# 2016 6th Workshop on Irregular Applications: Architecture and Algorithms

## IA3 2016

### Table of Contents

|                   |     |
|-------------------|-----|
| Foreword.....     | v   |
| Organization..... | vii |

---

#### Keynote

|                                                                                                                    |   |
|--------------------------------------------------------------------------------------------------------------------|---|
| High Level Abstractions and Automatic Optimization Techniques for<br>the Programming of Irregular Algorithms ..... | 1 |
| <i>David Padua</i>                                                                                                 |   |

#### Full Papers

|                                                                                                                                                                                                                                                                                        |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Highly Scalable Near Memory Processing with Migrating Threads on the Emu<br>System Architecture .....                                                                                                                                                                                  | 2  |
| <i>Timothy Dysart, Peter Kogge, Martin Deneroff, Eric Bovell, Preston Briggs,<br/>Jay Brockman, Kenneth Jacobsen, Yujen Juan, Shannon Kuntz,<br/>Richard Lethin, Janice McMahon, Chandra Pawar, Martin Perrigo,<br/>Sarah Rucker, John Ruttenberg, Max Ruttenberg, and Steve Stein</i> |    |
| Parallel Interval Stabbing on the Automata Processor .....                                                                                                                                                                                                                             | 10 |
| <i>Indranil Roy, Ankit Srivastava, Matt Grimm, and Srinivas Aluru</i>                                                                                                                                                                                                                  |    |
| An Optimized Multicolor Point-Implicit Solver for Unstructured Grid<br>Applications on Graphics Processing Units .....                                                                                                                                                                 | 18 |
| <i>Mohammad Zubair, Eric Nielsen, Justin Luitjens, and Dana Hammond</i>                                                                                                                                                                                                                |    |
| Optimizing Sparse Tensor Times Matrix on Multi-core and Many-Core<br>Architectures .....                                                                                                                                                                                               | 26 |
| <i>Jiajia Li, Yuchen Ma, Chenggang Yan, and Richard Vuduc</i>                                                                                                                                                                                                                          |    |
| Compiler Transformation to Generate Hybrid Sparse Computations .....                                                                                                                                                                                                                   | 34 |
| <i>Huihui Zhang, Anand Venkat, and Mary Hall</i>                                                                                                                                                                                                                                       |    |
| An OpenCL Framework for Distributed Apps on a Multidimensional Network<br>of FPGAs .....                                                                                                                                                                                               | 42 |
| <i>Abhijeet Lawande, Alan D. George, and Herman Lam</i>                                                                                                                                                                                                                                |    |

## Short Papers

|                                                                                                                                     |    |
|-------------------------------------------------------------------------------------------------------------------------------------|----|
| Fast Parallel Cosine K-Nearest Neighbor Graph Construction .....                                                                    | 50 |
| <i>David C. Anastasiu and George Karypis</i>                                                                                        |    |
| Performance Evaluation of Parallel Sparse Tensor Decomposition<br>Implementations .....                                             | 54 |
| <i>Thomas B. Rolinger, Tyler A. Simon, and Christopher D. Krieger</i>                                                               |    |
| Implementation and Evaluation of Data-Compression Algorithms<br>for Irregular-Grid Iterative Methods on the PEZY-SC Processor ..... | 58 |
| <i>Naoki Yoshifuji, Ryo Sakamoto, Keigo Nitadori, and Jun Makino</i>                                                                |    |
| Dynamic Load Balancing for High-Performance Graph Processing on Hybrid<br>CPU-GPU Platforms .....                                   | 62 |
| <i>Stijn Heldens, Ana Lucia Varbanescu, and Alexandru Iosup</i>                                                                     |    |
| A Fast Level-Set Segmentation Algorithm for Image Processing Designed For<br>Parallel Architectures .....                           | 66 |
| <i>Julian Gutierrez, Fanny Nina-Paravecino, and David Kaeli</i>                                                                     |    |
| HISC/R: An Efficient Hypersparse-Matrix Storage Format for Scalable Graph<br>Processing .....                                       | 70 |
| <i>Robert Kirchgessner, Giovanni De La Torre, Alan D. George, and Vitaliy Gleyzer</i>                                               |    |
| Optimized Distributed Work-Stealing .....                                                                                           | 74 |
| <i>Vivek Kumar, Karthik Murthy, Vivek Sarkar, and Yili Zheng</i>                                                                    |    |
| Fine-Grained Parallelism in Probabilistic Parsing with Habanero Java .....                                                          | 78 |
| <i>Matthew Francis-Landau, Bing Xue, Jason Eisner, and Vivek Sarkar</i>                                                             |    |
| <b>Author Index</b> .....                                                                                                           | 82 |
