

PROGRESS IN BIOMEDICAL OPTICS AND IMAGING

Vol. 19 No. 55

2nd Canterbury Conference on OCT with Emphasis on Broadband Optical Sources

**Adrian Podoleanu
Ole Bang**
Editors

**6–8 September 2017
Canterbury, United Kingdom**

Organized by
Applied Optics Group, School of Physical Sciences, University of Kent (United Kingdom)
NKT Photonics (Denmark)
Technical University of Denmark (Denmark)

Published by
SPIE

Volume 10591

Proceedings of SPIE, 1605-7422, V. 10591

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *2nd Canterbury Conference on OCT with Emphasis on Broadband Optical Sources*, edited by Adrian Podoleanu, Ole Bang, Proceedings of SPIE Vol. 10591 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xiii	<i>Introduction</i>
xv	<i>Conference Sponsorship and Support</i>

OCT IN OPHTHALMOLOGY

10591 02	New clinical opportunities for retinal vascular imaging: adaptive optics to OCT angiography (Invited Paper) [10591-50]
10591 03	Subretinal hyper-reflective material seen on optical coherence tomography as a biomarker for disease monitoring in age-related macular degeneration [10591-44]
10591 04	Supercontinuum ultra-high resolution line-field OCT; experimental spectrograph comparison and comparison with current clinical OCT systems by the imaging of a human cornea [10591-43]
10591 05	Use of a supercontinuum white light in evaluating the spectral sensitivity of the pupil light reflex [10591-41]
10591 06	Superpixel guided active contour segmentation of retinal layers in OCT volumes [10591-21]

OCT ANGIOGRAPHY, MICROSCOPY, AND ENDOSCOPY

10591 07	OCT-based angiography in real time with hand-held probe [10591-6]
10591 08	Assessing embryo development using swept source optical coherence tomography [10591-26]
10591 09	Tissue imaging using full field optical coherence microscopy with short multimode fiber probe (Invited Paper) [10591-3]
10591 0A	Towards an ultra-thin medical endoscope: multimode fibre as a wide-field image transferring medium [10591-34]

NOISE IN SUPERCONTINUUM

10591 0B	Low-noise supercontinuum sources based on all-normal dispersion fibers: exploring their prospects and limitations (Invited Paper) [10591-47]
----------	---

10591 0C	Noise study of all-normal dispersion supercontinuum sources for potential application in optical coherence tomography [10591-32]
ADDRESSING THE BROADBAND CHALLENGE	
10591 0D	Resolution dependence on phase extraction by the Hilbert transform in phase calibrated and dispersion compensated ultrahigh resolution spectrometer-based OCT [10591-20]
MULTIMODAL APPROACHES	
10591 0E	Phase sensitive optical coherence microscopy for photothermal imaging of gold nanorods [10591-39]
10591 0F	Photonic compressive sensing enabled data efficient time stretch optical coherence tomography [10591-31]
NONDESTRUCTIVE TESTING AND ART CONSERVATION	
10591 0G	(Full field) optical coherence tomography and applications [10591-45]
10591 0H	Impact of absorption in the top layer of a two layer sample on spectroscopic spectral domain interferometry of the bottom layer [10591-12]
OCT IN DENTISTRY	
10591 0I	Investigation of firing temperature variation in ovens for ceramic-fused-to-metal dental prostheses using swept source optical coherence tomography [10591-11]
10591 0J	OCT investigation of dental lesions [10591-36]
10591 0K	New ways of combating demineralization: link between classic and allopathic medicine [10591-7]
10591 0L	OCT aspects of dental hard tissue changes induced by excessive occlusal forces [10591-35]
10591 0M	Dental impression technique using optoelectronic devices [10591-8]
CONDITIONING THE SIGNAL	
10591 0N	Swept source optical coherence tomography of objects with arbitrary reflectivity profiles [10591-28]
10591 0O	Coherence and diffraction limited resolution in microscopic OCT by a unified approach for the correction of dispersion and aberrations [10591-48]

- 10591 0P **Fast detection of vascular plaque in optical coherence tomography images using a reduced feature set** [10591-29]
- 10591 0Q **Phase estimation for global defocus correction in optical coherence tomography** [10591-46]
- 10591 0R **Increasing signal-to-noise ratio of swept-source optical coherence tomography by oversampling in k-space** [10591-27]
- 10591 0S **Reduction of measurement errors in OCT scanning** [10591-13]
- 10591 0T **Long axial imaging range using conventional swept source lasers in optical coherence tomography via re-circulation loops** [10591-14]

MASTER SLAVE OCT

- 10591 0U **From master slave interferometry to complex master slave interferometry: theoretical work (Invited Paper)** [10591-49]

RANDOM LASERS AND SWEPT SOURCES

- 10591 0V **Optimisation of a polygon mirror-based spectral filter for swept source optical coherence tomography (SS-OCT)** [10591-30]
- 10591 0W **Stable supercontinuum source based on random lasing** [10591-24]
