**Volume 13312**

Proceedings of SPIE, 1605-7422, V. 13312

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Microfluidics, BioMEMS, and Medical Microsystems XXIII*, edited by Bastian E. Rapp, Colin Dalton, Proc. of SPIE 13312, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v Conference Committee

## MICROFLUIDICS

---

- 13312 02 **Innovative liquid flat-jet system for microfluidic applications in vacuum** [13312-1]
- 13312 03 **Multidimensional laser induced fluorescent and microfluidic-valve-system-based combinational antibiotics susceptibility screening and sub-5 minute pathogen identification** [13312-4]

## MICROFABRICATION I

---

- 13312 05 **Mechanically induced subsurface crack channels for micro- and nanofluidics** [13312-7]

## OPTOFLUIDICS

---

- 13312 06 **3D printed microfluidics for cell analysis using digital holographic microscopy** [13312-10]

## MICROFABRICATION II

---

- 13312 07 **Advances in manufacturing next generation neurostimulation, cardiac rhythm management, and ultra-high-density electrophysiology mapping catheter electrodes via femtosecond laser hierarchical surface restructuring (Best Student Paper Award)** [13312-15]
- 13312 08 **Sticker molds and stencils for low-cost rapid-fabrication of polymer and textile-based biomedical devices** [13312-16]

## APPLICATIONS I

---

- 13312 09 **Dielectric waveguide ring resonator-based biosensor for dielectric fluid spectroscopy in the THz domain** [13312-17]
- 13312 0A **Rapid prototyping of microfluidic on-chip valves and pumps for biomedical applications** [13312-19]
- 13312 0B **Miniaturizable printed microfluidics chemiluminescence system for ATP detection in water** [13312-20]

---

#### MEDICAL DEVICES

---

- 13312 0C **Wire bonded solid metal microneedles: a versatile platform technology for transdermal drug delivery and biosensing (Invited Paper)** [13312-21]
- 13312 0D **A reusable, wireless, battery-free, noninvasive sweat cortisol sensor** [13312-22]
- 13312 0E **Battery-free wearable sensing system enhanced by machine learning for monitoring stress levels** [13312-23]

---

#### APPLICATIONS II

---

- 13312 0F **A 3D printed microfluidic worm sorting device** [13312-26]
- 13312 0G **OCT-based monitoring of artificial collagen membranes during mechanical stimulation** [13312-27]
- 13312 0H **Impedance-based biosensor for rapid detection and identification of *Salmonella* in turkey products** [13312-29]

---

#### APPLICATIONS III

---

- 13312 0I **Effect of flexible substrate Young's modulus on vibration transmission of microepidermal actuators** [13312-33]
- 13312 0J **Highly flexible, precise dielectrophoretic, AI image analysis enabled sorting of cells in a microfluidic system** [13312-25]
- 13312 0K **Towards on-chip integration of a silicon photonic microfluidic thermal flow rate sensor on a silicon-on-insulator process** [13312-9]
