

PROCEEDINGS OF SPIE

High Energy, Optical, and Infrared Detectors for Astronomy VIII

Andrew D. Holland

James Beletic

Editors

10–13 June 2018

Austin, Texas, United States

Sponsored by

SPIE

Cosponsored by

4D Technology (United States) • Andor Technology, Ltd. (United Kingdom) • Astronomical Consultants & Equipment, Inc. (United States) • Giant Magellan Telescope (Chile) • GPixel, Inc. (China) • Harris Corporation (United States) • Materion Corporation (United States) • Optimax Systems, Inc. (United States) • Princeton Infrared Technologies (United States) • Symétrie (France) • Teledyne Technologies, Inc. (United States) • Thirty Meter Telescope (United States)

Cooperating Organizations

European Space Organisation • National Radio Astronomy Observatory (United States) Science & Technology Facilities Council (United Kingdom) • Canadian Astronomical Society (Canada) • Canadian Space Association ASC (Canada) • Royal Astronomical Society (United Kingdom) • Association of Universities for Research in Astronomy (United States) • American Astronomical Society (United States) • Australian Astronomical Observatory (Australia) • European Astronomical Society (Switzerland)

SPIE

Volume 10709

Proceedings of SPIE 0277-786X, V. 10709

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *High Energy, Optical, and Infrared Detectors for Astronomy VIII*, edited by Andrew D. Holland, James Beletic, Proceedings of SPIE Vol. 10709 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix *Authors*
xiii *Conference Committee*

SESSION 1 SENSOR REVIEWS

10709 03 **Teledyne e2v sensors optimised for ground-based and space applications** [10709-2]

SESSION 2 IR DETECTOR DEVELOPMENT

10709 05 **Development of astronomy large focal plane array "ALFA" at Sofradir and CEA** [10709-5]

10709 07 **A monolithic 2k × 2k LWIR HgCdTe detector array for passively cooled space missions** [10709-7]

SESSION 3 CCD

10709 08 **Development of germanium charge-coupled devices** [10709-8]

10709 0A **Preliminary characterization results of a large format 4k × 4k EMCCD** [10709-10]

10709 0C **Ultraviolet detectors for astrophysics missions: a case study with the star-planet activity research cubesat (SPARC)** [10709-12]

10709 0D **Ultraviolet sensitivity of a teledyne-e2v EMCCD** [10709-13]

SESSION 4 X-RAY DETECTOR DEVELOPMENT I

10709 0E **Small pixel hybrid CMOS x-ray detectors** [10709-14]

10709 0F **Recent improvements on high-speed DEPFET detectors for x-ray astronomy** [10709-15]

SESSION 5 RADIATION DAMAGE TESTING

- 10709 0K **Investigating end-of-life performance of the PLATO CCD: cryogenic versus room temperature proton irradiation comparison** [10709-21]
- 10709 0N **TID and high energy protons tests on IR HgCdTe CMOS detectors for Jovian environment** [10709-24]

SESSION 6 IR CHARACTERIZATION

- 10709 0Q **Euclid H2RG detectors: Impact of crosshatch patterns on photometric and centroid errors** [10709-26]
- 10709 0R **Commissioning of cryogenic preamplifiers for SAPHIRA detectors** [10709-27]
- 10709 0S **Detector chain calibration strategy for the Euclid flight IR H2RGs** [10709-28]
- 10709 0T **The ACADIA ASIC: detector control and digitization for the Wide-Field Infrared Survey Telescope (WFIRST)** [10709-29]

SESSION 7 CMOS DEVELOPMENT AND TESTING

- 10709 0U **Curved detectors developments and characterization: application to astronomical instruments** [10709-30]
- 10709 0V **A CMOS visible image sensor with non-destructive readout capability** [10709-31]

SESSION 8 TESTING/CHARACTERIZATION I

- 10709 11 **HgCdTe SAPHIRA arrays: individual pixel measurement of charge gain and node capacitance utilizing a stable IR LED** [10709-37]

SESSION 9 INFRARED SENSORS I

- 10709 14 **Astronomical interferometry with near-IR e-APD at CHARA: characterization, optimization and on-sky operation** [10709-41]
- 10709 16 **Photon counting in the infrared with e-APD devices** [10709-43]

SESSION 10 SIMULATION

- 10709 17 **WFIRST coronagraph detector trap modeling results and improvements** [10709-44]
- 10709 18 **C3TM: CEI CCD charge transfer model for radiation damage analysis and testing** [10709-45]
- 10709 19 **Validation of a CCD cosmic ray event simulator against Gaia in-orbit data** [10709-46]
- 10709 1A **Pyxel: a novel and multi-purpose Python-based framework for imaging detector simulation**
[10709-47]
- 10709 1B **Characterizing and correcting persistence in James Webb Space Telescope HgCdTe detectors**
[10709-48]
- 10709 1C **Proximity effect model for x-ray transition edge sensors** [10709-49]

SESSION 11 X-RAY DETECTOR DEVELOPMENT II

- 10709 1E **Pair creation energy and Fano factor of silicon measured at 185 K using ^{55}Fe x-rays** [10709-51]

SESSION 12 TESTING/CHARACTERIZATION II

- 10709 1G **Random telegraph signal (RTS) in the Euclid IR H2RGs** [10709-53]
- 10709 1H **Observatory deployment and characterization of SAPHIRA HgCdTe APD arrays** [10709-54]

SESSION 13 TESTING/CHARACTERIZATION III

- 10709 1L **Characterization of LSST CCDs using realistic images, before first light** [10709-59]

SESSION 14 INFRARED SENSORS II

- 10709 1O **Addressing environmental and atmospheric challenges for capturing high-precision thermal infrared data in the field of astro-ecology** [10709-63]
- 10709 1P **H4RG characterization for high-resolution infrared spectroscopy** [10709-65]

POSTERS-TUESDAY

- 10709 1Q **Scientific CCD camera for CSTAR telescope in Antarctica** [10709-66]
- 10709 1T **Evaluation of large pixel CMOS image sensors for the Tomo-e Gozen wide field camera**
[10709-70]
- 10709 1V **Commissioning of a common-user test facility to evaluate the effects of high-energy particles
on next-generation cryogenic detectors** [10709-72]
- 10709 1X **Development of a compact readout system for optical CCD in Higashi-Hiroshima Observatory**
[10709-74]
- 10709 1Z **Thermal and mechanical design and test of the CCD mount for the WEAVE spectrograph
cryostats** [10709-76]
- 10709 20 **Digital correlated double sampling CCD readout characterization** [10709-77]
- 10709 21 **Euclid flight H2RG IR detectors: per pixel conversion gain from on-ground characterization for
the Euclid NISP instrument** [10709-78]
- 10709 23 **Cryogenic detector preamplifier developments at the ANU** [10709-80]
- 10709 24 **Configuration of readout electronics and data acquisition for the HiPERCAM instrument**
[10709-81]
- 10709 25 **Simulations of the Large Size Telescope drive system** [10709-82]
- 10709 26 **HgCdTe detectors grown on silicon substrates for observational astronomy** [10709-83]
- 10709 27 **The operational characteristics and potential applications of a low voltage EMCCD in a CMOS
process** [10709-84]
- 10709 28 **PSF and non-uniformity in a monolithic fully depleted 4T CMOS image sensor** [10709-85]
- 10709 29 **Operation of a H4RG-10 in the NASA Goddard Astrophysics Division IR detector lab testbed**
[10709-86]
- 10709 2B **Optimization of CCD operating voltages for the LSST camera** [10709-88]
- 10709 2C **Laboratory characterization of SLS-based infrared detectors for precision photometry**
[10709-89]
- 10709 2D **Electroplated bismuth absorbers for planar NTD-Ge sensor arrays applied to hard x-ray
detection in astrophysics** [10709-90]
- 10709 2G **The bias and clock drive ASIC for astronomical CCD controller** [10709-96]

10709 2H	Design of a multiband near-infrared sky brightness monitor [10709-97]
10709 2J	Thermodynamics simulation for vacuum head of a 1K*1K CCD camera [10709-99]
10709 2K	The readout design of Si-PIN detector in HXMT [10709-100]
10709 2O	Reconfigurable focal plane electronics for advanced all-digital focal plane sensors in space applications [10709-104]
10709 2Q	Focal plane array alignment and cryogenic surface topography measurements for the Prime Focus Spectrograph [10709-106]
10709 2R	Smartphone scene generator for efficient characterization of visible imaging detectors [10709-107]
10709 2S	Adapting thermal-infrared technology and astronomical techniques for use in conservation biology [10709-108]
10709 2T	A pair of custom ASICs for bias generation and clock buffering in space-based CCD camera systems [10709-109]
10709 2W	Characterization of the per-pixel dark current and activation energy of a large format CMOS image sensor [10709-112]
10709 2X	Two-dimensional MTF characterization of a large format CMOS detector [10709-113]
10709 30	Noise performance of the JWST/NIRSpec detector system [10709-116]
10709 31	Development of transition edge sensor detectors optimized for single-photon spectroscopy in the optical and near-infrared [10709-117]
10709 32	Signal dependent interpixel capacitance in hybridized arrays: simulation, characterization, and correction [10709-118]
10709 33	Sink pixels in the HST wide-field channel 3 CCDs [10709-119]
10709 35	VERITAS 2.2: a low noise source follower and drain current readout integrated circuit for the wide field imager on the Athena x-ray satellite [10709-121]
10709 36	Intra-pixel response characterization of a HgCdTe near infrared detector with a pronounced crosshatch pattern [10709-122]
10709 37	Predicting the particle-induced background for future x-ray astronomy missions: the importance of experimental validation for GEANT4 simulations [10709-124]
