## Table of Contents

Front Cover ..................................................................................................................................................................... 1

Home Automation System and Methods (Control system in lighting and devices) in fuel supply station................... 17

Line Follower Robot Arduino (using robot to control Patient bed who was infected with Covid-19 Virus)........... 20

Advanced Secure Architecture for The Internet of Things based on DTLS Protocol .................................................. 23

Quantifying Brain Activity State: EEG analysis of Background Music in A Serious Game on Attention of Children .......................................................... 28

Performance Evaluation of Different Window Functions for Audio Fingerprint Based Audio Search Algorithm..... 35

Analysis the performance of AODV and DSDV routing protocols in different packets size by using the Flow monitor in NS3.19......................................................... 39

Evaluate the DSR and OLSR Routing Protocols in different scenarios under NS3 and SUMO Using the NETEDITOR in VANETs ........................................................................ 44

Implementing Group-Based Authentication Methods on The Internet of Things Standards.................................. 49

A Smart Virtual Assistant Answering Questions About COVID-19........................................................................ 55

Classification of Hand-Drawn Circuit Components by Considering the Analysis of Current Methods............... 61

Classification of Hand-Based and Non-Hand-Based Physical Activities Using Wearable Sensors.................... 66

A Comparative Investigation of the Mechanical Properties of Mild Steel Rods Produced by two Local Steel Manufacturers in Nigeria .................................................................................. 71

Optimal EMG Feature Selection for Classification of Normal and Post-Stroke from Hand-Reaching Movement .... 75

Numerical Analysis of Doubly Nonlinear Reaction-Diffusion System with Distributed Parameters ...................... 81

Enhancement of Speech Signals for Hearing Aid Devices using Digital Signal Processing..................................... 84

Fuzzy System for the Evaluation Quality of Products ............................................................................................ 91

Triangle metamaterial based energy harvester design for 5G frequency ................................................................. 95

Metamaterial Biosensor for ISM Band Biomedical Applications .............................................................................. 99

H∞ Optimal Control of DTMB 5415 Combatant Roll Motion with Active Fins .................................................... 103

Localization of Mobile Robots Through Reference Point and Target Positioning ................................................. 108

Automated Control of the Process of Formation Individualized Trajectories Students Preparation in the Credit System........................................................................................................................................ 114

A Deep learning model for image retargetting level Detection .............................................................................. 118

Printed Circuit Board Rapid Prototyping with Three-Dimensional Printer ................................................................... 122

The Impact of Physical Work Environment on The Employee Job Satisfaction in Private Office Type: The Case of Erbil City ........................................................................................................................................ 129

An Investigation on Mechanical Properties of PLA Produced by 3D Printing as an Implant Material ............. 138

Design and Performance Analysis of Split Ring Resonator Based Microstrip Antenna with Defected Ground Structure

Preliminary design of a novel kinematic forearm model for pro/supination motion

Covid-19 Salgınıyla Beklenen Değişimlere Blok Zinciri Teknolojisinin Etkileri

Blok Zinciri ile Yeni Nesil Dağıtuk Defteknikolojilerinin Karşılaştırılması

Adaptive Cruise Control: Scenario Modeling and Control Performance Improvement

Bangla Document Classification using Character Level Deep Learning

Rose Diseases Recognition using MobileNet

Optimization Search Using Hypercubes

Image Filter With Logistic Functions

Approach for Accelerating Image Enhancement Processes: Optimized OpenCL Architecture

Autonomous Face Detection and Tracking Using Quadrotor UAV

Electromagnetic Characterization of Polycaprolactone electrospun nanofibers filled with Fe3O4 Nanoparticles

Churn Prediction with Sequential Data Using Long Short Term Memory

An Experimental Study on Hyper Parameters for Training Deep Convolutional Networks

Classification of Harmful Noise Signals for Hearing Aid Applications using Spectrogram Images and Convolutional Neural Networks

Methodology for Risk Assessment based on Grey Relational Analysis: A Case Study in the Automotive Industry

The Process Improvement Studies to Increase the Productivity in a Printed Fabric Production Facility

Fuzzy Logic Controller to control the position of a mobile robot that follows a track on the floor

Design and Control of an Unmanned Underwater Vehicle

Overview of Big Data Applications in Remote Sensing

Discerning COVID-19 from mycoplasma and viral pneumonia on CT images via deep learning

Deep learning for mycoplasma pneumonia discrimination from pneumonias like COVID-19

A GIS-based Mapping of Mountain Peaks, Waterfalls and Mountain Lodges in North Macedonia

Classification of Protein Structures by Making Fuzzy-Rough Feature Selection

Potassium Ferrocyanide electrochemically detected by Differential Pulse and Square Wave Voltammetry in a Competition using Gradient Boosting as Machine Learning Algorithm

Vector Control of Permanent Magnet Synchronous Motor by a Two-Level SPWM Inverter

Hand Movement Pattern Recognition Based on Convolutional Neural Network and AlexNet Architecture

Diagnosis of hand tremor using a smart phone accelerometer and SVM

Privacy and Security Problems in Healthcare 4.0

IoT based animal monitoring system

An Application of Slime Mould Algorithm for Optimizing Parameters of Power System Stabilizer

Improved Artificial Electric Field Algorithm Using Nelder-Mead Simplex Method for Optimization Problems
Thunderbird Add-On “SmartMail” for More Convenient E-Mail Writing ................................................................. 730

A Matlab/Simulink® dynamic model of a pneumatic piston and system for industrial application .......................... 735

Optimizing Intersection Performance Using Sidra Program on Baraki Intersection Kabul Afghanistan ................... 743

Simulation of online relative concentration measurements in chemical processes using Brownian motion and image processing ................................................................................................................................................................... 751

Hybrid Detection Techniques for Skin Cancer Images ........................................................................................................ 762

Fabrication of Simple and Low-cost Droplet Generator by Xurography Method .............................................................. 770

Speaker Voice Recognition Using A Hybrid Pso/Fuzzy Logic System ............................................................................ 775

Improved Genetic Algorithm and Mobile Application for an Up-to-date Traveling Salesman Problem ........................................... 780

Network of Low Energy Adaptive Clustering Protocols ................................................................................................... 787

TrustedID: An Identity Management System based on OpenID Connect Protocol ................................................................................. 792

Efficient Energy Management in Smart Homes using IOT- based Low-Power Wide-Area Network (LoRaWAN) Protocol ........................................................................................................................................................................ 798

Predicting Breast Cancer in Fine Needle Aspiration Images Using Machine Learning ....................................................... 806

Intrusion Detection System in Iot Network Using Machine Learning ........................................................................ 810

Magnetic Resonance Imaging (MRI) For Brain Tumor and Seizures Classification Using Recurrent Neural Network ............................................................................................................................................................................. 815

Exploring User Centered Design in Healthcare: A Literature Review ........................................................................ 822

Cloud Computing Security for Algorithms ........................................................................................................................... 830

Design a Bidirectional DC/DC Converter for Second-Level Electric Vehicle Bidirectional Charger ........................................... 835

Internet of Things and Cloud Computing – A Review ........................................................................................................ 838

Design and Development of Interconnected Renewable Energy Sources Focused On Grid Power Inverter Energy For Sustainable Development A Review .................................................................................................................................................................. 845

Effects of Clem Cloud Based E-Learning Management System for Teaching A Review .............................................................. 851

Synopsis on Study Of Extended Mobility Management Of 5g Network Using Millimetre Wave Communication.. 856

Wireless Body Region Networks Abnormality Identification And Energy Saving A Study ........................................ 864

Performance Analyses Of Channel Estimation And Precoding For Massive Mimo Downlink In The Tdd System 869

A Lightweight Image Encryption And Blowfish Decryption For The Secure Internet Of Things ........................................ 875

Image Super-Resolution Using Sparse Representation And Novelty Noise Removal Super-Resolution ........................................ 880

Design of Health Care Monitoring System Based on Internet of Thing (IOT) ................................................................................. 885

Iris Detection And Recognition By Image Segmentation Using K-Means Algorithm and Artificial Neural Network .............................................................................................................................................................................. 891

Implementation a Various Types of Machine Learning Approaches for Biomedical Datasets based on Sickle Cell Disorder ........................................................................................................................................................................ 895

BLDC Speed Control by Bidirectional Battery Charger with SEPIC MPPT ........................................................................ 901
Fuzzy Rule-Based System for Predicting Daily Case in COVID-19 Outbreak .......................................................... 907
Predicting the physical parameters of interplanetary shock waves using Artificial Neural Networks trained on NASA’s ACE and WIND spacecrafts ............................................................... 911
Personalized Quality of Experience (QOE) Management using Data Driven Architecture in 5G Wireless Networks .......................................................... 918
IoT DDOS Attack Detection Using Machine Learning ......................................................................................................................... 928
An Overview of OFDM-UWB 60 GHZ System in High Order Modulation Schemes .................................................................................................................................................................................... 935
Efficient Routing Technique In Wireless Sensor Network Using Pso Topology Optimization .............................................................. 941
A Survey on Multi-Objective Harmony Search Based Clustering and Characteristics in WSN .......................................................... 945
A Blockchain Based Land Registration System Proposal for Turkey ......................................................................................................................... 950
Digital Transformation Revolution with Digital Twin Technology .......................................................................................................................... 956
The Digital Twin Revolution in Healthcare .................................................................................................................................................................................... 963
Predicting Covid-19 Trajectory Using Machine Learning .......................................................................................................................... 970
Identity Management Approach in Internet of Things (IoT) .......................................................................................... 974
Machine Learning and Statistical Analysis applied on Mechanical Engineering CAD course: A Case Study During ERTE Pahse in the Context of Higher Education .................................................................................................................................................................................... 980
Performance analysis of a parabolic through concentrator with a curved secondary reflector .......................................................................................... 993
Kesir-mertebeyle kayma kipli bulanık kontrolör Tasarımı .......................................................................................................................... 1000
Non-Contact Total Hemoglobin Estimation using a Deep learning Model .................................................................................................................................................................................... 1008
Multilayer Perceptron Approach to PLA, PLA/Copper and PLA/Carbon Substrate Bow-tie Antenna Production. 1014
Multilayer Perceptron Approach to Different Parameter Bow-tie Antennas Produced with PLA / Carbon / Copper Mixtures .................................................................................................................................................................................... 1018
Optimal 3D Path Planning for the Delivery Quadcopters Operating in a City Airspace .......................................................................................................................... 1022
Covid-19 Disease Diagnosis From Radiology Data With Deep Learning Algorithms .......................................................................................................................... 1032
IoT Based Mobile Smart Home Surveillance Application .......................................................................................................................... 1036
Energy Optimization In WSN Routing By Using The K-Means Clustering Algorithm And Ant Colony Algorithm1041
Robot Pathplanning By Image Segmentation Using the Fuzzy Cmeans Algorithm And Knn Algorithm .............................................................. 1045
Fingerprint Recognition by Using Convolutional Neural Network And Support Vector Machine Classification. 1049
Mathematical Model of Curriculum Development Taking into Account Individual Preferences of Students .......................... 1053
Mathematical Model for Clinical Decision Support System Using Genetic Algorithm .................................................................................................................................................................................... 1058
Web Accessibility of e-Government Portals and Ministry Websites of the Cyprus Island ...................................................... 1063
Securing 5G Network using low power wireless personal area network .................................................................................................................................................................................... 1069
Hydra: detecting fraud in financial transactions via graph based representation and visual analysis .............................................................. 1077
Combined Beamforming-Waveform Design using Mid-Band Frequencies for 5G and Beyond Networks .......................... 1083
Classification of electrocardiogram (ECG) data using deep learning methods .............................................................. 1088
Green Coexistence of CP-OFDM and UFMC Waveforms for 5G and Beyond Systems .................................................................................................................................................................................... 1093
Real Estate Price Range Prediction Using Artificial Neural Network and Grey Wolf Optimizer ................................. 1099
Development of Edge-IoMT Computing Architecture for Smart Healthcare Monitoring Platform ............................ 1104
Investigation of the Using of Shape Memory Alloys to Reduce Vibration in the Cutting Tool in Turning Operations  .............................................................................................................................................. 1108
Simultaneous Localization and Mapping with Basic Cognitive Understanding of Environments ............................... 1116
Individual Eye Gaze Prediction with the Effect of Image Enhancement Using Deep Neural Networks ........................ 1122
Scheduling Data Allocation in Packet Based Wireless Communication System Using Data Mining .......................... 1129
Determination of Cardiovascular Occlusion with Microstrip Antennas ................................................................. 1139
Conceptual of Plasma Jet System for Telomere Expansion .......................................................................................... 1143
A Review of PAPR Reduction Techniques for UFMC Waveform ............................................................................ 1149
Detection of Facial Features Using Statistical Machine Learning ............................................................................. 1155
Human Biometrics Detection and Recognition System Using SVM And Genetic Algorithm Iris as An Example .... 1159
OHS 4.0 Approach and Use Case of Indoor Positioning Systems .............................................................................. 1163
Heart Rate Variability Response on Autism Spectrum Disorder and Typical Development Children ...................... 1168
