SPIE

Volume 13553

Proceedings of SPIE 0277-786X, V. 13553

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Workshop on Electronics Communication Engineering (WECE 2024)*, edited by Ning Xu, Proc. of SPIE 13553, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

MODERN ELECTRONIC SYSTEMS AND SIGNAL ANALYSIS

- 13553 02 **Speed sensor interference source identification based on GWO-CFDP algorithm** [13553-10]
- 13553 03 **Design of ultra-wideband Vivaldi antenna for electromagnetic environment detection**
[13553-8]
- 13553 04 **A 32–37 GHz 6-bit CMOS active phase shifter with high accuracy and low insertion loss**
[13553-1]
- 13553 05 **Research and application of multi-scenario propagation model in network twinning
simulation** [13553-13]
- 13553 06 **Audio depression recognition based on deep learning** [13553-7]
- 13553 07 **Stacking ensemble models with integrated classifier for network anomaly-based intrusion
detection** [13553-19]
- 13553 08 **Cooperative control algorithms for traffic congestion mitigation and accident prevention in
multi-agent environments** [13553-12]
- 13553 09 **Application and optimization of intelligent traffic signal control and networked autonomous
vehicles in mixed traffic environments** [13553-11]

DETECTION MODELS AND MACHINE LEARNING ALGORITHMS IN DIGITAL IMAGE PROCESSING

- 13553 0A **ELS-YOLO: a lightweight algorithm for strip steel surface defect detection** [13553-18]
- 13553 0B **Research on adaptive lane line detection algorithm based on OpenCV-Python** [13553-20]
- 13553 0C **An improved CycleGAN model for low-light or exposure-light images preprocessing and its
application** [13553-14]
- 13553 0D **An efficient and lightweight image detection model based on YOLOv8 and its application**
[13553-15]
- 13553 0E **Extended multi-scale feature fusion and balanced generative adversarial network for
image inpainting under limited data** [13553-16]
- 13553 0F **Integrating IoT solutions for real-time attendance tracking with biometric systems** [13553-21]
