TABLE OF CONTENTS

GASOLINE PROCESSES.....	7
Introduction to Session	7
Introduction of Panelists	7
Safety	9
Question 1: When preparing reformer or isomerization vessels for maintenance, do you measure the benzene content of the unit? If so, what methods and locations are monitored and what criteria are used to establish safe levels for work to begin?	9
Question 1: Answer Book Response.....	9
Question 2: What are your Best Practices concerning the potential for flash fires in dust collectors and vent drums in a reformer's continuous catalyst regenerator when performing maintenance?.....	10
Question 2: Answer Book Response.....	10
Question 3: How have you developed integrity operating windows (IOWs) to follow American Petroleum Institute (API) Recommended Practice (RP) 584? How are the IOWs maintained and communicated to the operating staff?	10
Question 3: Answer Book Response.....	12
Conference Theme	13
Question 4: How will increased production of naphtha from light tight oil (LTO) and Tier 3 regulations affect the economics for alkylate and reformat production? Are there other options for processing light naphtha streams?	13
Question 4: Answer Book Responses	15
Question 5: Automobile manufacturers are considering requiring the use of higher octane fuels in order to meet a mandated increase in Corporate Average Fuel Economy (CAFE) standards. What strategies might you employ should demand for higher octane gasolines increase?.....	21
Question 5: Answer Book Responses	24
Question 6: Do LTOs contain higher concentrations of nitrogen? If so, how has this higher concentration effected gasoline processing units?	29
Question 6: Answer Book Response.....	29
Question 7: Recognizing that onstream factor is an important component of margin capture, what are the common areas of improvement for each of the gasoline processing units to reduce downtime or increase turnaround interval?	29
Question 7: Answer Book Responses	32
EPA Regulations	34

Question 8: How will the recently announced EPA regulations on emissions impact your refinery operation and specific technologies [FCC, hydroprocessing, coking, CDU/VDU (crude distillation unit/vacuum distillation unit), reforming, etc.]?	34
Question 8: Answer Book Response	35
Alkylation	36
Question 9: Is there a limit on the amount of time acid can remain stagnant in the reaction section of the alkylation unit? What adverse effects may occur if this limit is exceeded? What issues could arise on a restart from a stagnant-acid condition?	36
Question 9: Answer Book Response	37
Question 10: Where is carbonyl sulfide found in alkylation units? What effects can it have on the unit, and what are the prevalent management strategies?	37
Question 10: Answer Book Responses	39
Question 11: What operating variables lead to increases in organic fluorides in LPG product streams in a hydrofluoric (HF) acid alkylation unit? What operating variables lead to increases in organic sulfates in sulfuric acid alkylation units and where do these compounds concentrate?	40
Question 11: Answer Book Response	40
Question 12: What are your Best Practices for maintaining good reliability of pH analyzers in sulfuric acid alkylation service?	41
Question 12: Answer Book Response	42
Question 13: Is it a common or recommended practice for you to changeout all HF alkylation unit pump seals during turnarounds? What strategies do you employ to improve pump seal life in these services?	43
Question 13: Answer Book Responses	46
Sulfuric Acid Regeneration	47
Question 14: What do you consider when evaluating options for sulfuric acid regeneration? Comment on owned and operated facilities, onsite third-party, and offsite third-party operations.	47
Question 14: Answer Book Response	48
Mercaptan Removal	48
Question 15: What are your options for processing of disulfide oil from an extractive mercaptan removal unit? How will this oil affect a naphtha hydrotreater?	48
Question 15: Answer Book Response	51
Question 16: Do you plan to utilize a mercaptan removal unit in conjunction with a gasoline selective hydrotreater to meet Tier 3 gasoline sulfur requirements?	52
Question 16: Answer Book Response	55
Reforming	59

Question 17: What considerations should you make when contemplating changing catalyst supplier from the original unit licensor?	59
Question 17: Answer Book Response.....	62
Question 18: Due to lower product octane requirements, has your strategy for dumping and screening fixed-bed reforming catalyst changed from the standard recommendation of three years or three in-situ regenerations?	63
Question 18: Answer Book Response.....	63
Question 19: What is the maximum recommended nitrogen content of reformer feed for continuously regenerated units? What is its impact on chloride consumption and ammonium chloride generation?	64
Question 19: Answer Book Response.....	69
Question 20: What are common causes for platinum agglomeration and the catalyst of continuously regenerated reforming units, and what are the common solutions to address these issues?	70
Question 20: Answer Book Response.....	71
Question 21: What is the impact on unit performance when different qualities of hydrogen are used for the reduction step in a fixed-bed reforming unit?	72
Question 21: Answer Book Response.....	72
Question 22: How frequently do you change [or changeout?] the catalyst in reforming units? What are the appropriate economic criteria to evaluate?	73
Question 22: Answer Book Response.....	74
Question 23: In continuously regenerated reforming units, are there valves in cyclic service that have demonstrated superior performance compared to the originally installed valves? How can maintenance of these valves have an impact on their long-term performance and reliability?	75
Question 23: Answer Book Response.....	77
Question 24: During the oxidation step in the regeneration of fixed-bed catalytic reformers, how does varying the length and oxygen concentration affect the unit performance?	78
Question 24: Answer Book Response.....	79
Isomerization.....	79
Question 25: Have you detected any hydrogen chloride slip in the stabilizer bottoms for any gasoline units (isomerization or reformer)? What are your Best Practices to prevent downstream unit corrosion?	79
Question 25: Answer Book Response.....	80
Question 26: What is your Best Practice for packing (material and shape) in isomerization unit off gas caustic scrubbers?	81
Question 26: Answer Book Response.....	82

Question 27: What is your experience with processing benzene in C5/C6 isomerization units? Have there been any issues with higher reactor exotherms associated with benzene saturation?	82
Question 27: Answer Book Response.....	82
Chlorides	83
Question 28: What are your Best Practices for measuring chlorides in LPG streams? What criteria do you use to determine when to change LPG chloride treater media?	83
Question 28: Answer Book Responses	85
Closing Remarks	87
