

Workshop on Intelligent Computing in Engineering (EG-ICE 2021)

Berlin, Germany and Online
30 June – 2 July 2021

Editors:

**Jimmy Abualdenien
Andre Borrmann**

**Lucian Constantin Ungureanu
Timo Hartmann**

ISBN: 978-1-7138-5547-7

Contents

Application of AI methods for the integration of structural engineering knowledge in early planning phases	1–11
Martina Schnellenbach-Held and Daniel Steiner	
Analysis of the early-design timber models for sound insulation analysis	12–21
Camille Chateauvieux-Hellwig, Jimmy Abualdenien and André Borrmann	
Framework proposal for automated generation of production layout scenarios: A parametric design technique to connect production planning and structural industrial building design	22–33
Julia Reisinger, Maria Antonia Zahlbruckner, Iva Kovacic, Peter Kán and Xi Wang-Sukalia	
Component-based machine learning for predicting representative time-series of energy performance in building design	34–43
Xia Chen, Manav Mahan Singh and Philipp Geyer	
A hybrid-model time-series forecasting approach for reducing the building energy performance gap	44–53
Xia Chen, Tong Guo and Philipp Geyer	
Deep learning approach for predicting pedestrian dynamics for transportation hubs in early design phases	54–65
Jan Clever, Jimmy Abualdenien and André Borrmann	
Implementing Information Container for linked Document Delivery (ICDD) as a micro-service	66–75
Madhumitha Senthilvel, Jyrki Oraskari and Jakob Beetz	
An explanatory use case for the implementation of Information Container for linked Document Delivery in Common Data Environments	76–86
Janakiram Karlapudi, Prathap Valluru and Karsten Menzel	
Automatic generation of ISO 19650 compliant templates based on standard construction contracts	87–97
Thomas Bower, Alan Rawdin, Xiaofeng Zhu and Haijiang Li	
Graph-based version control for asynchronous BIM level 3 collaboration	98–107
Sebastian Esser, Simon Vilgertshofer and André Borrmann	

Image-documentation of existing buildings using a server-based BIM Collaboration Format workflow Oliver Schulz and Jakob Beetz	108–117
Unlocking the full potential of Building Information Modelling by applying the principles of Industry 4.0 and Data Governance such as COBIT Adrian Wildenauer and Josef Basl	118–134
Data Quality in Building Productivity Assessment – the Case of Acute Care Environments Jack Morewood, Pieter de Wilde and Matthew Bacon	135–145
An Approach for Cross-Data Querying and Spatial Reasoning of Tunnel Alignments Marcel Stepjen, Andre Vonthron and Markus König	146–155
Ontological reasoning in factory-BIM: An industrial case study for an automotive OEM Jeremias Merz and Timo Hartmann	156–165
IFCNet: A Benchmark Dataset for IFC Entity Classification Christoph Emunds, Nicolas Pauen, Veronika Richter, Jérôme Frisch and Christoph van Treeck	166–175
IFC based Framework for Generating, Modeling and Visualizing Spalling Defect Geometries Mathias Artus, Mohamed Said Helmy Alabassy and Christian Koch	176–186
Automatic generation of IFC models from point cloud data of transport infrastructure environments Andrés Justo, Mario Soilán, Ana Sánchez-Rodríguez and Belén Riveiro	187–196
A Proposed Ontology for Knowledge Representation in Designing Indoor Inspection Robot Systems Leyuan Ma and Timo Hartmann	197–206
Bidirectional coupling of Building Information Modeling and Building Simulation using ontologies Elisabeth Eckstädt	207–217
Building Ontology for Preventive Fire Safety Isabelle Fitkau and Timo Hartmann	218–227
A Framework for Intelligent Building Information Spoken Dialogue System (iBISDS) Ning Wang, Raja R. A. Issa and Chimay J. Anumba	228–237
A Design Recommender System: A Rules-based Approach to Exploit Natural Language Imprecision using Belief and Fuzzy Theories Lucian-Constantin Ungureanu	238–249
Towards the Adoption of Vision Intelligence for Construction Safety: Grounded Theory Methodology based Safety Regulations Analysis Numan Khan, Muhammad Khan, Seungwon Cho and Chansik Park	250–259

Concept to support the estimation of static load capacity on construction site using in-situ AR-based methods	260–269
Christian-Dominik Thiele, Tim-Jonathan Huyeng, Pascal Mosler and Uwe Ruppel	
Using eye-tracking to compare the experienced safety supervisors and novice in identifying job site hazards under a VR environment	270–280
Yewei Ouyang and Xiaowei Luo	
Virtual Reality Platform for 3D Irregular Packing Problem	281–290
Yinghui Zhao, Juhyeong Ryu, Carl Haas and Sriram Narasimhan	
Reference Architectural Model of Buildings for Virtual City Creator	291–300
Agnieszka Mars, Ewa Grabska, Jan Bielański, Paweł Mogiła and Michał Mogiła	
Data shortage for urban energy simulations? An empirical survey on data availability and enrichment methods using machine learning?	301–309
Gerald Schweiger, Johannes Exenberger, Avichal Malhotra, Thomas Schranz, Theresa Boiger, Christoph van Treeck and James O'Donnell	
End-to-End Framework in Support of Virtual Design-Engineering-Manufacturing-Construction Space Exploration	310–319
Ebrahim Eldamhhoury, Lewis Healy and Renate Fruchter	
Accuracy Aspects when Transforming a Boundary Representation of Solids into a Tetrahedral Space Partition	320–329
Joanna Zarah Vetter and Wolfgang Huhnt	
The influence of topology optimisation's design space—from shell to volume—on the generation of structural systems	330–339
Herm Hofmeyer, Diane Schoenmaker, Sjonnie Boonstra and Pieter Pauwels	
Qualifying spatial information for underground volumes	340–349
Kamel Adouane, Fabian Boujon and Bernd Domer	
An algorithmic BIM approach to advance concrete printing	350–359
Patricia Peralta Abadia and Kay Smarsly	
A methodological approach to generate robot control algorithms from BIM-Models	360–369
Nicolas Mitsch, Karsten Menzel and Adrian Schubert	
Multi-Level LoD Parametric Design Approach in AEC for Robot-Oriented Construction	370–379
Adrian Schubert, Karsten Menzel and Nicolas Mitsch	
Design and implementation of an optimal sensor system as part of a Digital Twin for a rotary bending machine	380–389
Daniel Haag, Heiko Beinersdorf and Carsten Könke	
The Effects of Fracture Energy on the Interfacial Strength of Self-Healing Concrete	390–400
John Hanna	

A Performance Metric for the Evaluation of Thermal Anomaly Identification with Ill-Defined Ground Truth	401–410
Burak Kakillioglu, Yasser El Masri, Chenbin Pan, Eleanna Panagoulia, Norhan Bayomi, Kaiwen Chen, John E. Fernandez, Tarek Rakha and Senem Velipasalar	
Areas of Interest - Semantic description of component locations for damage assessment	411–420
Al-Hakam Hamdan and Raimar Scherer	
Deep Neural Networks for visual bridge inspections and defect visualisation in Civil Engineering	421–431
Julia Bush, Tadeo Corradi, Jelena Ninić, Georgia Thermou and John Bennetts	
Automated decision making in structural health monitoring using explainable artificial intelligence	432–441
José Joaquín Peralta Abadía, Henrieke Fritz, Georgios Dadoulis, Kosmas Dragos and Kay Smarsly	
VOX2BIM - A Fast Method for Automated Point Cloud Segmentation	442–450
Jan Martens and Jörg Blankenbach	
Automated Generation of Railway Track Geometric Digital Twins (RailGDT) from Airborne LiDAR Data	451–463
M.R. Mahendrini Fernando Ariyachandra and Ioannis Brilakis	
Deriving Digital Twin Models of Existing Bridges from Point Cloud Data Using Parametric Models and Metaheuristic Algorithms	464–474
M. Saeed Mafipour, Simon Vilgertshofer and André Borrmann	
Building a balanced and well-rounded dataset for railway asset detection	475–485
Felix Eickeler and André Borrmann	
Panorama-to-digital twin registration using semantic features	486–496
Yujie Wei and Burcu Akinci	
AI-based thermal bridge detection of building rooftops on district scale using aerial images	497–507
Zoe Mayer, James Kahn, Yu Hou and Rebekka Volk	
Image Captioning in Chinese for Construction Activity Scenes Understanding Using a Pre-trained Cross-modal Language Model	508–519
Yuexiong Ding and Xiaowei Luo	
Process Pattern-based Hybrid Simulation for Emission Estimation of the Construction Processes	520–529
Danh Toan Nguyen	
Automatic image analysis of mineral construction and demolition waste (CDW) using machine learning methods and deep learning	530–539
Jurij Walz, Elske Linß and Carsten Könke	

Fast Crack Detection Using Convolutional Neural Network	540–549
Jiesheng Yang, Fangzheng Lin, Yusheng Xiang, Peter Katranuschkov and Raimar Scherer	
An Integrated Computational GIS Platform for UAV-based Remote Building Façade Inspection	550–560
Kaiwen Chen, Xin Xu, Georg Reichard and Abiola Akanmu	
A Computer Vision Approach for Building Façade Component Segmentation on 3D Point Cloud Models Reconstructed by Aerial Images	561–571
Yu Hou, Zoe Mayer, Zhaoyang Li, Rebekka Volk and Lucio Soibelman	
Feasibility Study of Urban Flood Mapping Using Traffic Signs for Route Optimization	572–581
Bahareh Alizadeh, Diya Li, Zhe Zhang and Amir Behzadan	
Developing indicators for measuring the effectiveness of visualizations applied in construction safety management using eye-tracking	582–591
Yewei Ouyang and Xiaowei Luo	
Real-time LiDAR for Monitoring Construction Worker Presence Near Hazards and in Work Areas in a Virtual Reality Environment	592–602
Emil Jacobsen and Jochen Teizer
