# Table of Content

<b>Preface</b>	<b>10</b>
<b>List of Sponsors and Exhibitors</b>	<b>11</b>
<b>Keynote Lectures</b>	<b>12</b>
<b>Session Plan</b>	<b>14</b>
<b>Full Papers</b>	<b>45</b>
Multilevel FEA and BIM for the design of structural steel	46
Extrapolation of Test Data in Time, Size and Risk: A Challenge for Concrete Design Codes	54
UHPFRC is ready to revolutionize existing and new structures	67
The New Storstrøm Bridge – From Tender Requirements to Reality	80
Independent Check and Validation Activities for the New Storstrøm Bridge	88
The New Storstrøm Bridge – Construction Tolerances and Precast	96
Structures Installation Challenges	96
The New Storstrøm Bridge – Pier Design	104
The New Storstrøm Bridge – Prestressed Box Girder Design	112
The New Storstrøm Bridge – Pylon and Stay Cable Design	120
Weathering Steel Bridges – the New European ECCS Design Guide	128
Economical Steel Bridges	136
Structural stress analyses of long-span railway extradosed cable-stayed bridge based on reasonable construction state	141
Methods and technologies for evaluating and minimising noise from road bridge expansion joint	149
Modular composite bridges with integral sheet piling abutments for a time efficient construction	157
Experimental Database on Resistance of Hybrid Joints with High-strength Bolts and Epoxy Adhesive	165
Load transferring mechanism of long riveted joint partially replaced by high-strength bolts	173
Gusset plate between bridge hanger and arch formed by a H rolled section – Design considerations based on numerical analysis	181
Experimental study on the cooperative slip/bearing limit state of high-strength bolted frictional girder connection	189
Development of Ductile Cast Iron Components to Shorten On-site Assembly of Existing Steel Earth-Retaining Beams	196
Active Moment Connection System for Mitigating Wind-Induced Building Vibrations	203
Recent and future trends of onshore wind turbine foundations	210
Development of an accurate low-cost device for structural vibration acquisition	218
Improving of fatigue assessment method of stud shear connectors using experimental data from studs' test of existing road bridge	224

Collapse Fragility Development of Electrical Transmission Towers Subjected to Hurricanes	235
Experimental Study of the Shallow I-Shaped Steel Beam-Column under Combined Loading	243
A state-of-the-art, flexible, easy-to-replace plug-type expansion joint for the Delaware Memorial Bridge	250
Structural Characteristics and Analysis Simulation of New Core Truss Structure	258
Experimental Testing of Mechanical Splices for Titanium Alloy Bars	266
Large-Scale Flexural Testing of Concrete Beams Reinforced with Conventional Steel and Titanium Alloy Bars	272
Short span UHPFRC railway bridge in Switzerland – from design to implementation	277
Design and construction of the “Chaumény” footbridge in posttensioned UHPFRC	285
Development of timber – UHPC composite bridge system	293
Use of fibre reinforced concrete for filler beam sections – potential for structural optimization	301
New UHPFRC Bridges in Czech Republic	309
Structural Health Monitoring of the Çanakkale Bridge in Turkey, the largest monitoring system for the longer bridge in the world	314
Monitoring to secure the Ile-de-Ré Viaduct, France	318
Periodic assessment of an old concrete road bridge based on operational dynamic bridge behaviour with regard to structural integrity and the remaining load bearing capacity	322
A Framework for Automated Bridge Inspections and Assessments with Visual Sensing Technology	330
Monitoring and Assessment of Bridge Cable Stays Consisting of Bundles of Fully Locked Coil Ropes	338
Risk-Based Design of Bridges	346
Shear design of composite columns with sheet metal sections	354
From ETAG to EADs – The ongoing development of the European regulatory system governing the design and manufacture of bridge expansion joints	361
Beam-column behaviour of stainless steel I-section members	369
Safety level of longitudinally stiffened plates under biaxial loading considering different launching bearings and eccentricities	377
Seismic Performance Evaluation of an Existing Low-Rise RC Building after Strengthening using Nonlinear Static Procedure	387
Standardized Seismic Design of Modular High-rise Steel Structure Equipped with Viscous Dampers	395
Development of simplified Bridge-Weigh-In-Motion based on displacement evaluation using an accelerometer	407
Development of a 3D Finite-Element Modelling Generation System Based on Data Processing Platform and Fatigue Analysis of Full-Scale Reinforced-Concrete Bridge	415
Proposal of nonlinear buffeting analysis framework for long-span bridges using Volterra series-based non-stationary wind force model	423
Subsurface defect detection in concretes by active infrared thermography	431
Crack monitoring by fibre optics and image correlation: a pilot study	437
Physics-informed Gaussian process model for Euler-Bernoulli beam elements	445
Damage detection in concrete with coda wave interferometry using a 60 kHz ultrasonic signal	453
Numerical and Experimental Studies on Thermoelectric Energy Harvesters using Temperature Difference in Concrete Bridges	458
Replacing of a steel bridge by rotation around the longitudinal axis	467
Structural analysis of a historical masonry arch railway bridge in Gata de Gorgos, using a generic finite element analysis software	476
The design of the anchoring of the steel double track railway integral bridge in Mechelen contrasting the historical Vierendeel bridges	484
System Identification and Finite Element Model Updating of a Multi-Span Railway Bridge with Uncertain Boundary Conditions	491
Railway bridges – Monuments in the network	499

Fatigue behaviour of cracked concrete decks under cyclic shear loading	507
Fatigue analysis of existing railway bridges: strengthening through geometry improvement	515
Fatigue behaviour of tubular bracings in steel and composite bridges	524
Experimental and numerical investigations on the fatigue behavior of high-strength concrete under combined shear-compression loading	532
The effect of undue transverse welding on the fatigue resistance of hanger connections for steel tied arch bridges	541
Construction Engineering and Repair of the Severely Cracked West Seattle bridge	547
Re-using existing prefabricated prestressed concrete girders in new bridges	554
Assessment of masonry arch bridges	562
Shear performance of replaced bolt shear connectors in prefabricated composite beam	569
D4R7. Prievoz Interchange refurbishment at Bratislava	578
An experimental and numerical approach to investigate the load-deformation behaviour of anchorages with headed fasteners in reinforced-concrete columns	586
An experimental investigation on base-plate joints of steel storage pallet racks	594
Prototype of no-projected and Sandglass-shaped Bolt with High-Strength and Durability for Efficient Steel Structures Maintenance	602
Investigating out-of-plane strength & stiffness of a nailed glulam connection	610
New possibilities with the use of automated laser- laser-hybrid welding methods for steel bridges	618
Influence of design criteria on the seismic response of single-storey steel buildings	624
Evaluation of Seismic Performance and Proposing the Reinforcement Methods for the Bridge with Rocking Piers Penetrating the Railway Platform	637
Experimental study of potential bearing uplift of cable-stayed bridges under earthquakes	645
Evaluation of Spectrum Compatible Bidirectional Seismic Input	654
Dynamic responses and failure pattern of suspended cable tray system through shaking table test	662
Pelješac bridge – Design and construction	670
New Pumarejo Bridge over Magdalena River	678
The Design of the new Storstrøm Bridge: design philosophy, structural concepts, fundamental design and innovative construction methods	686
The Design of the new Storstrøm Bridge: design philosophy, structural concepts, fundamental design and innovative construction methods	686
Process for verification of performance requirements for transport infrastructure	694
The New Little Belt Bridge – the role of the physical model and it's digital twin	702
BIM and BMS: Current Status and Challenges	710
Data driven BIM models in bridges	716
Geometry as a common ground for BMS and BIM	720
Creating digital twins of existing bridges through AI-based methods	727
Bridge Condition Assessment Based on Image Data and Digital Twins	735
Long-term concrete strain measurements of large-scale experiments exposed to environmental effects	743
Strength assessment of prestressed concrete sections under the combined action of internal forces	750
Analysis of Machine Learning for Detect Concrete Crack Depths Using Infrared Thermography Technique	758
Rehabilitation of Earth Retaining Wall for Slope Failure, due to Strength Reduction and Seismic Acceleration, Considering Nonlinear Soil-Structure Interaction	766
Modelling rebar-concrete interaction with an equivalent transition layer	774
Study on Fatigue Durability of Steel Box Girder Corner Plate Weld with Peening	783
Cracking and Fatigue of Heavy Loaded Prestressed Concrete Bridge in Sweden	792

Experimental investigations of welding induced temperature gradients and distortions in a segment of an OSD	800
Behavior of Orthotropic Steel-UHPC Composite Bridge Deck under Cyclic Loading	810
Verification of fatigue load model for stay cables	820
Refurbishing, Strengthening and Retrofitting Façades to Increase Seismic Resistance	829
Strengthening of road composite bridge using Fe-SMA	837
Refurbishment of Franzensbrücke in Vienna- Retrofitting a historical steel arch bridge with composite plate in between limited timeframe, restrictive urban environment, and challenging structural requirements	845
Efficiency of adhesive layers in strengthening schemes of concrete elements	853
Influence of Material Stiffness on Bond Behaviour for CFRP and BFRP Strips Glued to Concrete Surface	860
The assessment and condition survey of concrete prestressed bridges in the Czech railway network	868
Evaluation Methods for the Existing Infrastructure in Germany	876
Condition Assessment of Steel Riveted Roof of Heritage Building in Sofia, Bulgaria	884
Assessment and Retrofitting for Upgrading Existing Infrastructures in Urban Area	889
Assessment of Steel Railway Bridges for Wind and Traffic Load Effects	897
Enhancement in Indian Bridge Management System using analytics within BIM data model	903
Information is for Life not just for BIM Models	911
BMS and BIM: the Portuguese scenario	920
Mega Project – Upgrading the 4 <sup>th</sup> Ring Transportation Corridor in Zhengzhou, Henan, China	928
Correlation between early- and later-age performance indices of early frost-damaged concrete	934
Design-driven Uniaxial and Biaxial Tensile Testing of Knitted Fabrics Applied to Construction	942
European Harmonized Design for Membrane Structures	956
Weathering-induced ageing strength modification factors for PET-PVC-fabrics	963
Stainless Steel Bars as Reinforcement	970
TQL Stadium for FC Cincinnati	976
Design and construction of the Second Hinterrhein-Bridge	984
How truck-platooning changes the extreme values of load-effects in single-span bridges	992
ViA15 (A12/A15   Arnhem   Netherlands): Design and structural behaviour analysis of a balanced cantilever bridge with a below suspended bicycle and pedestrian bridge	1000
Building bridges from thin-walled precast elements	1008
Integral VFT-RS composite bridges – Efficient standard highway overpasses	1013
New Prague footbridge connecting the districts of Holešovice and Karlín	1021
Neby bru: one footway, three ways of sustainability	1025
Analysis of the Florida International University Pedestrian Bridge Collapse	1033
Bru over Otra, a new footbridge in Kristiansand (Norway)	1039
Pedestrian bridge over the River Elbe in Hradec Králové	1047
ABOVE OR BELOW – this is the QUESTION	1053
1 Triton Square – Structural reuse for low-carbon architecture	1063
Education City Stadium, Doha, Qatar	1071
3D scanning applications in structural design	1079
Challenges of a Bridge Design in Tight Urban Areas	1087
Stochastic degradation model analysis for prestressed concrete bridges	1092
Through constructions on arched bridges	1100
Torsion of a Norwegian bridge with partial box-action – a case study	1108
Evaluation of Riveted Railway Bridge Using Experimental-Numerical Analyses	1115

Available Tests to evaluate Residual Prestressing Forces in Concrete Bridges	1123
Quasi-static load bearing behaviour of hybrid grouted joints	1132
Proposal of ultrasonic bolt axial force evaluation method using machine learning and signal processing	1140
Advancement of Eddy Current Based Evaluation of Axial Force of High-Strength Bolts	1148
Durability Of Rock And Soil Anchor Kits Using Prestressing Steel Strands	1156
Improvement of high slip coefficient of the combined joint using adhesive and high strength frictional bolts	1164
Rehabilitation and Strengthening of Bridges over Boa Vista River	1172
Potential of memory steel reinforcement for shear strengthening of concrete bridge girders with I-secti	1180
Repair effect of externally bonded CFRP on propagation life of fatigue cracks initiated at in-plane welded gusset joints	1188
Temperatures during Weld Repair on Orthotropic Steel Decks	1196
Influence of Anchor Length and Drilled Hole on Mechanical Behaviour of Masonry Column Structures Strengthened with Bonded Anchor	1204
Fly ash Based Banana Fiber-reinforced Geopolymer Mortar	1212
Mechanical Performance of Treated Bambusa Blumeana (Bamboo) Fibers	1220
SporX – Design and construction of a ten-storey timber building in Drammen, Norway	1226
Control of Fatigue in Hydraulic Steel Structures	1234
Property Analysis of Link Slab in Steel-Concrete Composite Bridge	1242
Braila Suspension Bridge: Construction Methodology of the Pylons	1251
The New City Bridge in Drammen, Norway. Designing a new urban landmark for an extreme environment	1257
Reconstruction of the Vilemov Viaduct on the railway line Rumburk – Sebnitz	1265
The new City Bridge of Drammen: A structural insight	1270
Quisi Bridge: a new route for the railway line in Alicante, Spain	1278
Standardization of structural performance monitoring: existing documents and open questions	1285
Latest trends for condition assessment using non-destructive techniques	1292
Numerical model updating of an aging steel bridge based on a multidisciplinary experimental campaign	1300
Review of the current state of standardisation on monitoring, data – informed safety assessment and decision-making regarding maintenance of the transport infrastructure	1309
Future perspectives of standardisation for a safe European transport infrastructure	1314
Advanced modelling of concrete bridges	1321
New beam element for horizontally curved steel-concrete composite box girder bridges	1329
Toward Crack-based Assessment of Shear-distressed Reinforced Concrete Infrastructure	1337
Design for Manufacturing and Assembly-Oriented Parametric Modelling of Prefabricated Bridges	1345
Resource efficient reinforcement concept for precast tunnel segments	1352
Influence of large-scale asperities on the stability of concrete dams	1358
Assessment of Scour Risk in Hydraulic Infrastructures. A Bridge Case Study	1366
Shear design in concrete beams without transverse reinforcement – A comparative study	1374
Fatigue-resistant design of modular bridges made of precast concrete elements	1382
Finite element analysis of wind turbine tower with a tapered cross-section using various finite element models	1390
Application of Abaqus secondary development 1 in finite element analysis of rebar behavior in reinforced concrete member	1396
Evaluation of Prestressed Reinforced Concrete Slab Punching Shear Using Finite Element Method	1404
Numerical Investigation of Slab-Column Connections with Various Reinforcement Ratios	1410
Nonlinear Analysis of Reinforced Concrete Structural Elements	1419
Advanced analysis of a pedestrian bridge and considerations on crowd-structure interaction	1427

The New Storstrøm Bridge – Nonlinear Dynamic Ship Impacts	1435
Vehicle-bridge interaction: Influence of the train type on the dynamic response of bridges due to a train crossing	1444
Effect of skew wind on curved long-span floating bridges	1452
Approach for the mathematical calculation of the damping factor of railway bridges with ballasted track	1460
Kagraner Steg – New GFRP Pedestrian Bridge in Vienna	1468
Tensile strength of the bent portion of vinyl ester GFRP rebars	1476
Tests of Glass Banister Panels with Embedded Laminated Connections	1482
STABILITY & RESISTANCE OF HYBRID GLASS STRUCTURES UNDER SEISMIC & TEMPERATURE LOADS	1487
Adhesive Acrylate Metal-Glass Connections: Influence of Temperature and Thickness of Adhesive Layer	1495
Wiwili Bridge: A balanced cantilever bridge in a high seismic risk area	1503
Evaluation of Non-Prismatic Open Cross-Section Bridge Arch for the Toronto Port Lands Bridges	1511
“La Concordia” outstanding arch bridge in Valdebebas, Madrid	1519
D4R7. New Danube Crossing at Bratislava	1527
Addressing Design and Construction Challenges for a Complex Elevated Interchange over the Sea	1535
Nonlinear soil–structure interaction of retaining walls with pulse-like earthquakes	1543
Nonlinear Behavior Identification of HDR-S Bearing Using Neural Network for Seismic Structural Design	1551
Wind & Seismic Design of a Steel Preheater Tower – Adapting Ductility Capacity to Demand	1559
A Hysteretic Model of Compressive and Tensile Behavior for Laminated Rubber Bearings	1567
A Thermo-mechanical Coupled Model of Hysteresis Behavior of HDR Bearings	1574
Alternative approach for additional damping in dynamic calculations of railway bridges under high-speed traffic	1582
Dynamic Analysis and Innovative Design of a Kilometer-Long Highway Bridge under Extreme Landslide Generated Wave Loading	1590
Vibration Response due to Group Movements on a Footbridge	1598
Prediction of Floor Vibration Response due to Walking Excitation	1604
Indirect estimate of concrete compression strength framework with FE model updating and operational modal analysis	1611
Development of an orthotropic composite slab system for road bridges	1619
Externally prestressed concrete: anchor block 3D yield design	1627
Kinematics-based model for complete behavior of RC dapped-end connections failing along a re-entrant corner crack	1635
On the use of Volterra series for modelling of nonlinear self-excited forces	1643
A Parametric Study of an old Concrete Trough Bridge using non-linear Finite Element analysis	1652
Relating stress concentrations in triangular steel bridge piers to simple beam models	1660
Full-scale Fatigue Simulations for Reinforced Concrete Bridge Slabs with Multi-scale FEM System with Solid-Liquid Two Phase Model	1668
Computational Sensitivity Analysis for Construction Stage Models	1676
Horizontal bracing in steel I-girder bridges with composite concrete decks	1684
An Engineering Approach to Analyze Displacement Rate in Embedded Rail System Coupled with Bridge	1691
The role of key structural components such as bearings, expansion joints, dampers and STUs in addressing the challenges faced by railway bridges	1699
Semi-Precast Segmental Bridge Construction Method: construction of a prototype and shear tests on cross-frames	1707
Ultimate and Nominal Strength Capacity Evaluation of Composite Sections with Arbitrary Shapes at Elevated Temperatures	1715
Cost and process optimization of precast segmental bridges in Israel	1723

Role of Heritage Building Information Management in Indian Urban Infrastructure	1730
Design and construction of a flyover for the SAAR Interchange in Bahrain	1738
Load Sharing System Performance Considering Structural Members Contribution in Plate Girder Bridges with Corrosion Damages	1747
Design and behavior analysis of a long free expansion length, multi-span, V-shaped pier supported bridge	1755
Loss of cable – design criteria for cable stayed bridges	1763
New developments in the design of Z-shaped steel sheet pile walls	1772
Practical Guidance for Design of Steel Truss Footbridges	1780
Design methodology for Roads Bridges located on Chilean copper miner roads	1789
Quantifying the Environmental Impact of Railway Bridges Using Life Cycle Assessment: A Case Study	1796
State of the art of typologies of piers and abutments of existing Chilean road bridges, considering the risk of scour	1804
Laser- and laser-hybrid welding of steel bridge structures	1812
An analysis of the potential for improving cement efficiency through functionally graded concrete elements with durability-driven concrete specification	1820
Resolution improvement of Low-Cost MEMS accelerometer by aligning Simulations sensors	1830
Chandigarh-Kharar Elevated Road – A Case Study	1836
Application of Damped Outriggers in Renovation of Super Tall Building Structures	1844
The Implementation Potentials of BIM in Bridge Maintenance Workflows	1851
Combined LOD-Definition for Bridge Maintenance and 3D City Maps	1859
BIM authoring and Data Models for Bridge Maintenance Systems in Korea	1867
Torsional buckling strengthening in cruciform columns	1873
Fabrication of a device testing bonded joint strength under combined stress	1882
Experimental and numerical study on unequal lateral impact behavior of Circular RC and CFRPRC components	1890
Izmit Bay Suspension Bridge – Response of Active Mass Damper Using Finite Element Analysis	1898
Intelligent building contract tendering – potential and exploration	1902
Hyperbox Modelling for Externally Bonded Carbon Fibre Reinforced Polymers on Beams	1910
Seismic Detailing of Single Span Bridges to AASHTO Standards for the State of Nevada, USA	1919
Experimental Design of Link Slab in Steel-Concrete Composite Bridge	1926
Damage investigation through dynamic characteristics of existing bridge deck panels	1935
Improvements in chloride determination in reinforced concrete structures to find optimal time for remediation	1942
<b>Scientific and Organising Committee</b>	<b>1948</b>
<b>Author Index</b>
