Volume 12768

Proceedings of SPIE 0277-786X, V. 12768

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Holography, Diffractive Optics, and Applications XIII*, edited by Changhe Zhou, Ting-Chung Poon, Liangcai Cao, Hiroshi Yoshikawa, Proc. of SPIE 12768, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix *Symposium Committees*
xiii *Conference Committee*

HOLOGRAPHY AND META HOLOGRAPHY

12768 03 **Fast calculation techniques of computer-generated hologram for line-drawn 3D objects (Invited Paper)** [12768-2]

HOLOGRAPHY I

12768 09 **Holographic video display using budget video projector (Invited Paper)** [12768-12]
12768 0B **Increasing the concentration of photosensitizer to improve holographic properties of photopolymer materials** [12768-14]
12768 0C **Detection of counterfeit holograms using hyperspectral imaging** [12768-15]
12768 0D **Investigation of photopolymers with nano-diamonds** [12768-16]

HOLOGRAPHY II

12768 0E **Different strategies for down-sampling computer-generated holograms (Invited Paper)** [12768-17]
12768 0F **Holographic wavefront sensor based on diffuse Fourier hologram** [12768-18]
12768 0G **A review of hologram calculation methods based on physical diffraction models** [12768-19]
12768 0H **Imaging of MEMS morphology and deformation based on digital holography** [12768-20]

3D DISPLAY

12768 0K **Optimized real-time complex-amplitude holographic display based on computer-generated holograms (Invited Paper)** [12768-23]
12768 0N **High-speed 3D hologram generation method via convolutional neural network** [12768-26]

AR/VR APPLICATIONS

- 12768 0O **Holographic optical elements fabrication for AR display based on common-path interference** [12768-27]
- 12768 0P **Unified phase-space framework for near-eye displays** [12768-28]

MEASUREMENT

- 12768 0R **Dual optical frequency combs generation with frequency-shifted feedback laser, method, and applications** [12768-31]
- 12768 0S **Production of axially symmetrical structured light in polarization interferometer** [12768-32]

OPTICAL NEURAL NETWORKS

- 12768 0X **Deep learning-assisted slightly off-axis digital holographic quantitative phase imaging** [12768-38]
- 12768 0Y **Physics informed neural network with Fourier basis for computer-generated hologram synthesizing** [12768-39]

OPTICAL COMPUTING

- 12768 0Z **Matrix convolutional operation architecture based on optical Fourier transform** [12768-41]
- 12768 1O **Multilayer optoelectronic hybrid convolutional neural network with an optical 4f-system recurrent structure** [12768-42]

IMAGING II

- 12768 15 **Modular digital holographic microscopy (Invited Paper)** [12768-47]
- 12768 19 **Single-shot broadband phase retrieval with coherent modulation imaging** [12768-51]
- 12768 1A **Correlation assisted in-line holographic imaging through scattering medium** [12768-52]

DIFFRACTIVE OPTICS I

- 12768 1B **Diffraction gratings with full amplitude, phase, and polarization control: physical realization on liquid-crystal spatial light modulators (Invited Paper)** [12768-53]
- 12768 1D **Preparing polarization grating based on polarization holography** [12768-55]
- 12768 1F **Autofocusing of Fresnel zone aperture lensless imaging based on image sharpness metrics** [12768-57]

DIFFRACTIVE OPTICS II

- 12768 1G **Triplicator phase grating implementation in pixelated displays (Invited Paper)** [12768-58]
- 12768 1H **Steady optical beam in turbulence** [12768-59]
- 12768 1I **Nano-wire bridge waveguide-assisted silicon polarizing beam splitter** [12768-60]
- 12768 1J **Design and fabrication of infrared holographic optical elements with both beam splitting and convergence functions** [12768-61]

MICROSCOPY

- 12768 1N **Diffraction tomography based on Fourier ptychographic microscopy with the multiple scattering model** [12768-65]

GRATINGS

- 12768 1Q **Picometer optical measurement technology based on the concept of picometer comb** [12768-68]
- 12768 1S **Polarization-independent double-layer transmission two-dimensional slanted grating under normal incidence** [12768-70]
- 12768 1T **Phase calculation of diffraction grating based on RCWA** [12768-71]
- 12768 1U **Polarization-independent high-efficiency two-dimensional metal-dielectric grating by frustum array** [12768-72]
- 12768 1V **Research on automatic detection method for surface defects of large-size gratings** [12768-73]

POSTER SESSION

- 12768 1W **Design of processable diffractive optical elements for hyperspectral imaging based on physical model driving** [12768-74]
- 12768 1X **Beacon wavelength selection for wavefront detection in horizontal path under strong turbulence** [12768-75]
- 12768 1Y **The recording and reconstruction of fractional Fourier transform holograms** [12768-76]
- 12768 1Z **Diffraction characteristics of a pixelated spatial light modulator for wave field reconstruction** [12768-77]
- 12768 25 **Speckle denoising of digital holographic interferometry via integrated CycleGAN** [12768-83]
- 12768 26 **On-chip 4F-system based on concave mirrors for optical neural networks** [12768-84]
- 12768 27 **Phase front reconstruction by optical phase conjugation** [12768-85]
- 12768 29 **Thermochemical laser writing of chromium grayscale masks and their application for fabrication of multilevel diffractive optical elements** [12768-88]
- 12768 2A **Iterative phase hologram generation with adaptive weighted constraints for color holographic display** [12768-89]
- 12768 2B **All dielectric metasurface-based diffractive neural networks all optical computing** [12768-90]
- 12768 2C **Aberration compensation-enabled large-scale antiferromagnetic spatial photonic Ising machine** [12768-91]
- 12768 2D **Single-shot iterative twin image removal method in partially coherent illumination in-line digital holography** [12768-92]
- 12768 2F **Reading between the lines: interpolation as it impacts ringing suppression** [12768-96]

DIGITAL POSTER SESSION

- 12768 2G **Multichannel polarization-independent vortex beams generation via all-dielectric metasurface** [12768-5]
- 12768 2H **Spin-encoded multifunctional meta-holographic display** [12768-6]
- 12768 2I **Broadband all-dielectric meta-devices for visible perfect vortex beams generation** [12768-8]
- 12768 2J **Broadband twisted light beams generation using flat optics** [12768-9]

- 12768 2K **Multifunctional all-dielectric nanosurfaces for generation and detection of focused optical vortices** [12768-11]
- 12768 2L **Adaptive control of fast steering mirror with high acceleration trajectory** [12768-30]
