric Tolerances: Roundness	285–286
The Mach-Zehnder Interferometer - A Smart Remote Experiment Based on a Software Template	287–292
Experiment Lab Server Architecture: a Web Services Approach to Supporting Interactive LabVIEW-based Remote Experiments under MIT's iLab Shared	293–305
Bringing Egyptology to the Classroom: Virtual Reconstruction of the TT 209 Site	306–310
Virtual environment for instrumented glove	311–312
A Tool for Grip Evaluation and Learning	313–314
Students' Perception of Implementing a Smart Learning System (SLS) based on Moodle at Fujairah College	315–318
Reusable Solutions for Embedded Systems' Design	319–323
The Game and Activity Environment of RALfie	324–325
Evaluation of remote experiments by different target groups, NeReLa project case study	326–331
Live Demo of two Experiments using a Remote Lab for Forming Technology	332–333
Augmented Reality for Cognitive and Social Skills Improvement in Children with ASD	334–335
Labicom Labs: Remote and Virtual Solid-State Laser Lab, RF&Microwave Amplifier Remote and Virtual Lab (Interactive demonstration of Labicom labs in winter	336–338
Remote laboratory for teaching of control systems design as an integrated system	339–346
Building Experiment System to Examine a Method for Supporting Verbal Explanation	347–349
Lab sessions in VISIR laboratories	350–352
A Raspberry PI Cluster and Geiger Counter Supporting Random Number Acquisition in the CS Operating Systems Class	353–354
Displacement measurements versus time using a remote Inclined Plane laboratory	355–356
Demonstration of a remote lab based on a vibrating beam apparatus	357–358
The Role of Online Labs in the European e-Science Infrastructure	359–365
Reshaping digital methodologies to the analog world	366–370
Turning the internet of (my) things into a remote controlled laboratory	371–374
Demonstrating Active Noise Control and Acoustics experiments using real test setup via the Internet	375–376
Work in Progress: Remote Experiment Control through Gesture Recognition	377–379
Remote framework for publishing distributed RCLs	380–384

## 2016 13th International Conference on Remote Engineering and Virtual Instrumentation (REV)

### Table of Contents

<b>Title</b>	<b>Page range</b>
Remote laboratories used in physics teaching: a state of the art	385–390
Practical Application of the Learning Mechanics–Game Mechanics (LM-GM) framework for Serious Games Analysis in Engineering Education	391–395
Overview of the first year of the L3-EOLES training	396–399
The TATU Lab & Smart Education	400–402
Simple modular system „iSES Remote Lab SDK“ for creation of remote experiments accessible from PC, tablets and mobile phones	403–405
Simple modular system „iSES Remote Lab SDK“ for creation of remote experiments accessible from PC, tablets and mobile phones	406–408
Remote Software Laboratories: Facilitating access to Engineering Softwares Online	409–413
Variable Interactivity with Dynamic Control Strategies in Remote Laboratory Experiments	414–422
Models of Remote Laboratories and Collaborative Roles for Learning Environments	423–429
Automated Checking of Matlab Script Functionality	430–434
Mobile Application for Remote Control of Thermo-Optical Plant	435–439
Teaching through inquiry on vocational training: The IES San Juan de la Rambla experience, using an Inquiry Learning Space (ILS) and the LXI-VISIR Deusto	440–443
