**Volume 13500**

Proceedings of SPIE 0277-786X, V. 13500

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *AOPC 2024: Micro-Nano Optics*, edited by Min Qiu, Proc. of SPIE 13500, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510687899

ISBN: 9781510687905 (electronic)

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

## MICRO-NANO OPTICS

---

- 13500 02 **Study on the influence of alkaline corrosion process on the uniformity of white-light neutron microchannel plate** [13500-1]
- 13500 03 **Mode-splitting of size-mismatched coupling microspheres** [13500-2]
- 13500 04 **Synthesis of PbSe quantum dots and characterization of the nonlinear optical properties** [13500-3]
- 13500 05 **Analysis of band-gap and photoluminescence performance of low-symmetry InGaAsP photonic crystal** [13500-4]
- 13500 06 **Design and simulation of a four-band polarization-insensitive terahertz absorption metamaterial** [13500-5]
- 13500 07 **Spectral sensitivity analysis of the conventional prism-based SPR sensor** [13500-6]
- 13500 08 **Metasurfaces for nonlinear Brillouin light scattering** [13500-7]
- 13500 09 **The elimination of polarization-dependent crosstalk between radial displacements of levitated nanospheres in optical tweezers in vacuum** [13500-8]
- 13500 0A **Single-polarization single-mode photonic crystal fiber based on Sierpiński gasket without holes in the cladding** [13500-9]
- 13500 0B **Automatic measurement of particle size based on scanning electron microscopy** [13500-10]
- 13500 0C **Tunable SiO<sub>2</sub>-VO<sub>2</sub> metasurfaces for multidimensional structural color control in optical applications** [13500-11]
