Volume 13502

Proceedings of SPIE 0277-786X, V. 13502

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](https://spiedigitallibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *AOPC 2024: AI in Optics and Photonics*, edited by Hongwei Chen, Xingjun Wang, Proc. of SPIE 13502, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

AI IN OPTICS AND PHOTONICS

- 13502 02 **Nonvolatile silicon photonics based on monolithic back-end-of-line integration phase-change-materials platform for optical neural networks [13502-3]**
- 13502 03 **Highly sensitive refractive index sensing based on SOI subwavelength grating microring resonators [13502-5]**
- 13502 04 **Research progress and development of key technologies based on microwave photonics of deep space tracking, telemetry, and command (TT&C) and communication system [13502-6]**
- 13502 05 **An instantaneous frequency measurement scheme based on carrier phase-shifted double sideband modulation [13502-7]**
- 13502 06 **Photonic generation of bandwidth-multiplying dual-chirp microwave waveforms with flexibly tunable central frequency [13502-9]**
- 13502 07 **Investigation of ultra-wideband channelization and down-conversion technology based on microwave photonics [13502-12]**
- 13502 08 **Research progress on silicon-based electro-optic phase shifters [13502-13]**
- 13502 09 **An integrated transmission quality perception method for radio over fiber link based on matched filtering [13502-14]**
- 13502 0A **Advancing microwave photonics: metalens integration for enhanced optical fiber expanders [13502-18]**
- 13502 0B **A microwave photonics receiving method for low SNR QAM signals based on optical pulse shaping [13502-19]**
- 13502 0C **Attention-guided polarization image fusion based on guided filtering [13502-20]**
- 13502 0D **Fiber-optic transmission of broadband wireless communication signals based on source and transmission integration [13502-23]**
- 13502 0E **Swept wavelength-to-time mapping for optical wavelength measurement [13502-25]**
- 13502 0F **Coherent dual-frequency microwave signal generation based on self-injection-locked optoelectronic oscillator [13502-26]**

- 13502 OG **Microwave frequency combs generation in harmonically mode-locked optoelectronic oscillator based on injection locking** [13502-27]
- 13502 OH **Design of a novel UTC-PD-array's structure for power combining above 110GHz** [13502-28]
- 13502 OI **Deep learning-based multispectral fusion for low-light color imaging** [13502-29]
- 13502 OJ **Exploring the photonic superiority: powerful computational expressiveness and trainability in optical computing** [13502-30]
- 13502 OK **Integrated optical matrix operator for biomedical image segmentation using deep residual U-Net** [13502-33]
- 13502 OL **Compensation of coherent optical communication systems using PSO-optimized SVM** [13502-35]
- 13502 OM **An active mode-locking optoelectronic oscillator based on a dual-drive Mach-Zehnder modulator** [13502-36]
- 13502 ON **Generation of dual-band microwave comb signals based on active mode-locked optoelectronic oscillators** [13502-37]
- 13502 OO **Experimental demonstration of MWP radar in urban background based on MWP generated signal and electronic receiving link** [13502-39]
- 13502 OP **Key technologies of ultra-wideband frequency-hopping anti-interference system based on microwave photons** [13502-40]
- 13502 OQ **High-accuracy active phase stabilization system based on microwave photonic phase-derived ranging** [13502-41]
- 13502 OR **Ultra-wideband microwave photonic circulator based on a thin-film lithium niobate electro-optic modulator** [13502-42]
- 13502 OS **Microcomb-based reconfigurable LFM waveform generation** [13502-43]
- 13502 OT **Research on target detection for microwave photonics holographic imaging perception system** [13502-44]
- 13502 OU **An adaptive delay calibration method for optical beamforming networks based on wideband sweep and windowed FFT spectrum analysis** [13502-45]
- 13502 OV **Microwave photonic direction finding with miniaturized antenna arrays: overcoming spatial constraints** [13502-48]
- 13502 OW **Integrated optical beam-forming network based on silicon arrayed waveguide grating** [13502-49]
- 13502 OX **Inverse-designed LNOI microring electric field sensor** [13502-51]

- 13502 0Y **Real-time processing of microwave communication signals based on a programmable integrated photonic processor** [13502-52]
- 13502 0Z **Measurement of propagation delay in fiber with dual microcombs at the sub-femtosecond level** [13502-53]
- 13502 10 **Photonic dual-band radar receiving processing technology based on a SLFM signal** [13502-56]
- 13502 11 **A method for dual-channel signal frequency recovery in optical frequency comb receiving system** [13502-57]
- 13502 12 **Assembly process of a Ritchey-Chretien (RC) optical system** [13502-59]
- 13502 13 **Research on phase consistency control technology in multichannel optical fiber links** [13502-61]
- 13502 14 **Study on divergence quantification of radio frequency orbital angular momentum beams through transmission properties** [13502-62]
- 13502 15 **Phase-aligned transmission of broadband microwave signals for multiple optical fiber links** [13502-63]
- 13502 16 **Fiber noise suppression for the low phase noise OEO** [13502-67]
