

# **Geotechnical Frontiers 2025**

## **Foundations, Retaining Structures, and Geosynthetics**

Selected Papers from Sessions of Geotechnical Frontiers 2025

Geotechnical Special Publication Number 364

Louisville, Kentucky, USA  
2-5 March 2025

### **Editors:**

**Melissa S. Beauregard**  
**Aaron S. Budge**

ISBN: 979-8-3313-1518-4

## *Deep Foundations*

|                                                                                                                                   |           |
|-----------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Friction Piles' Ultimate Capacity Using the Allowable Deformation Criteria .....</b>                                           | <b>1</b>  |
| Evelio N. Horta                                                                                                                   |           |
| <b>A Practical Guide to Estimating Input Parameters for Thermal Integrity<br/>Profiling Method .....</b>                          | <b>13</b> |
| Saeed Mahjoubi, Cheng Lin, and Min Sun                                                                                            |           |
| <b>A Comprehensive Pile Test Program for an LNG Project in Savannah, Georgia .....</b>                                            | <b>24</b> |
| Guoming Lin and Chao Zheng                                                                                                        |           |
| <b>Experimental Study of Silica Sand Crushing around Axially Loaded Model Piles .....</b>                                         | <b>37</b> |
| Daniel G. Fridman, Ruben D. Tovar-Valencia, Ayda C. Galvis-Castro,<br>Monica Prezzi, and Rodrigo Salgado                          |           |
| <b>Behavior of Advanced Densified Wood Pile under Lateral Loading:<br/>A Feasibility Study .....</b>                              | <b>47</b> |
| Hussein Alqrinawi, Hai Lin, Qinglin Wu, and Shengli Chen                                                                          |           |
| <b>Methodology to Numerically Predict Pile Driving-Induced<br/>Vibrations and Deformations .....</b>                              | <b>56</b> |
| Berk Turkel, Jorge E. Orozco-Herrera, and Luis G. Arboleda-Monsalve                                                               |           |
| <b>Applicability of Pile Driving Analyzer on Pile Seating on Rock .....</b>                                                       | <b>66</b> |
| Tanvir Ahmed, Soonkie Nam, and Xiaoming Yang                                                                                      |           |
| <b>Vertical Load Capacity of Recycled Plastic Pin Groups Subjected to<br/>Field Load Test .....</b>                               | <b>73</b> |
| Sehneela Sara Aurpa, S. M. Ashik Al Aziz, Md. Azijul Islam,<br>and Md. Sahadat Hossain                                            |           |
| <b>Modeling Auger Cast Pile Installation Effects on Group Capacities in<br/>Florida Soils .....</b>                               | <b>83</b> |
| Edgar C. Correa-Prada, Jorge E. Orozco-Herrera, Gyu-Beom Shin,<br>Luis G. Arboleda-Monsalve, Kevin R. Mackie, and Rodrigo Herrera |           |
| <b>Geotechnical Challenges for High-Rise Buildings in Mumbai, India .....</b>                                                     | <b>94</b> |
| Tanmoy Das, Rishav Baishya, K. Rakesh, Deepankar Choudhury,<br>and Haroon Rashid                                                  |           |

|                                                                                                                                 |            |
|---------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Developing Machine Learning Models to Generate the Load-Settlement Curves of Piles from Cone Penetration Test Data .....</b> | <b>104</b> |
| Murad Y. Abu-Farsakh and Mohammad Moontakim Shoaib                                                                              |            |
| <b>Evaluation of the Feasibility and Effectiveness of the Impact Hammer Installation of Deeply Embedded Ring Anchor .....</b>   | <b>114</b> |
| Song Qin, Junho Lee, and Charles P. Aubeny                                                                                      |            |
| <b>Effect of Piles Position on the Behavior of Model Rafts with Disconnected Settlement Reducing Piles in Sand .....</b>        | <b>124</b> |
| Ranadheer Sagi and Nihar Ranjan Patra                                                                                           |            |
| <b>Glacial Lake Sediments: A History of Supporting Major New York Structures .....</b>                                          | <b>134</b> |
| Tony Canale, Cheryl Moss, Peter Madarasz, and Greg Lucking                                                                      |            |
| <b>Effect of OCR on Torsional Capacity of Single Pile and Pile Groups .....</b>                                                 | <b>146</b> |
| Jayvardhan Kumar and Nihar Ranjan Patra                                                                                         |            |
| <b>Optimal Design of a Deeply Embedded Ring Anchor System in Sand.....</b>                                                      | <b>154</b> |
| Junho Lee and Charles P. Aubeny                                                                                                 |            |
| <b>Behavior and Capacity of Drilled Shafts in Sand Subjected to Lateral and Torsional Loading.....</b>                          | <b>164</b> |
| Matias R. Frediani and Miguel A. Pando                                                                                          |            |
| <b>Design and Construction of Large Diameter Drilled Shafts in Karst—A Case History.....</b>                                    | <b>174</b> |
| E. M. Smith                                                                                                                     |            |
| <i>Earth Retaining Structures</i>                                                                                               |            |
| <b>Influence of Anchor Type on Finite Element Modeling of a Tieback Bulkhead Wall.....</b>                                      | <b>190</b> |
| Yue Xu and WenJun Dong                                                                                                          |            |
| <b>Numerical Modeling of Contributing Factors to Rainfall-Induced Slope Failure: New Jersey Case Study .....</b>                | <b>200</b> |
| Prabhakar Khadka, Oladoyin Kolawole, Andrew C. Amenuvor, and Mawuko L. Y. Ankah                                                 |            |
| <b>Seismic Stability Analysis of Gravity Walls Considering Tension Cracks.....</b>                                              | <b>210</b> |
| D. H. Siddalingeshwara and Kaustav Chatterjee                                                                                   |            |
| <b>Effects of Deep Soil Mixing and Jet Grouting Construction Process on the Performance of Braced Excavations .....</b>         | <b>220</b> |
| Yuepeng Dong                                                                                                                    |            |

|                                                                                                                                 |            |
|---------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Installation Observations of Geosynthetic and Steel-Reinforced Segmental Concrete Panel MSE Walls: Lessons Learned .....</b> | <b>228</b> |
| Robert C. Johnson Jr., Robert Lozano, and Robert A. Gladstone                                                                   |            |
| <b>Assessment of External Stability of Waterfront Reinforced Soil Wall under the Influence of Seismic and Wave Loading.....</b> | <b>245</b> |
| Rahul Verma and Kaustav Chatterjee                                                                                              |            |
| <b>Mechanically Stabilized Earth Walls with a Horizontal Obstruction .....</b>                                                  | <b>256</b> |
| Md. Asad Ahmad and Antonio Bobet                                                                                                |            |
| <b>Long-Term Performance Monitoring of Recycled Plastic Pins for Settlement Control in MSE Wall Bases .....</b>                 | <b>266</b> |
| Faria Fahim Badhon, Md. Azijul Islam, Sehneela Sara Aurpa, and Sahadat Hossain                                                  |            |
| <b>Numerical Study on the Influence of Confining Wall Friction on a Full-Scale MSE Wall Laboratory Experiment.....</b>          | <b>277</b> |
| Chukwuma C. Okafor and J. Brian Anderson                                                                                        |            |
| <b>Influence of Gravity Forces on Building Response Adjacent to Excavations in Cohesive Soils .....</b>                         | <b>287</b> |
| A. Felipe Uribe-Henao, Luis G. Arboleda-Monsalve, and Kevin Mackie                                                              |            |

### *Geosynthetics*

|                                                                                                                                                     |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>The Role of Std-OIT versus HP-OIT-Detected Antioxidants in Stabilizing Geomembrane Base Liners in Various Geoenvironmental Application .....</b> | <b>296</b> |
| Mohamed S. Morsy, R. Kerry Rowe, and F. Abdelaal                                                                                                    |            |
| <b>Effect of Polymer Elution on Shear Strength of Interface between Smooth Geomembrane and Bentonite-Polymer Geosynthetic Clay Liner.....</b>       | <b>307</b> |
| Hanrui Zhao and Kuo Tian                                                                                                                            |            |
| <b>Evolution in Geosynthetics Starts with Utilizing Data Technology .....</b>                                                                       | <b>316</b> |
| Gregory Pignataro and Evan Bao                                                                                                                      |            |
| <b>Influence of the Use of High-Performance Geomembranes on the Environmental Impact of an MSW Landfill during Its Service Life.....</b>            | <b>323</b> |
| Beatriz Rodriguez and Borja Nantón                                                                                                                  |            |
| <b>Investigating Failure Modes of Geosynthetic-Reinforced Soil Mass .....</b>                                                                       | <b>333</b> |
| Thuy Vu, Thang Pham, Thuyet Nguyen, Andres Palma, and Tan Nguyen                                                                                    |            |
| <b>Large-Scale Dewatering: Learning from Lab Tests .....</b>                                                                                        | <b>345</b> |
| Z. B. Kiffle and S. K. Bhatia                                                                                                                       |            |

|                                                                                                                                                                             |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Performance Evaluation of Unpaved Roads Stabilized with Composite Geosynthetic Made of Recycled Plastic Geogrid and Nonwoven Geotextile .....</b>                        | <b>354</b> |
| Araz Hasheminezhad, Halil Ceylan, Sunghwan Kim, and Erol Tutumluer                                                                                                          |            |
| <b>Structural Contribution of Dynamic Modulus of Cellular Confinement System in Pavement Stabilization.....</b>                                                             | <b>365</b> |
| Arghya K. Chatterjee, Yitzchak Schary, and Sanat K. Pokharel                                                                                                                |            |
