# TABLE OF CONTENTS

AISTech® 2022

## Volume I

### J. KEITH BRIMACOMBE MEMORIAL LECTURE AND AME KEYNOTE LECTURE

**J. Keith Brimacombe Memorial Lecture and AME Keynote Lecture**

Modern Tools for Steelmaking Research and Optimization ................................................................. 1  
*P. Chris Pistorius*

### SAFETY & HEALTH

#### Innovations in Equipment & Behavioral Tools

Ranking and Managing Occupational Hazards in the Workplace: A Case Study of the Iron and Steel Manufacturing Industry ........................................................................................................ 7  
*Ephraim Massawe*

#### Process Specific Safety

An Application of Performance-Based Design Techniques for Fire Protection of a Batch Annealing Process .......................................................................................................................... 17  
*John Wade, Robert Cloutier, Partha Sarker*

Improving Safety Conditions in the EAF .................................................................................................. 26  
*Fernando Diaz, Vladimir Guinez*

### Safety Through Digitalization

Exploring the Factors Impacting the Implementation Success of IoT-Based Wearable Sensing Devices for Safety and Health Monitoring in Steel Manufacturing ........................................ 39  
*Ibukun Awolusi, Chinedu Okonkwo, Aliu Akinsemoyin, Raul Sandoval, Noah Lubbering*

Application of Virtual Reality Simulation as a Tool for Safety-Related Training in the Steel Industry ..................................................................................................................................... 45  
*Franz Ramstorfer, Silvio Braz Da Silva, Luis Gaspar Da Silva, Virgina Halty Rivero, Bruno Lopes Xavier, Leonardo Martins Demuner*

### ENVIRONMENTAL

#### Novel Technology Treatment to Reduce Environmental Footprint

Addressing Operating Cost, Productivity and Emissions Challenges Associated with Dirty, Oily Scrap at Metalfer Steel Mill, Serbia ......................................................................................... 56  
*Vittorio Scipolo, Prashant Bihare, Nikola Zlatkovic*
Optimizing Blast Furnace Stoves with Fast Stoichiometric Combustion Control .................................................. 65
Emmaline Mazzei, Trenton Tagessen, Robin Roberts, Robert Bambeck

Utilizing Advanced Simulation Techniques to Improve Hood Design ................................................................. 72
Brian Bakowski

Environmental and Production Improvements in Plate Production by Digitalization of Cooling Technologies .......................................................... 79
John Hinton, Ian Robinson

Electrical Energy Reduction for Air Pollution Control Systems: Further Improvements on Two American Plants with Smooth Fluid-Dynamic Solutions from the Quenching Tower to the New, Patented Stack ........................................................................... 88
Marco Peter Cudicio, Alberto Feruglio

Reducing Greenhouse Gas Emissions
Sustainable Steel Production by Integration of Induction Furnaces ................................................................. 95
Markus Hagedorn, Marco Rische, Gerald Wimmer, Christopher Carstens, Thomas Steinparzer

Water Treatment & Auxiliary Technologies
A New “All-In-One” Acid Regeneration Plant Dedicated to Small-Scale HCl Waste Streams ......................... 104
Andreas Zoellner, Jörg Bollmann

Zero Liquid Discharge Technology for TMZ’s 500-Ktpy Cold Mill Complex ............................................. 110
Lorenzo Marino

IRONMAKING

Digitization, Control & Modeling
Modeling the Impacts of Nuisance Elements on Blast Furnace Operation .................................................... 116
Tyamo Okosun, Samuel Nielson, Stuart Street, Gerard Louverse, Jan Van Der Stel, Chenn Zhou

Interpretable Deep Learning Techniques and Meta Information for Automated Decision Making in Ironmaking Plants ................................................................. 125
Matej Vukovic, Dieter Bettinger, Georgios Koutroulis, Petra Krahwinkler, Belgin Mutlu, Martin Schaler, Christian Tauber, Stefan Thalmann

ProcessXpert: A New Generation of Knowledge-Based Blast Furnace Expert System ................................. 136
Juraj Micak, Franck Giroldini, Fabrice Hansen

NOx Emission from the Hot Blast System: Formation, Effects and the Possibilities for Its Reduction ....................................................................................... 148
Bart De Graaff, Jan De Weerdt, Yurii Lytvyanyuk

Equipment & Maintenance
Wear-Resistant Copper Staves — an Update ........................................................................................................ 158
Edward Long, Colin Morrison, Dave Osborne
Improving Blast Furnace Efficiency and Reducing Carbon Emissions with Blast Furnace Oxygen Pulsing Technology ................................................................. 172
  Ross Edmond, Rainer Klock, Bartosz Smaha, Hauke Bartusch

Blast Furnace Tuyere Monitoring Powered by Artificial Intelligence ........................................... 188
  Marc Weydert, Pierre Van Dorpe, Steve Czarnuch, Aissatoundiay Ba

**Operations, Investigations, Analysis I**

Influence of Raceway Shape on Species Concentration ........................................................................... 198
  Eva-Maria Wartha, Markus Bösenhofer, Franz Hauzenberger, Hugo Stocker, Christoph Feilmayr, Michael Harasek

**Operations, Investigations, Analysis II**

Analysis of Deviations During Blast Furnace Smelting in the Blow-In Period and Measures to Prevent and Eliminate Them ........................................................................................................ 206
  Andrey Pishikin, Eduard Scheglov, Michael Alter, Oleg Semenov, Nikolay Logvinov, Vladimir Titov, Nikolay Inozemtsev

Efficiency of Washing Blast Furnace Hearth in Case of Pulverized Coal Injection ................................. 219
  Yuriy Semenov, Viktor Horapakha, Michael Alter, Sergey Vashchenko, Aleksander Khudyakov, Evgen Shumelchik

**Sintering & Pelletizing**

Effect of Adding Calcined Dolomite and Mill Scale to Sinter Mix on the Formation of NO and SO2 .......... 231
  Seongkyu Cho, Leonardo Rocha, Byung-Jun Chung, Sung-mo Jung

Effect of Adding Calcium Ferrites to the Sinter Mix on the Sintering Temperature and Sinter Quality ................................................................................................................................. 242
  Leonardo Rocha, Seongkyu Cho, Sung-Wan Kim, Sung-mo Jung

**IRONMAKING/DIRECT REDUCED IRON**

**Decarbonization**

Pathway to Green Steel in the U.S. by 2027 ......................................................................................... 252
  James Kennedy

H2-Change: Refractory Technologies to Master the Challenge of H2 Atmospheres ............................. 257
  Jens Sperber, Franz-josef Duennes

**DIRECT REDUCED IRON**

**Analysis of Pellets, Product, & Operations**

Modeling of Isothermal Reduction of Hematite Pellets Using Hydrogen ................................................. 266
  Amogh Meshram, Joe Govro, Yuri Korobeinikov, Soumava Chakraborty, Ronald J. O’Malley,
  Sridhar Seetharaman
Structural Analysis and Failure Prediction of Direct Reduced Iron .......................................................... 275
Grant Kenny, P. Chris Pistorius

**Direct Reduction & Decarbonization**

Direct Reduction: Dealing with an Uncertain Future .................................................................................. 283
Todd Astoria

The New Age of HBI ................................................................................................................................. 289
Johannes Rothberger, Christian Boehm, Robert Millner, Wolfgang Sterrer, Adam Merki, Sean Boyle

**Energy & Decarbonization in Operations**

Operational Results of Hot Charging DRI ................................................................................................. 295
Brian Voelker, Sean Boyle

Increased Dependability in Mechanical Conveying of DRI Hot Charge .................................................. 305
N. Bassano, Gaetano Coraggio, C. Mantellino

Melting Behavior of Conventional and Hydrogen-Reduced DRI in a Simulated EAF Steel Bath ............ 319

**ELECTRIC STEELMAKING**

**Challenges With Respect to Raw Materials**

Raw Material and Technology Considerations for Low-C EAF Steelmaking ........................................ 327
Jeremy Jones

New Process for Hazardous Contaminated Steel Scrap to Produce Clean EAF Feedstock .................... 342
Jan-Henk Wijma, Gonzalo Damn, Felix Firsbach

Steel Production Experience in Using Pig Iron and Hot Briquetted Iron in the Electric Arc Furnace at Steel Dynamics Inc. ............................................................................................................. 353
Kamalesh Mandal, William Lee, Don Bryant, Ron Bohna, Evan Wright, Madhu Ranade

**Energy & Decarbonization**

Decarbonization at Nucor Steel Seattle Inc. Using Tallman Supersonic Carbon Injectors .......................... 363
Aaron Strelbisky, Michael Strelbisky, Kelly Kurisu

Linde’s Innovative Method to Improve Energy Efficiency in the EAF ..................................................... 373
Valmiro Sa, Sumant Warty, Izaias Marques, Vitor Zanotelli, Gustavo Pelisser, Joyce Vieira

Operational Results and Experience of Burners/Oxygen Injectors with Moving Flame and Oxygen Jets Installed in the Electric Arc Furnace of Stahl Und Walzwerk Marienhütte ................................................................. 381
Jaroslav Brhel, Thomas Griessacher
Performance & Equipment Upgrades I

Performance and Results of Linde CoJet Technology at Gerdau Long Steel North America
Midlothian Mill ................................................................. 388
Hamzah Alshawarghi, Rafael Bruch

Water Detection and Process Optimization Using Intelligent EAF Technology at SDI Pittsboro .......... 394
M. Khan, Elena Uchiteleva, Vittorio Scipolo, Colin Meidell

Performance & Equipment Upgrades II

Improving Consistency and Safety of Electric Arc Furnaces by Incorporating a Refractory Lining on the Water Panels ................................................................. 404
Angelo Cristante

Next Generation of Electric Furnace Bottom Technology ................................................................. 408
Jacob Kerr, Ashraf Hanna, Matheus Naves Moraes

Anti-Vortexing One-Piece EBT Tap Tubes Improve Steel Cleanliness, Yield and Productivity .......... 414
Bill Porter

Numerical Investigation of EAF Arc Exposure and Water Panel Overheating .................................. 418
Yuchao Chen, Qingxuan Luo, Armin Silaen, Chen Zhou

OXYGEN STEELMAKING

Hot Metal & Raw Materials

Development of Highly Efficient Fluidized Lime for Hot Metal Desulfurization Based on Thermodynamic Calculations and Industrial Validation .................................................. 431
Joyce Aderhold, Felix Firsbach, Christopher Pust, Leomar Marcon, William Johnson, Martin Boike

Potential for Increased Scrap Melting in a BOF .............................................................................. 441
Nirmal Madhavan, Geoffrey Brooks, M. Akbar Rhamdhani, Bapin Rout, Aart Overbosch

Modeling

Software for Dimensional and Wear Control of Lance Tip Face and Nozzles — WRL ...................... 450
Breno Maia, William Lima, Thiago Pinto Wandekoken, Marco Antônio De Souza Leite, Cuadros, Caio Santos, Paulo Vasconcellos Leal Silva, Hewerton Folli, Gustavo Maia De Almeida

Operations

Rotating Lance Tip - An Evolution and Revolution in the Blowing Process for Steel Refining in BOF .................................................................................................................. 461
Breno Maia, William Lima, Haysler Lima, Roberto Tavares

Real-Time Slopping Prediction Based on Recurrent Neural Networks .............................................. 471
Christoph Kirmse, Dehong Yuan, Maximilian Christ
BOF Lance and Functions ................................................................. 480
Willian Lima, Breno Maia

Slag Chemistry

A Statistical Approach to Understand and Control of BOF Slopping by Using Dynamic Model and Process Measurements ................................................................. 493
Bapin Rout, E. M. Beunder, Aart Overbosch, R. Plug, S. Willemsen, J. Sun

Continuous Developments of Usiminas Ipatinga Steel Works 1 Through Slagless Clean Up® Technology ................................................................. 505

Improvements in the Process of Steel Dephosphorization in the Basic Oxygen Furnace ................................................................. 518
Denis Gabriel Viano

Artificial Vision Measures for BOF Mouth and Lance Skulls — LanceSkullMeVi ................................................................. 524
Breno Maia, Willian Lima, Thiago Pinto Wandekoken, Marco Antônio De Souza Leite Cuadros, Gustavo Maia De Almeida, Caio Santos

SPECIALTY ALLOY & FOUNDRY/METALLURGY — PROCESSING, PRODUCTS, & APPLICATIONS

Specialty Alloy & Foundry/Metallurgy — Processing, Products, & Applications

High-Temperature Compression Behavior and Phase Transformations During Continuous Cooling of a Low-Alloy Cr-Ni-Mo Ultrahigh-Strength Steel ................................................................. 531
Rogerio Antaio Cardoso, Mario Buchely, Viraj Athavale, Soumava Chakraborty, Ronald J. O'Malley, Laura Bartlett, Krista Limmer, Katherine Sebeck, Daniel Field

Identification of Microstructural Constituents Based on Hardness Measurements Results ................................................................. 541
Dmitry Tsvetkov, Jagnyaseni Tripathy

Technologies for Melting, Continuous Casting & Heat Treating

Flexible Tundish Configuration for Stainless Steel Producers ................................................................. 557
Abhishek Chakraborty, Johan Richaud, Rakesh Tiwari, Devashish Nagori, Arnab Kundu, Arijit Saha Podder, Rajesh Saxena, Jagmohan Sood

Highest Yields and Lowest Conversion Costs for Stainless Steel Operations ................................................................. 566
Gerald Wimmer, Markus Hagedorn, Denis Vaillancourt, Christopher Carstens, Marco Rische

Level Control: Performance Module for Quality Improvement ................................................................. 572
Ronald Wilmes, Lothar Schaps

Thermodynamic Simulation of Precipitation Hardening Stainless Steel ................................................................. 579
Ana Laura Hernandez Sustaita, Luis Aldolfo Leduc-Lezama, Edgar Iván Saldaña, Martha P. Guerrero Mata
LADLE & SECONDARY REFINING

Ladle Maintenance & Vacuum Degassing
Lances for Vacuum Degassing – Applications and Failure Analysis
Breno Maia, Willian Lima

Diversified Mechanical Vacuum Pump Solutions for VD/VOD
Anke Teeuwen, Aditya Agrawal, Frank Shi

Performance Optimization
Slag-Based Nitrogen Removal from Third-Generation Advanced High-Strength Steel
Panwen Su, P. Chris Pistorius

Volume II

Numerical Simulation of Desulfurization in a Steel Ladle
Congshan Mao, Xipeng Guo, Nicholas Walla, Armin Silaen, Vivek Thapliyal, Chenn Zhou

CONTINUOUS CASTING

Casting Technologies & Process Improvements I
New Breakthroughs in the Modeling of Tundish Stopper Rods
Bruce Forman, Hongbin Yin, Y. Lee

Fully Automated In-Line Strand Condition Monitoring for Enhanced Roll Gap Measurement and
Control in Continuous Casting
Grant McBain, Will Smailes

Anomaly Detection of the Continuous Casting Strand Guide by Monitoring the Withdrawal Force
Using Machine Learning
Franz Ramstorfer, Gabriel Yoshiharu Sato, Leonardo Martins Demuner

Targeting Superheat in Thin-Slab Casters to Improve Productivity and Quality
Eloy Martinez Rehlaender

Mold Behavior
Alternative Caster Mold Water Treatment for Leaky Closed System
Matthew Clardy, James Gleason

Proceedings Computational Analysis of Surface Wave Fluctuation Utilizing Electromagnetic
Braking in a Continuous Caster
Saswot Thapa, Armin Silaen, Chenn Zhou, Mauro Ferreira, Wesley Rollings

New Field Results on Ultrasonic Mold Thermal Mapping for Quality Improvement and Initial
Solidification Diagnostics
Giovanni Schiavon, Stefano Spagnul, Isabella Mazza, Stefano Miani
Development of Exothermic Granule Mold Powder with Improved Thermal Insulation by Adding Metallic Material ................................................................. 669
Shoji Takahashi, Junya Ito, Masanori Okada, Jim Gilmore

New Installations & Modernizations

Experience in Casting and Rolling an Octagonal Section at CMC Steel Arizona ........................................ 677
Gilbert Hutton, Andrea De Luca, M. Isera, A. Burini

World Premiere for a New Type of Mold Level Control to Reach a New Degree of Mold Level Stability ................................................................. 687
Veit Humer, Philipp Wieser, Josef Watzinger, Ferencz Bordas, Markus Nolan, Peter Wimmer, Robert Hornbachner, Andreas Schatz

CONTINUOUS CASTING/METALLURGY — STEELMAKING & CASTING

Continuous Casting/Metallurgy — Steelmaking & Casting

Evaluating the Onset of Hot Tearing in High-Strength and Lightweight Steels Using Controlled Deformation Testing ........................................................................ 698
Katelyn Kiser, Simon Lekakh, Mario Buchely, Viraj Athavale, Soumava Chakraborty, Ronald J. O’Malley, Laura Bartlett, Krista Limmer, Katherine Sebeck, Daniel Field

Combining Time Series and Chemical Composition Data for Early Longitudinal Crack Detection at the Continuous Caster ........................................................................................................ 711
Davi Sala, Andy Van Yperen-De Deyne, Erik Mannens, Azarakhsh Jalalvand

Commencing and Improving the Production of IF Steel Slabs at Chengsteel, HBIS ........................................ 719
Jacques De Vos, Hong Jia Huang, Giuseppe Pratolongo, Antonello Di Salvo

HOT SHEET ROLLING

Hot Sheet Rolling I

New Laminar Cooling Technology Enables Baosteel HSM 2050 to Produce New High-Quality Steel Grades and Formats ........................................................................................................ 727
Naoto Migakida, Alois Seilinger, Ye Wen, Xiaozhen Yang, Jianfeng Wu

Turn-Up and Turn Down Analysis at Roughing Mill Vertical Scalebreaker ........................................................................ 733
Nicolas Legrand, Rajat Bathla

Hot Sheet Rolling II

Various Strategies for the Distribution of Reductions in the Finishing Stands of a Hot Rolling Mill .......... 746
Eugene Nikitenko

Mats Thurgren, Siegfried Latzel, Klaus Pronold, Eberhard Becker

Slab and Billet Grinding and Deburring Solutions ........................................................................ 758
Norbert Asamer
Enhanced Dynamic Response to Impact for Hot Rolling Mills ................................................................. 773
*Bernardo Sainz, Rommel Villarreal*

**Hot Sheet Rolling III**

Zero-Carbon Emission Hot Rolling of Direct Application Sheet with Real Endless Strip Production .......... 781
*Andreas Jungbauer, Lukas Preuler, G. Schwarz, T. Lengauer, B. Kradel*

Effect of Mold Powder Residue on Thin-Cast Slab Scale Structure Evolution During Reheating and Descaling ........................................................................................................................................... 790
*Richard Osei, Dmitry Tsvetkov, Anthony Bader, Simon Lekakh, Ronald J. O’malley*

**HOT SHEET ROLLING/COLD SHEET ROLLING/ROLLS**

**Roll Grinder Rebuild Projects**

Importance of Roll Oxide to Increase Roll Life in a Hot Rolling Mill .................................................... 800
*Sebastien Flament, Hugo Uijtdebroeks, Gisele Walmag, Z. Koont*

**COLD SHEET ROLLING**

**Cold Sheet Rolling I**

Successful Operation of an Anti-Chatter Solution at ArcelorMittal Dofasco’s Tandem Cold Mill ............. 810
*Georg Keintzel, Konrad Krimpelstaetter, Simon Mittlboeck, Adam Junkin*

A Practical Analysis of Benefits of AC Drives Over DC Drives in Cold Rolling Mills ............................. 818
*Navneet Singh, Samir Bansal, Manish Kumar, Ravinder Kumar*

**Cold Sheet Rolling II**

Upgrading Steel Dynamics Inc. – Flat Roll Group Columbus Division’s Continuous Pickling and Cold Rolling Operation for Increased Throughput and Production of Advanced High-Strength Steels ................................................................................................................. 826
*Byron Mcnair, Cody Dyar, Brent Adams, Anthony Wills, Jeff Mclain*

The Evolution of Continuous Annealing and Processing Lines for the Production of Electrical Steels ........................................................................................................................................ 834
*Stefano Martines, Christian Wuppermann*

Building Sustainable Mini Cold Rolling Complexes ............................................................................... 850
*Deepak Khanna, Navneet Singh*

New Cold Mill Complex in Ukraine — Technologies and Achieved Performances ............................. 856
*Marco Girardi, Cristian Bini*

**Cold Sheet Rolling: II**

Aspects of Boundary Lubrication in Advanced High-Strength Steel Rolling ........................................... 865
*Bas Smeulders*
COLD SHEET ROLLING/ROLLS

Cold Roll Texturing
Cr Plating Alternative for Improved Surface Reliability on Cold Rolling Mill Work Rolls ........................................... 878
  Michael Breitsameter, Gregorio Fuentevilla

Latest Developments in Digital Printing for Coil Coating Business .......................................................... 882
  Marco Mazza, Michele Chiappa

GALVANIZING

Galvanizing
Improving Combustion Heating Energy and Emissions Via Retrofit Ceramic Inserts............................... 885
  Bradley Nakanishi, Pierre Gougeon, Catherine Goulas, Christophe Kulej, Thomas Briselden

Quality Optimization of Hot-Dip Galvanized Strip Using Model Predictive Control...................................... 894
  Berend Brasjen, C. J. Boeder, M. Bsibsi, J. Ponsioen, R. Speets, R. Verhoef

PLATE ROLLING

Plate Rolling
Improved API X80 Heavy-Gauge Large-Diameter Pipe Mechanical Property Stability Through
Cost-Effective Optimized Niobium Metallurgy Performance ................................................................. 902
  Jiang Jinxing, Huo Chunyong, Zhang Yongqing, David Han, Jose Bacalhau, Doug Stalheim

Development of High-Toughness Steel Plates for Offshore Pipelines ...................................................... 914
  Daniel Matsubara, Ricardo Faria

Effect of Plate Rolling Strategy and Nb Microalloying in the HAZ Performance After Welding ..................... 923
  Pello Uranga, Nerea Isasti, Jose M. Rodriguez-Ibabe, Nobuyuki Ishikawa, Daichi Izumi,
  Doug Stalheim, David Jarreta, David Martin

Production of Steel Heavy Plates Up to 100 Mm by TMCP with Accelerated Cooling at NLMK
DanSteel ........................................................................................................................................ 934
  Eugene Goli-Oglu, Zibrandt Greisen

High-Performance Plate Production at the New Steckel Plate Mill at Shandong Iron & Steel in
Rizhao, China ....................................................................................................................................... 945
  Klaus Pronold, Alexander Reske, Liu Huibao, Stephan Mosbleck, Weihua Sun

LONG PRODUCTS

Automation
Autonomous Trimming and Sampling of Wire Rod Coil Head and Tail ................................................. 959
  Jens Nylander, Antonio Ambra
New Technologies

A Winning Combination to Enhance Rolling Speed, Stability and Tolerance ......................................................... 967
  Jozí Shuli, Federico Tortul

Improvement of Performances of Cold Heading Quality Wire Rod Produced by HBIS Chengsteel Works ............................................................. 971
  Antonio Mollo, Baohua Wang, Giuseppe Pratolongo, Antonello Di Salvo

PIPE & TUBE

Pipe & Tube

Role of Microstructure and Texture Synergy on Low-Temperature Toughness of Heavy-Gauge Line Pipe Steels ............................................................................. 978
  Jing Su, Michael Gaudet, Muhammad Rashid, Muhammad Arafin

Key Attributes to Consider for Optimum Fracture and Fatigue Performance of API Grade Pipeline Steels in Gaseous Hydrogen Applications ................................................................. 988
  Doug Stalheim, Andrew Slifka, Enrico Lucon, Matthew Connolly, Pello Uranga

Line Pipe Material Consideration for Transport of High-Pressure Hydrogen .............................................................. 1000
  Aquiles Perez, Richard Hill

ROLLS

Rolls

High-Performance Roll End Hubs for Maximum Rolling Mill Availability ................................................................. 1005
  Peter Grawenhof, Jim Fraser

Lifetime-Extended Steel Mill Rollers Produced by Laser Cladding .................................................................................... 1010
  Thomas Schlaefer, Tahnee Bathurst, Brian Probets, Christiane Schulz, Colin Hall

METALLURGY — STEELMAKING & CASTING

Inclusions

Evaluation of Thermo-Calc and FactSage Predictions in Liquid Steelmaking Processes ..................................................... 1029
  Andrew Huck, Bryan Webler, Stephano Piva

Selective Slag Systems for Steel Inclusion Cleanliness .................................................................................................. 1043
  Eloy Martínez Rehlaender

Metallurgy — Steelmaking & Casting

Transient Analysis of Flow in a Multi-Strand Delta-Shaped Tundish ............................................................................. 1049
  Pedro Domingos, Pavan Shivaram, Richard Komaneczy, Guido Peloquin

Studying the Flow and Thermal Dynamics in a Small Single-Strand Tundish ............................................................... 1058
  Pavan Shivaram, Pedro Domingos, Alexandre Resende, Richard Komaneczy, Jeremy Stickan, Preston Barrett
Control of the Tundish Superheat by Modeling the Temperature Loss After the Final Secondary Refinement Process Step Using a Machine-Learning Approach................................................................. 1074
Franz Ramstorfer, Bruno Saveges Cerchiari, Leonardo Martins Demuner

Titanium Nitride Nucleation and Growth During Steel Solidification....................................................... 1082
Peter Wilkerson, P. Chris Pistorius, Bryan Webler

METALLURGY — PROCESSING, PRODUCTS & APPLICATIONS

Alloying, Heat Treatment & Corrosion

The New Generation of Q-Level+: Advanced Steel Level Combined with Flux Level Control.................. 1093
Marcellino Fornasier, Luigi Orsetti, Gabriele Donati, Cristiano Pezzutto, Martin Stepanek

Ronald Wilmes, Lothar Schaps, Georg Nowark, Uwe Plociennik

Automation, Simulation & Modeling

Hydrogen-Based Annealing Technologies for High-Alloyed Steel Strips Open Various Market Segments ........................................................................................................................................ 1109
Sascha Eppensteiner

Prediction Model of Hot-Rolled Coil Temperature and Phase Transformation Applied Local Heat Flux Considering Coil Shape........................................................................................................ 1118
Yuta Sano, Keiichi Yamashita, Masanori Kobayashi, Hiroharu Takahashi, Koki Fukushima

High-Strength Steels & Microstructures

Development of Nanoprecipitation-Strengthened Cold-Rolled Batch Annealed HSLA Sheet Steels (>490MPa Yield Strength) with Superior Formability................................................................. 1128
Siddhartha Biswas, Bilin Chen, Shobhit Bhartiya, V. S. Y. Injeti, Mark Sexton, Amar De

Microstructural Evolution During Normalizing Rolling of Niobium-Microalloyed Steels and Its Correlation with Toughness .................................................................................................................. 1142
Ricardo Faria, Daniel Matsubara, José Silveira, Marcelo Rebello, Antonio Gorni, Pello Uranga

ENERGY & UTILITIES

CO2 Reduction in Operations

Increasing Furnaces' Overall Efficiency with Various Heat Recovery Systems ........................................... 1152
Narayan Raut, Alessandro Venanzini

Danielli Centro Combustion Hydrogen Burners: Effective Green Solutions for Reheating and Heat Treatment Furnaces ................................................................................................................... 1158
Massimiliano Fantuzi, Matteo Mazza, Cristina Apalyras, Giovanni Curedda, Ian Candellero
Decarbonization of the Steel Industry

Danieli’s Way to Decarbonization: An Opportunity for the American Steel Industry ........................................ 1169
  Marco Lapasin, Antonio Sgro

Integration of Green Steel Production in Renewable Energy-Dominated Grids ........................................ 1176
  Nandhakumar Vijayakumar, Rajesh Pai, Dominik Mildt

Hydrogen & CO2 Reduction

CO2 Reduction Options for High-Temperature Heating in the Iron and Steel Industry ................................. 1188
  Scott Brown, Michael Cochran, Keenan Cokain

Dry Furnace: A New Step Toward Decarbonization ..................................................................................... 1197
  Elisa Salamone, Alessandro Venanzini, Narayan Raut

Use of Hydrogen in Operations

Regenerative Burner Systems with Hydrogen Fuel for Decarbonization of High-Temperature Processes .................................................. 1203
  Justin Dzik, Mark Hannum

Numerical Modeling of Hydrogen Application in a Reheating Furnace .................................................. 1210
  Chukwunendum Uzor, Emily Higley, John Rosser, Armin Silaen, Kelly Tian, Joe Maiolo,
  Lawrence Fabina, Chenn Zhou

Electrical Applications

Electrical Applications I

Nucor Steel-Decatur Pickle Line #2 Drive and Motor Replacement ......................................................... 1222
  Thomas Richards, Rich Erickson, Lee Mccreless

Electrical Applications II

Safer, More Efficient Water-Cooled Power Cable Changeout ...................................................................... 1232
  Karl Schwenk

Efficient and Reliable Method to Upgrade Static Var Compensator (SVC) Control Reusing the Solid-State Valves .................................................. 1236
  Jorge Haros, Antonio Mariscal, Eric Martinez, José Luis Pepe, Bernardo Sainz

Volume III

Digitalization Applications

Big Data Strategies

Eliminating CO2, Energy and Quality Inefficiencies Through Application of AI ....................................... 1239
  Michael Peintinger, Falk-florian Henrich
Aligning Production to Available Energy with an Energy Consumption Forecast ........................................ 1244

Stefan Albers

Intelligent Solutions

Utilizing SCR Power Controllers to Improve the Industrial Heat Treat Process Through Predictive Maintenance and Intelligent Power Control ........................................ 1254

Tony Busch

Asset Tracking: Choosing the Correct Technology .................................................................................. 1261

Philip Levin

Machine Learning for Steel

Machine-Learning Model for Hydrogen Content Estimation During the Vacuum Degassing Process......... 1267

Maria Argáez-Salcido, Nelson Sanchez, Alex Alvarez, Daniel Alvarado

Energy Savings and Quality Reliability by Superheat Control Prediction to the Continuous Casting Through Machine Learning .................................................................................. 1274

Esnardo Morales, Maria Argáez-Salcido, Nelson Sanchez, Alex Alvarez

Facilitating the Integration of Machine Learning into Condition Monitoring Systems Using DataXpert ......................................................................................................................... 1284

Christian Dengler, Marc Weydert, Fabrice Hansen, Cedric Shockaert

Optimizing the Digital Mill

Digital Scrap Yard ....................................................................................................................................... 1290

Luca Argiolas, Lorenzo Bacchetti

Direct Rolling Scheduling is Like Tightrope Walking Between Casting and Rolling ................................. 1294

Peter Knoop, Andréa De Sá

Forward Dressing: Toward a More Dynamic and Effective Material Allocation and Production Process .................................................................................................................. 1300

Alessandro Stenico, Marc Schwarzer

Design Features and Innovations of Modern Electrical Arc Furnaces ..................................................... 1307

Eneko Sedano, Jon Serrano

Training 4.0

Practical Overview of Augmented Reality for Worker Development, Safety and Skills Retention .......... 1323

Eric Almquist

Enhanced Digital Twin Solution for Continuous Casting ............................................................................ 1333

Kyle Toth, Yifan Fei, Aleeha Zafar, Chenn Zhou, Nicholas Gregurich, Lidia Yakovleva

Industry 4.0 Operator Training: TrainLab Provides 3D Self-Education and Improves Learning Retention ............................................................................................................................ 1341

Fabian Pizzuto, L. De Plaen
DIGITALIZATION APPLICATIONS/SENSORS

Applied Digitalization

A Foundation for Data Analytics in Manufacturing Using ibaPDA and Open-Source Machine-Learning Tools .......................................................... 1350
  Marcelo Cardoso

Time Series AI for Anomaly Detection and Diagnosis in Steel Production .......................................................... 1354
  Crick Waters, Prerna Jain, Raj Talla, Keval Bhanushali

Optimized Tool Use of Saw Blades on Cold Circular Saws Through the Use of a Condition Monitoring System .......................................................... 1366
  Andreas Kellner, Heimo Huemer, Reinhard Pollhamer

SENSORS

Sensors

Making the Most of Investments — Using Existing Asset Data to Power Predictive Maintenance .......... 1374
  Niall Sullivan

Next-Generation Eddy Current Testing with Expandable and Configurable Instruments and Multi-Segment Sensors .......................................................... 1377
  Hari Muthuswami

Advances in Slag Detection Help Steel Mills Increase Yield While Reducing Environmental Impact .......................................................... 1383
  Lucas Demysh, Shiva Bissoon

Improved Stability in Control of Sinter Feed Basicity by Using GEOSCAN Real-Time On-Belt Analysis .......................................................... 1388
  Luke Balzan

Latest Solutions for Slab Surface Defect Detection: Combining Laser Sectioning, Machine Vision and Machine Learning for Best Results .......................................................... 1395
  Marco Appio, Angelo Lugnan

PROJECT & CONSTRUCTION MANAGEMENT

Project & Construction Management I

Experience with Operation and Maintenance of the Spray-Cooled EAF Roof at Ovako Hofors ................. 1401
  Markus Abel, Louis Valentas, Scott Ferguson

Design, Construction and Start-Up of the Continuous Galvanizing Line #3 at Steel Dynamics Inc. — Flat Roll Group Columbus Division — the 10th Galvanizing Line of Steel Dynamics Inc. ......................... 1409
  Brandon Ensor, Andrew Howard, Jeff Baumann, Tom Herb, Jeff Roach, Madhu Ranade

Danieli’s Modular Design Concept .......................................................... 1414
  Andrea Carboni, Alessandro Pigani
Project & Construction Management II

Best Practices for Planning and Executing Complex Brownfield Outages .............................................................. 1419

Neil Tannyan, Thomas Ruffner, Lou Covelli

MAINTENANCE & RELIABILITY

Maintenance & Reliability

Autonomous Maintenance ........................................................................................................................................... 1426

Lyle Bufogle

Sublances: New Conceptions for Best Performances .................................................................................................... 1431

Breno Maia, Willian Lima, Bruno Santos, Alenísio Alexandre Alves Nogueira, Haroldo Xavier

Improving Gearbox Service Life .................................................................................................................................. 1440

Mike Allega

LUBRICATION & HYDRAULICS

Lubrication & Hydraulics II

Lubrication Technology and Selection for High-Temperature Applications in the Steel Industry .................. 1445

Dustin Greiner, Tim-oliver Mattern

Evaluation of Grease Technology Used in Continuous Casters .............................................................................. 1451

Tim-Oliver Mattern, Dustin Greiner

Improvement of Work Safety and Reduction of Environmental Issues with Fire-Resistant Lubricants in Steel Plants .................................................................................................................................................. 1461

Ronald Knecht

REFRACTORY SYSTEMS

Blast Furnace Refractory Technology

Improving Metallurgical Vessels Efficiency Using Coating Technology ................................................................. 1464

Angelo Cristante, Manoj Kumar Mahapatra, James Mark Frost

Burns Harbor Stove Repairs Using Monolithic Materials ............................................................................................... 1471

Bob Byerman, B. Eschbach, B. Hansen, F. Van Laar, Jesse Carreau

The Role of Ti(C, N) in Retarding Dissolution of Graphite Refractory .................................................................... 1484

Thomas Britt, P. Chris Pistorius

Improve Blast Furnace Safety, Operational Stability and Hearth Wall Preservation with Tailored Taphole Clay Technologies ......................................................................................................................... 1495

Tomás Moreira De Oliveira, Aloísio Simões Ribeiro, William Headrick Jr., Felipe Nonaka
BOF/EAF & Steelmaking Refractory Practice

Hot Repairing MgO-C Self-Flow Castable for BOF Converter with Zero Fume Emission
Carlos Pagliosa, Vanderlúcio Madalena, José Alvaro Sardelli, Marcelo Borges, Victor Carlos Pandolfelli

How 3D Laser Scan is Adding Value and Performance to Refractory Lining Inside the Steel Industry

Phenol-Free Magnesia Carbon/Alumina Magnesia Carbon Refractories for Ladle Lining
Seungseok Choi, Jeongwoo Lee, Dongbaek Kim, Namjun Park

New BOF Solution — Ternium Brazil

Tundish and Flow Control Refractories

Ladle-To-Mold Refractory Design Optimization for the New Caster at Nucor Steel Gallatin
John Rogler, Neil Sutcliffe, Giovanna Busolin, Marcellino Fornasier, Johan Richaud

Development of a New Sustainable Tundish-To-Mold Shroud
Fabienne Ruby-Meyer, Jonathan Foulon, Romuald Mazurier, Martin Kreierhoff, Johan Richaud

Variety of Technologies Applied for Anti-Clogging Submerged-Entry Nozzle
Hiroyasu Niitsuma, Ryota Okazaki, Yukio Ohkawa, Takayuki Matsunaga, Toshiro Horiuchi, Masakazu Iida, Xiaodong Li

MATERIAL HANDLING/TRANSPORTATION & LOGISTICS

Material Handling/Transportation & Logistics

Automatic High-Bay Warehouse for Wire Rod Coils at ABS QWR4.0
Lorenzo Bacchetti, Sami Koivuluoma

CRANES

Cranes

Configuration of Charging and Teeming Cranes: The Features that Make the Difference
Lorenzo Bacchetti

Automatic Scrap Bucket Handling by Charging Crane at ABS Meltshop
Lorenzo Bacchetti, Francesca Foschiani
DECARBONIZATION

Decarbonization

Best Practices to Reduce the Iron and Steel Industry’s CO2 Emissions by 2030
Nicholas Aubry, Ian Cameron, Richard Elliott, Sa Ge, Alisha Giglio, Britt Mackinnon, Mitren Sukhram

The Roadmap from BOF Toward EAF Operation — a Concept Study for an Exemplary European Integrated Plant
Felix Firsbach, Per Lückhoff, Patrick Hansert, Peter Van Der Velden

VIRTUAL PROGRAM

Cokemaking & Ironmaking

Hydrogen-Ready Energiron: The Way to Zero GHG Emissions
Dario Pauluzzi, Ashton Hertrich Giraldo, Luca Tommasi, Alessandro Martinis

The Tenova Hydrogen SmartBurner for Reheating: Analysis of the Industrial Results in TenarisDalmine
Mattia Bissoli, Davide Astesiano, Alessandro Della Rocca, Guido Jochler, Fabio Praolini

Steelmaking

Study of the Temperature and of the Slag Properties Effects on Hot Metal Dephosphorization Efficiency
Caio Vaccari Silva, Elton Volkers Do Espírito Santo, Kessia Paradella, Inamara Amanda Souza Santos, José Roberto De Oliveira

Evaluation of Stirring and Flux Type Influence on Hot Metal Desulfurization Efficiency
Elton Volkers Do Espírito Santo, Flaviani Marculano Marchesi, Kessia Gomes Paradela, Caio Vaccari Silva, Inamara Amanda Souza Santos, Marcelo Lucas Pereira Machado, José Roberto De Oliveira

Development and Application of Waste Gas Model on 210-Ton Converter
Pan Gao, Bin Chen, Tengfei Jiang, Haibo Li, Guibin Huang, Yanhui Sun

Numerical Simulation of Flow Modifier Effect on Fluid Flow Pattern, Wall Shear Stress and Inclusion Removal in a Two-Strand Tundish
Xuefeng Bai, Zhijie Guo, Yanhui Sun, Hongjun Shen

Effect of Basicity on the Phase Composition and Recycling of Steel Slag
Hao Ning, Jingang Liu, Tian Zhihong, Jia Yahan, Kong Xiangtuo, Haibo Li

Investigation on the Cleanliness Control Technology of Martensitic Gas Valve Steel
Min Zhang, Xuefeng Bai, Zhijie Guo, Yanhui Sun, Jianhua Zeng

Dynamic Control of Top-Blowing Gas Jet Velocity by Applying Actuation Gas
Nobuhiko Oda, Yumi Murakami, Shingo Sato, Goro Okuyama, Takeshi Murai, Naoki Kikuchi

Multiple-Reacto Approach Dynamic Basic Oxygen Steelmaking Process
Prasenjit Singha, Ajay Kumar Shukla
Danieli’s Latest Dynamic Soft Reduction Technology for Bloom Continuous Casting at Baoshan  
Iron and Steel Co. Ltd. ........................................................................................................ 1694  
Pierluigi Armenante, Przemyslaw Remigiusz Pardela, Raul Dose, Valeria Daneluzzi, Loris Busolini, Qingyu Meng

Super-Strong Babbitt ....................................................................................................... 1704  
Michele Marchetti, Enrico Veronesi, Filippo Pelizzo

**Refining & Casting**

Evolution of Steel Chemistry and Cleanliness During RH Degassing Process ........................................... 1713  
Diti Garg, P. P. Sahoo, P. K. Tripathi, Biswajit Ghosh, Hitesh Hasmukhrai Shah, N. N. Viswanathan, Deepoo Kumar

Ladle Steelmaking Processes Using FactSage and Its Macro Facility ...................................................... 1723  
Prasenjit Singh, Sunil Yadav, Ajay Kumar Shukla

Enhanced Blast Furnace Through Syngas Injection from Natural Gas: A New Era for Blast Furnace  
Technology Enabling Reduced GHG Emissions, OPEX Improvements, Efficient Carbon Capture  
and Lean Gas Valorization ................................................................................................. 1729  
Marco Perato, Fabio Cravino, Peter Kinzel, Cristiano Castagnola

Advances in Cored Wire Injection and Calcium Treatment in Steelmaking ............................................. 1739  
Edgar-Ivan Castro-cedeño, Alexandre Carré, Jose Lujan

**Rolling & Processing**

Danieli’s Leveler: The Latest Generation for Extended Capability Range ............................................... 1746  
Enrico Zambon, Alexander Meyer, Enrico Crisa, Marco Mossutti

Strip Steering Control — a Cutting-Edge Technology for Hot Strip Mills ................................................. 1753  
Olaf Norman Jepsen, Christian Mengel, Michael Breuer

New Heavy Plate Mill Project at Nucor Steel Brandenburg .................................................................... 1761  
Enrico Zambon, Paulo Da Costa, Lorenzo Lusina, Marco Mossutti

**Metallurgy — Steelmaking & Casting**

Injecting Metallic Calcium into Steels: Is it a Massive Solution? .............................................................. 1769  
Jorge Petroni

Thermodynamic Simulations to Predict the Susceptibility of the Inclusion Formation in Steel  
Production Process ........................................................................................................... 1783  
M. S. Oliveira, José Roberto De Oliveira, Felipe Fardin Grillo, R. M. Souza, Estefano Aparecido Vieira

High Phosphorus Content Control Technology at the End of the Converter Blowing: Principle and  
Application .......................................................................................................................... 1792  
Pan Gao, Haibo Li, Xiaodong Zhao, Tengfei Jiang, Yanhui Sun

Research on Tundish Capacity Expansion and Process Optimization of Single-Strand Slab Caster .......... 1800  
Jingang Liu, Hao Ning, Zhang Lijun, Wang Zhenming, Chu Rensheng, Li Zhanjun
Digitalization

Detection of Stirring at Low Flowrates Using Acoustic Sensors ................................................................. 1814
Rohini Kadam, Geoffrey Brooks, Michelle Dunn, David Sly

Porosity in Iron Ore Sintering .......................................................................................................................... 1821
Isis Ignacio, Geoffrey Brooks, Mark Pownceby, M. Akbar Rhamdhani, W. John Rankin

Application Bottleneck and Optimization of Big Data Technology in Blast Furnace Ironmaking ............... 1831
Yong Deng, Ran Liu, Qing Lyu, Fu-Long Liu, Liang-yuan Hao
