## Table of Contents

|                                          |  |
|------------------------------------------|--|
| Message from the General Chair .xix..... |  |
| Message from the Program Chairs .xx..... |  |
| DSD 2018 Committees .xxii.....           |  |
| DSD 2018 Program Committee .xxiii.....   |  |
| Additional Reviewers .xxxiv.....         |  |

## Main

## Memory

|                                                                                                                                                                                                                                                                   |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Memory Aware Packet Matching Architecture for High-Speed Networks .1.....                                                                                                                                                                                         |  |
| <i>Michal Kekely (FIT BUT), Lukas Kekely (CESNET, a. l. e.), and Jan Korenek (IT4Innovations Centre of Excellence, FIT BUT)</i>                                                                                                                                   |  |
| Real-Time Emulation of Multiple NAND Flash Channels by Exploiting the DRAM Memory of High-end Servers .9.....                                                                                                                                                     |  |
| <i>Nikolaos Toulgaridis (University of Patras), Eleni Bougioukou (University of Patras), and Theodore Antonakopoulos (University of Patras)</i>                                                                                                                   |  |
| High-Speed Configuration Strategy for Configurable Logic Block-Based TCAM Architecture on FPGA .16.....                                                                                                                                                           |  |
| <i>Inayat Ullah (Chosun University, Gwangju, South Korea), Umar Afzaal (Chosun University, Gwangju, South Korea), Zahid Ullah (CECOS University of IT &amp; Emerging Sciences, Peshawar, Pakistan), and Jeong-A Lee (Chosun University, Gwangju, South Korea)</i> |  |

## Architecture/Arithmetics/Computing

|                                                                                                                                                                                            |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Architectural Exploration of Function Computation Based on Cubic Polynomial Interpolation with Application in Deep Neural Networks .22.....                                                |  |
| <i>Shen-Fu Hsiao (National Sun Yat-Sen University), Yu-Chang Chen (National Sun Yat-Sen University), and Hsiang-Hao Liang (Synopsys Taiwan Co.)</i>                                        |  |
| Measurement Based Execution Time Analysis of GPGPU Programs via SE+GA .30.....                                                                                                             |  |
| <i>Adrian Horga (Linköping University), Sudipta Chattopadhyay (Singapore University of Technology and Design), Petru Eles (Linköping University), and Zebo Peng (Linköping University)</i> |  |

|                                                                                        |                                                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Heavy-Hitter Detection Using a Hardware Sketch with the Countmin-CU Algorithm .38..... | Antonio Saavedra ( <i>Universidad de Concepcion</i> ), Cecilia Hernández ( <i>Universidad de Concepcion, and Center of Biotechnology and Bioengineering (CeBiB)</i> ), and Miguel Figueroa ( <i>Universidad de Concepcion</i> )                                                       |
| A Novel Hardware-Accelerated Priority Queue for Real-Time Systems .46.....             | Lukáš Kohutka ( <i>Slovak University of Technology in Bratislava</i> ), Lukáš Nagy ( <i>Slovak University of Technology in Bratislava</i> ), and Viera Stopjaková ( <i>Slovak University of Technology in Bratislava</i> )                                                            |
| Datawidth-Aware Energy-Efficient Multipliers: A Case for Going Sign Magnitude .54..... | Luc Waeijen ( <i>Eindhoven University of Technology</i> ), Hailong Jiao ( <i>Eindhoven University of Technology</i> ), Henk Corporaal ( <i>Eindhoven University of Technology</i> ), and Yifan He ( <i>Eindhoven University of Technology &amp; Xiamen University of Technology</i> ) |

## Chip Design

|                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Trends in On-chip Dynamic Resource Management .62.....                                                   | Kasra Moazzemi ( <i>University of California, Irvine</i> ), Anil Kanduri ( <i>University of Turku, Finland</i> ), Dávid Juhász ( <i>Vienna University of Technology, Austria. Imsys AB, Stockholm, Sweden</i> ), Antonio Miele ( <i>Politecnico di Milano, Italy</i> ), Amir M. Rahmani ( <i>University of California, Irvine. Technische Universität Wien, Austria</i> ), Pasi Liljeberg ( <i>University of Turku, Finland</i> ), Axel Jantsch ( <i>Vienna University of Technology, Austria</i> ), and Nikil Dutt ( <i>University of California, Irvine</i> ) |
| FPGA Placement Improvement Using a Genetic Algorithm and the Routing Algorithm as a Cost Function .70... | Francisco Javier Veredas ( <i>Universidad Nacional de Educacion a Distancia</i> ) and Enrique J. Carmona ( <i>Universidad Nacional de Educacion a Distancia</i> )                                                                                                                                                                                                                                                                                                                                                                                               |
| Fault-Tolerant Deployment of Dataflow Applications Using Virtual Processors .77.....                     | Reinier van Kampenhout ( <i>Eindhoven University of Technology</i> ), Sander Stuijk ( <i>Eindhoven University of Technology</i> ), and Kees Goossens ( <i>Eindhoven University of Technology, Topic Embedded Products</i> )                                                                                                                                                                                                                                                                                                                                     |
| Novel Feature Vectors Considering Distances between Wires for Lithography Hotspot Detection .85.....     | Gaku Kataoka ( <i>Hiroshima City University</i> ), Masato Inagi ( <i>Hiroshima City University</i> ), Shinobu Nagayama ( <i>Hiroshima City University</i> ), and Shin'ichi Wakabayashi ( <i>Hiroshima City University</i> )                                                                                                                                                                                                                                                                                                                                     |

## Image Processing/Coding

|                                                                                           |                                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Multimodal Image Registration between SWIR and LWIR Images in an Embedded System .91..... | Javier Cárdenas ( <i>Universidad de Concepcion</i> ) and Miguel Figueroa ( <i>Universidad de Concepcion</i> )                                                                          |
| A Reconfigurable Fractional Interpolation Hardware for VVC Motion Compensation .99.....   | Hasan Azgin ( <i>Sabanci University</i> ), Ahmet Can Mert ( <i>Sabanci University</i> ), Ercan Kalali ( <i>Sabanci University</i> ), and Ilker Hamzaoglu ( <i>Sabanci University</i> ) |

|                                                                                                                                                                                                                             |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Memory-Centric Flooded LDPC Decoder Architecture Using Non-surjective Finite Alphabet Iterative Decoding .104.....                                                                                                          |  |
| <i>Oana Boncalo (University Politehnica Timisoara), Alexandru Amarica (University Politehnica Timisoara), and Sergiu Nimara (University Politehnica Timisoara)</i>                                                          |  |
| High-Throughput One-Channel RS(255,239) Decoder .110.....                                                                                                                                                                   |  |
| <i>Gabriele Perrone (ABB SACE), Javier Valls (Universitat Politecnica de Valencia), Vicente Torres (Universitat Politecnica de Valencia), and Francisco Miguel García-Herrero (European University Miguel de Cervantes)</i> |  |

## Simulation/Modeling/Education

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

## Main Posters

- Flexible and Resource Efficient FPGA-Based Quad Data Rate Memory Interface Design for High-Speed Data Acquisition Systems .155.....  
*Nizam Ayyildiz (ASELSAN Inc.)*
- Design and Implementation of an HCI Based Peer to Peer APDU Protocol .159.....  
*Lukas Gressl (ITI TU Graz), Ulrich Neffe (NXP Semiconductors Austria GmbH), and Christian Steger (ITI TU Graz)*
- Visualization of Memory Map Information in Embedded System Design .163.....  
*Mikko Teuho (Tampere University of Technology), Esko Pekkarinen (Tampere University of Technology), and Timo Hämäläinen (Tampere University of Technology)*
- A Versatile PCM-Based Circuits Emulator and Its Use on Implementing Linear Algebra Functions .167.....  
*Anastasios Petropoulos (University of Patras) and Theodore Antonakopoulos (University of Patras)*
- Embedded Operating System Optimization through Floating to Fixed Point Compiler Transformation .172.....  
*Daniele Cattaneo (Politecnico di Milano), Antonio Di Bello (Politecnico di Milano), Stefano Cherubin (Politecnico di Milano), Federico Terraneo (Politecnico di Milano), and Giovanni Agosta (Politecnico di Milano)*
- Attack Surface Modeling and Assessment for Penetration Testing of IoT System Designs .177.....  
*Yasamin Mahmoodi (FZI Forschungszentrum Informatik), Sebastian Reiter (FZI Forschungszentrum Informatik), Alexander Viehl (FZI Forschungszentrum Informatik), Oliver Bringmann (Universität Tübingen), and Wolfgang Rosenstiel (Universität Tübingen)*

## DTFT: Dependability, Testing and Fault Tolerance in Digital Systems

- DUSTER: DUal Source Write TERmination Method for STT-RAM Memories .182.....  
*Saeed S. Faraji (Amirkabir University of Technology (Tehran Polytechnic)), Javad Talafy (Amirkabir University of Technology (Tehran Polytechnic)), Amir M. Hajisadeghi (Amirkabir University of Technology (Tehran Polytechnic)), and Hamid R. Zarandi (Amirkabir University of Technology (Tehran Polytechnic))*
- Error Correctable Approximate Multiplier with Area/Power Efficient Design Through Mixed CMOS/PTL .190.....  
*Tooba Arifeen (Chosun University), Abdus Sami Hassan (Chosun University), and Jeong A Lee (Chosun University)*
- Effect of FPGA Circuit Implementation on Error Detection Using Logic Implication Checking .196.....  
*Umar Afzaal (Chosun University), Abdus Sami Hassan (Chosun University), Tooba Arifeen (Chosun University), and Jeong A Lee (Chosun University)*
- D-SET Mitigation Using Common Clock Tree Insertion Techniques for Triple-Clock TMR Flip-Flop .201.....  
*Oliver Schrape (IHP), Anselm Breitenreiter (IHP), Marko Andjelkovic (IHP), and Milos Krstic (IHP)*

Segmentation of Hyperspectral Images Using Quantized Convolutional Neural Networks .260.....  
*Pablo Ribalta (Silesian University of Technology), Michal Marcinkiewicz (KP Labs), and Jakub Nalepa (Silesian University of Technology)*

Design of a Low-Level Radar and Time-of-Flight Sensor Fusion Framework .268.....  
*Josef Steinbaeck (Infineon Technologies Austria AG), Christian Steger (Graz University of Technology), Gerald Holweg (Infineon Technologies Austria AG), and Norbert Druml (Infineon Technologies Austria AG)*

## ASAASIT Poster

Design and Implementation of Low-Cost LK Optical Flow Computation for Images of Single and Multiple Levels .276.....  
*Shen-Fu Hsiao (National Sun Yat-Sen University) and Chen-Yen Tsai (National Sun Yat-Sen University)*

## DCPS: Design of Cyber-Physical Systems

Intelligent Security Measures for Smart Cyber Physical Systems .280.....  
*Muhammad Shafique (Institute of Computer Engineering, Vienna University of Technology (TU Wien), Austria), Faiq Khalid (Institute of Computer Engineering, Vienna University of Technology (TU Wien), Austria), and Semeen Rehman (Institute of Computer Technology, Vienna University of Technology (TU Wien), Austria)*

Designing Energy Efficient Approximate Multipliers for Neural Acceleration .288.....  
*Sayandip De (Eindhoven University of Technology), Jos Huisken (Eindhoven University of Technology), and Henk Corporaal (Eindhoven University of Technology)*

Resource-Aware Decentralization of a UKF-Based Cooperative Localization for Networked Mobile Robots .296  
*Seyyed Ahmad Razavi (University of California, Irvine), Eli Bozorgzadeh (University of California, Irvine), Kanghee Kim (Soongsil University, Seoul, Korea), and Solmaz Kia (University of California, Irvine)*

Design Optimization of Cyber-Physical Systems by Partitioning and Coordination: A Study on Mechatronic Systems .304.....  
*Pouya Mahdavi-pour Vahdati (KTH Royal Institute of Technology)*

Stability Verification of Self-Timed Control Systems Using Model-Checking .312.....  
*Viktorio Semir el Hakim (University of Twente) and Marco Jan Gerret Bekooij (University of Twente, NXP Semiconductors)*

Optimising Quality-of-Control for Data-Intensive Multiprocessor Image-Based Control Systems Considering Workload Variations .320.....  
*Sajid Mohamed (Eindhoven University of Technology), Diqing Zhu (Eindhoven University of Technology), Dip Goswami (Eindhoven University of Technology), and Twan Basten (Eindhoven University of Technology; ESI, TNO)*

|                                                                                                                                                                                                                             |  |

| Identity and Access Management with Blockchain in Electronic Healthcare Records .699.....    | <i>Tomas Mikula (Aarhus University, Denmark) and Rune Hylsberg Jacobsen (Aarhus University, Denmark)</i>                                                              |

## SDCIS Poster

Development of Autonomous Drones for Adaptive Obstacle Avoidance in Real World Environments .707.....  
*Arne Devos (KU Leuven, Belgium), Emad Ebeid (SDU UAS Center, MMMI, University of Southern Denmark, Denmark), and Poramate Manoonpong (Embodied AI and Neurorobotics Lab, MMMI, University of Southern Denmark, Denmark)*

## MCSDIA: Mixed-Criticality System Design, Implementation and Analysis

Functional Test Environment for Time-Triggered Control Systems in Complex MPSoCs Using GALI .711.....  
*Razi Seyyedi (OFFIS - Institute for Information Technology), Sören Schreiner (OFFIS - Institute for Information Technology), Maher Fakh (OFFIS - Institute for Information Technology), Kim Grüttner (OFFIS - Institute for Information Technology), and Wolfgang Nebel (University of Oldenburg)*

Exploring Power and Throughput for Dataflow Applications on Predictable NoC Multiprocessors .719.....  
*Kathrin Rosvall (KTH Royal Institute of Technology), Tage Mohammadat (KTH Royal Institute of Technology), George Ungureanu (KTH Royal Institute of Technology), Johnny Öberg (KTH Royal Institute of Technology), and Ingo Sander (KTH Royal Institute of Technology)*

A Reliable Statistical Analysis of the Best-Fit Distribution for High Execution Times .727.....  
*Xavier Civi (Barcelona Supercomputing Center (BSC) and Universitat Autònoma de Barcelona (UAB)), Joan del Castillo (Universitat Autònoma de Barcelona), and Jaume Abella (Barcelona Supercomputing Center (BSC))*

## MCSDIA Posters

Virtual Switch Supporting Time-Space Partitioning and Dynamic Configuration for Integrated Train Control and Management Systems .735.....  
*Hongjie Fang (University of Siegen, Germany) and Roman Obermaisser (University of Siegen, Germany)*

Design Space Exploration for Mixed-Criticality Embedded Systems Considering Hypervisor-Based SW Partitions .740.....  
*Vittoriano Muttillio (University of L'Aquila), Giacomo Valente (University of L'Aquila), and Luigi Pomante (University of L'Aquila)*

**Author Index .745** .....
