## CIDs and ASME Conference Proceedings

Beginning with 2013 conference proceedings, ASME transitioned to e-first publication of conference Proceedings. As a result, instead of traditional page numbers, the online pagination has been by 11-digit citation identifiers (CIDs); For instance, using the CID V###T##A### as an example, the structure of the basic 11-digit citation is defined as follows:

- First four digits (V00#): indicate the **Volume Number**
- Middle three digits (T##): indicate the **Track Number**
- Last four digits (A###): indicate the **Article Order** in which the paper is published within the track.

In the print version, the CID appears on every page of the paper followed sequentially by the page number of each article starting with page one. For example, the pagination for a three page article would use the following sequence:

V###T##A###-1  
V###T##A###-2  
V###T##A###-3

In the ASME Digital Collection version, the CID appears on the Table of Contents where the paper is published. The CID also appears on the abstract page, followed by the total number of pages in the paper. For example: V###T##A###; 3 pages

### **CIDs and Citations**

When citing an article that has been published with a CID, enter the CID where the page range would have gone previously; do not include the page numbers used on the PDF or print.

### **Errata**

Errata submitted by authors after publication of this volume are published with the relevant paper on the ASME Digital Collection
