Tuesday, June 5, 2018

16:00 – 18:00	Conference Check-in (Executive Room)
18:00 – 19:00	<u>PLENARY</u> Microfabrication of elastomeric polymers for organ-on-a-chip engineering and injectable tissues1 Milica Radisic, University of Toronto, Canada
19:00 – 20:00	Opening Reception (Seas Lounge)
20:00 – 21:30	Dinner
21:30 – 22:30	Poster Session / Social Hour

NOTES

- *Technical Sessions will be held in the Balaia Room.*
- *Poster Sessions will be in the Santa Eulália Room.*
- *The ECI office will be the Executive Room.*
- *Dinner on Thursday is “on your own.”*
- *Audio, still photo and video recording by any device (e.g., cameras, cell phones, laptops, PDAs, watches) is strictly prohibited during the technical sessions, unless the author and ECI have granted prior permission.*
- *Speakers – Please have your presentation loaded onto the conference computer prior to the session start (preferably the day before). Shengxi Wu will be assisting speakers in loading their presentations.*
- *Speakers – Please leave discussion time as previously directed by your session chair.*
- *Please do not smoke at any conference functions.*
- *Turn your mobile telephones to vibrate or off during technical sessions.*
- *Please write your name on your program so that it can be returned to you if lost or misplaced.*
- *After the conference, ECI will send an updated participant list to all participants. Please check your listing now and if it needs updating, you may correct it at any time by logging into your ECI account.*

Wednesday, June 6, 2018

07:00 – 09:00 Breakfast buffet

Session 1: Design Advances in Nanomaterials and Nanotheranostics

Session Chair: Victor Shahin, University of Muenster, Germany

Nanomaterials and nanotheranostics are an attractive option for the diagnosis and treatment of a number of serious diseases, as these constructs allow enhanced control over localization and cargo release. This session will focus on the current state of the art for development of nanoconstructs for use as diagnostics and therapeutics in human diseases, with emphasis on nanotechnologies that address key limitations in current clinical approaches.

09:15 – 09:55

KEYNOTE

Genetically encoded polymers for drug delivery2

Ashutosh Chilkoti, Duke University, USA

09:55 – 10:15

Immobilization of biologic photosensitizer conjugates on nanoparticles to enhance photoimmunotherapy efficacy3

Huang-Chiao Huang, University of Maryland, USA

10:15 – 10:35

Photothermal therapy generates a thermal window of immunogenic cell death in neuroblastoma4

Rohan Fernandes, George Washington University, USA

10:35 – 11:05

Coffee break

11:05 – 11:25

Synthetic cells synthesize therapeutic proteins inside tumors5

Nitzan Krinsky, Technion, Israel

11:25 – 11:45

Soft tissue approximation and repair using Laser-activated nanomaterials6

Kaushal Rege, Arizona State University, USA

11:45 – 12:05

New physical and chemical approaches for the cytosolic delivery of bio-therapeutics and nanoparticles into cells7

Stefaan De Smedt, Ghent University, Belgium

12:05 – 12:25

Histidylated nanovectors for mRNA vaccine formulation: Induction of a strong anti-tumor T cell immunity combined with inflammatory state8

Chantal Pichon, Center for Molecular Biophysics-CNRS, France

12:25 – 12:45

Polymer-nanoparticle interactions in supramolecular hydrogels: Enabling long-term antibody delivery9

Anthony Yu, Stanford University, USA

12:45 – 14:30

Lunch

Wednesday, June 6, 2018 (continued)

Session 2: Materials/Biology Interface

Session Chairs: Christopher Jewell, University of Maryland, USA
Moein Moghimi, Newcastle University, UK

The clinical translation of new nanotechnologies, biomaterials, combination products, and/or microdevices ultimately relies upon the complex series of interactions that these materials experience upon introduction into the human body. The integrated responses span multiple tissue/organ systems, as well as the immune system, ultimately governing therapeutic and/or diagnostic outcomes. This session will focus on approaches to understand and modulate systemic multi-organ/multi-tissue responses, as well as systemic and localized immune responses, including strategies to actively alter the immune interface through novel immunoengineering technologies.

- 14:30 – 15:10 **KEYNOTE**
Nanomedicines for the treatment of autoimmune inflammation: engineering design, mechanisms and diseases10
Pere Santamaria, University of Calgary, Canada
- 15:10 – 15:30 **Tolerance induction with quantum dots displaying tunable densities of self-antigen11**
Kryстина Hess, University of Maryland, USA
- 15:30 – 15:50 **Chimeric protein and nano-construct for tissue-retained enzyme to locally suppress inflammation12**
Benjamin Keselowsky, University of Florida, USA
- 15:50 – 16:20 Coffee break
- 16:20 – 16:40 **Precision polymer architectures and molecular conjugates to enable therapeutics against undruggable targets13**
Craig Duvall, Vanderbilt University, USA
- 16:40 – 17:00 **Sustained release vaccine platforms for enhanced humoral immunity14**
Gillie Agmon, Stanford University, USA
- 17:00 – 17:20 **Differential uptake of non-fouling particles by primary human neutrophils15**
William Kelley, University of Michigan, USA
- 18:00 – 19:30 Poster Session / Social Hour
- 19:30 – 21:00 Dinner

Thursday, June 7, 2018

07:00 – 09:00 Breakfast buffet

Session 3: In Vitro Microfluidics and Physiological Assays

Session Chair: Netanel Korin, Technion, Israel

The unique physical phenomena inherent in microscale fluid flows can be leveraged in a variety of applications in biology ranging from new approaches for device fabrication to new techniques for sensing flow characteristics. These features have spurred enormous interest in development of microsystems that are able to mimic, manipulate, and/or interrogate biological systems at tiny length scales, lending new insights into cell biology and human physiology. This session will investigate cutting edge topics in the development and application of microscale phenomena towards creation of new devices and systems in biomedicine.

09:15 – 09:35 **Combinatorial nanoconstructs for biomedical imaging and drug delivery16**
Paolo Decuzzi, IIT, Italy

09:35 – 09:55 **Evaluating the impact of perfusion on nanomaterial uptake rates and cytotoxicity using microfluidic in vitro & in silico cell cultures systems17**
Peter Ertl, Technical University of Vienna, Austria

09:55 – 10:15 **Tissue microprocessing: shaping sub-nanoliter volumes of liquids on tissue sections for multi-modal analysisN/A**
Govind Kaigala, IBM Zurich, Switzerland

10:15 – 10:35 **Generation, detection and applications of in vitro oxygen gradients18**
Nitin Agarwal, George Mason University, USA

10:35 – 11:05 Coffee break

11:05 – 11:45 **KEYNOTE**
A model for the blood-brain barrier and its application in modeling metastasis to the brain19
Roger Kamm, Massachusetts Institute of Technology, USA

11:45 – 12:05 **Acoustic enhancement of intracellular delivery for ex vivo therapeutics20**
Leslie Yeo, RMIT University, Australia

12:05 – 12:25 **Microphysiological models of human skin and brain vasculature for drug testing21**
Hasan Abaci, Columbia University, USA

12:35 Boxed lunch and excursion
(Guided tour of Faro followed by catamaran to the Natural Park of the Ria Formosa)

18:30 Return to hotel

19:00 Dinner on your own

Friday, June 8, 2018

07:00 – 09:00

Breakfast buffet

Session 4: Cellular Niche: Models and Mechanisms

Session Chairs: April Kloxin, University of Delaware, USA
Angela Pannier, University of Nebraska, USA

Cells respond to a dynamic series of signals stemming from their interactions with the local extracellular environment, including the chemical/mechanical/physical properties of the extracellular matrix (ECM) (e.g., density and three-dimensional arrangement of cell adhesive ligands; composition; modulus; topology); the presence/proximity of other cells; the composition/concentration of soluble signaling molecules; and the presence/availability of nutrients. This session will focus on the design, construction, and application of integrated models able to capture these features of the cellular microenvironment to enable new insights and new therapeutic approaches relevant to nanotechnology application as well as tissue regeneration and disease.

09:15 – 09:55

KEYNOTE

Biomaterialized materials as bone ECM mimetics: From understanding molecular mechanisms to new therapeutic interventions22

Shyni Varghese, Duke University, USA

09:55 – 10:15

Decoding mechanism that regulate re-epithelialization23

Pamela Kreeger, University of Wisconsin, USA

10:15 – 10:35

Spatial patterning of liver progenitor cell differentiation mediated by cell contractility and notch signaling24

Gregory Underhill, University of Illinois, USA

10:35 – 11:05

Coffee break

11:05 – 11:25

Lipid targets in prevention of clotting: Translating in vitro concepts to in vivo application25

Michael Holinstat, University of Michigan, USA

11:25 – 11:45

Tissue Guided Hydrogel Design.....26

Shelly Peyton, University of Massachusetts, USA

11:45 – 12:05

Synthetic building block for hierarchical tissue engineering27

Laura De Laporte, DWI-Leibniz Institute for Interactive Materials, Germany

12:05 – 12:25

Scalable and physiologically relevant microenvironments for human pluripotent stem cell expansion and differentiation28

Yuguo Lei, University of Nebraska, USA

12:30 – 14:30

Lunch

14:30 - 16:00

Session 5: Industry Session & Hands-on Demo

Session Chair: Maximilien Guerin, Fluigent, France

19:00 – 20:00

PLENARY

New strategies for enhancing tumor immunotherapy by exploiting the tumor microenvironmentN/A

Melody Swartz, University of Chicago, USA

20:00 – 22:00

Conference Dinner and Poster Awards

Saturday, June 9, 2018

07:00 – 09:00

Breakfast buffet

Departures

Poster Presentations

1. **Mechanisms of enhanced non-viral gene delivery to human mesenchymal stem cells induced by glucocorticoid priming29**
Angela K. Pannier, University of Nebraska-Lincoln, USA
2. **Use of a three-dimensional in vitro alginate hydrogel culture model to direct zonal formation of growth plate cartilage30**
Angela K. Pannier, University of Nebraska-Lincoln, USA
3. **Designing and utilizing synthetic extracellular matrices to probe breast cancer cell activation in response to microenvironment cuesN/A**
April M. Kloxin, University of Delaware, USA
4. **Microfluidic acini-on-chip platforms as a tool to study bacterial lung exposure31**
Josue Sznitman, Technion – Israel Institute of Technology, Israel
5. **Tropoelastin coated PLLA-PLGA scaffolds promote vascular network formation32**
Ariel A. Szklanny, Technion – Israel Institute of Technology, Israel
6. **Engineered nanotherapeutics for pulmonary aerosol delivery33**
Catherine Fromen, University of Delaware, USA
7. **Modular control of innate immune signaling using self-assembly of immune signals34**
Christopher Jewell, University of Maryland, USA
8. **A microfluidic platform with permeable walls for the analysis of vascular and extravascular mass transport35**
Hilaria Mollica, Italian Institute of Technology, Italy
9. **Targeted drug delivery in arterial stenosis - role of hemodynamics36**
Moran Levi, Technion – Israel Institute of Technology, Israel
10. **Study cellular responses at the microscale by creating heterogeneity in cultured cells using a microfluidic probe37**
Nadia Enriquez Casimiro, IBM Research - Zurich, Switzerland
11. **Synthetic cells synthesize therapeutic proteins inside tumors38**
Nitzan Krinsky, Technion – Israel Institute of Technology, Israel
12. **Controlled EGFR ligand display for tunable targeted intracellular delivery of cancer suicide enzymes39**
Rachel Lieser, University of Delaware, USA
13. **Development of a collagen-based scaffold for sequential delivery of antimicrobial agents and pdgf genes to chronic wounds40**
Raj Kumar Thapa, University of Delaware, USA
14. **Synthesis of zwitterionic-functionalized conjugated nanoparticles for targeted drug delivery applications41**
Renato Auriemma, Politecnico di Milano, Italy
15. **True-scale biomimetic multi-generation airway platforms of the human bronchial epithelium for in vitro cytotoxicity screening42**
Shani Elias-Kirma, Technion – Israel Institute of Technology, Israel

16. **Polyester-based excipients to formulate lipophilic drugs into nanoparticles directly at the bed of the patient43**
Umberto Capasso Palmiero, Politecnico di Milano, Italy
17. **Adhesion kinetics of functionalized nano-particles under high shear conditions44**
Yathreb Asaad, Technion – Israel Institute of Technology, Israel
18. **Tolerance induction with quantum dots displaying tunable densities of self-antigen45**
Krystina Hess, University of Maryland, USA
19. **Sustained release vaccine platforms for enhanced humoral immunity46**
Gillie Agmon, Stanford University, USA
