**Volume 13132**

Proceedings of SPIE 0277-786X, V. 13132

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Nonimaging Optics: Efficient Design for Illumination and Concentration XIX*, edited by Roland Winston, Lun Jiang, Håkon Jarand Dugstad Johnsen, Thomas A. Cooper, Proc. of SPIE 13132, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## ILLUMINATION

- 13132 02 **Predicting freeform surface topologies for illumination applications via deep learning (Invited Paper, Best Student and Postdoc Presentation Award) [13132-4]**
- 13132 03 **Mixing rod with embedded mirrors [13132-49]**
- 13132 04 **MonaLIGHT: broadband, non-coherent laser-based illumination designed for instrumentation and étendue restricted applications [13132-3]**
- 13132 05 **Quantum dot design for display applications [13132-5]**

---

## RADIATIVE ENERGY CONVERSION

- 13132 06 **Colloidal lithography patterning of silicon-based solar absorber [13132-11]**

---

## CONCENTRATOR DESIGNS

- 13132 07 **Review of micro concentrator photovoltaics technology: optics [13132-18]**

---

## NEW CONCEPTS

- 13132 08 **Cylindrically-symmetric collimated beam shaping using non-imaging metasurfaces [13132-19]**

---

## NUMERICAL AND FREEFORM METHODS

- 13132 09 **Designing freeform Fresnel lenses with continuous facets [13132-24]**
- 13132 0A **Techniques in flowline optics: towards calculating étendue from flowlines [13132-26]**

---

#### NOVEL APPLICATIONS

---

- 13132 0C    **Solar heat for materials processing: building a 1 kW demonstration prototype** [13132-30]

---

#### HELIOSTAT OPTICAL METROLOGY

---

- 13132 0D    **Ultrafast heliostat metrology** [13132-34]

---

#### HELIOSTAT OPTIMIZATION AND INNOVATION

---

- 13132 0E    **Static metrology of the meter-scale deformable heliostat** [13132-42]
- 13132 0F    **Performance of the first mechanically-coupled twisting heliostat: encircled energy vs angle of incidence, and closed loop tracking** [13132-40]
- 13132 0G    **Design, performance, and field operation of twisting heliostats for 3,000-sun concentration and high temperature** [13132-41]

---

#### POSTER SESSION

---

- 13132 0H    **Evaluation of the thermal efficiency of ethylene glycol/magnetite nanofluids for use in direct absorption solar collectors** [13132-45]
- 13132 0I    **Design and comparative analysis of hybrid heliostat-parabolic system** [13132-46]
