Volume 13493

Proceedings of SPIE 0277-786X, V. 13493

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *AOPC 2024: Infrared Technology and Applications*, edited by Xue Li, Xin Tang, Proc. of SPIE 13493, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v Conference Committee

INFRARED TECHNOLOGY AND APPLICATIONS

- 13493 02 **A design of temporally and spatially modulated infrared Fourier transform imaging spectrometer using subpixel supersampling** [13493-1]
- 13493 03 **The operation and maintenance mechanism of smart classrooms in universities based on the cloud-edge-end architecture of the Internet of Things** [13493-2]
- 13493 04 **Fusion of wavelet packet-fuzzy contraction and whale optimization algorithm for hemoglobin spectral feature extraction** [13493-3]
- 13493 05 **Infrared target detection based on 5-D spatial-temporal knowledge** [13493-4]
- 13493 06 **External ring cavity interband cascade lasers for broadband gas sensing** [13493-5]
- 13493 07 **Design of hardware accelerator for target recognition convolutional neural network based on DSP+FPGA architecture** [13493-6]
- 13493 08 **Simulation of infrared radiation characteristics of ballistic missiles in all stages based on all-directional detectors** [13493-7]
- 13493 09 **Simulation of infrared radiation characteristics and dynamic imaging of space targets based on spaceborne detection** [13493-8]
- 13493 0A **Research on the infrared radiation characteristics of the tail flame of hypersonic aircraft and the detection range of space-based infrared warning satellites** [13493-9]
- 13493 0B **Numerical calculation of temperature distribution and infrared radiation characteristics of buildings** [13493-11]
- 13493 0C **Research on modeling methods of infrared radiation characteristics of sea surface targets** [13493-12]
- 13493 0D **Zn diffusion mechanism in InGaAs infrared detector** [13493-15]
- 13493 0E **Research on high linearity analog counter for digital pixel circuit** [13493-16]
- 13493 0F **Categorized visible-to-infrared image generation based on physical properties of different targets** [13493-17]

- 13493 OG **High-speed clock generator for digital readout circuit** [13493-18]
- 13493 OH **A high-precision, low-power, high-speed, single-slope ADC for infrared FPA digital readout circuit** [13493-24]
- 13493 OI **Research on dual-band infrared image fusion based on Planck's radiation law** [13493-27]
